1           THE CHAIRPERSON: Good afternoon. We  
2 would like to welcome you. The subcommittee on  
3 Crimes and Corrections is conducting this hearing,  
4 although the members of the full committee are  
5 always invited to attend.

6           And there will be several here. Some are  
7 here already. I will take the time to introduce  
8 them.

9           First of all, let me tell you that I am  
10 the chairman of the subcommittee. My name is  
11 Representative Jerry Birmelin, and my district is  
12 in Wayne and Pike Counties.

13           And I'll ask the other members who are  
14 here to introduce themselves and tell us where  
15 your district is.

16           REPRESENTATIVE WASHINGTON: Thank you.  
17 My name is Representative LeAnna Washington from  
18 Philadelphia County.

19           REPRESENTATIVE JAMES: Harold James,  
20 South Philadelphia.

21           THE CHAIRPERSON: And to my immediate  
22 right is Dave Bloomer. He is a member of the  
23 Judiciary staff. He is accompanied by another  
24 staff member Brandy who is seated on the couch to  
25 my far right.

1           And we have another or two members who  
2 are here, and both have left and, hopefully,  
3 will be back shortly. They are Representative Don  
4 Walko from the Pittsburg area and Representative  
5 Petrarca who is also from the Pittsburg area, but  
6 I'll introduce them as they make themselves  
7 present.

8           We have for you an agenda. There are  
9 some copies to my right near the doorway. If you  
10 are interested in knowing who is speaking and in  
11 what area, you may get those.

12           Also, the people who are testifying today  
13 are asked to present written testimony. Some of  
14 them we will have enough available for those of  
15 you seated in the audience who are not  
16 participants.

17           But if for some reason they don't have  
18 enough copies, if you will let us know your name  
19 and address before you leave, we can mail you  
20 copies.

21           So, we are going to get the meeting  
22 started. I want to pass along a couple of quick  
23 housekeeping chores. The first is the meeting is  
24 filled with people testifying who I will do my  
25 very best to keep within their time frames.

1           I will allow members of the Judicial  
2 Committee to ask questions of those who are  
3 testifying, if we have not exceeded the time  
4 allotment for those people.

5           If we have exceeded that time allotment,  
6 I will not allow for questions from the Judicial  
7 Committee people.

8           So, if you are willing, as a testifier,  
9 to answer questions and want to leave time for  
10 that, that's up to you. If you are, for instance,  
11 speaking from 1:30 to 1:50 and you go to 1:50,  
12 there won't be any questions because we will move  
13 on to our next witness.

14           We need to keep things moving along as  
15 quickly as possible. We have a lot of people who  
16 want to testify. And this meeting was set up in a  
17 way that it's only going to take hopefully about  
18 four hours or three hours.

19           We are going to try to keep things on  
20 schedule. With all of that being said, the first  
21 preliminary agenda item is the opening remarks by  
22 myself.

23           And to keeping with that spirit of being  
24 brief, I will now conclude my remarks and ask  
25 Representative Harold James -- Harold is my

1 Democratic co-part on the committee.

2 He and I have both served as subcommittee  
3 chairman for several years. And we work together  
4 quite well on different issues. And this meeting  
5 is essentially a request of Representative James,  
6 and we want to give him every opportunity to make  
7 an opening statement. Representative James.

8 REPRESENTATIVE JAMES: Thank you, Mr.  
9 Chairman. And in order to keep with the time  
10 frame, although, my remarks are not as brief as  
11 his.

12 Anyway, I'd like to thank both the  
13 chairman of the House Judicial Committee, and I'd  
14 like to thank my counterpart as subcommittee  
15 chairman, Jerry Birmelin, for authorizing these  
16 hearings to explore medical testing in  
17 Pennsylvania.

18 I hope we can use this forum to begin a  
19 full review of accusations that our prison inmates  
20 have been used for past medical tests and  
21 experiments.

22 As policymakers, it is our job to find  
23 out the true severity of this problem and to begin  
24 taking steps to correct the injustices.

25 We must develop legislative policies to

1 prevent any further atrocities against our  
2 citizens. And we must look at ways of making  
3 reparations to the victims and their families for  
4 the testing they had to endure while incarcerated.

5 As we examine these issues, we must  
6 determine whether any form of compensation --  
7 either by the state or the testing institutions --  
8 should be provided to test subjects who have  
9 ongoing medical problems as a direct result of the  
10 experiments.

11 Too many times our prisoners are treated  
12 like second-class citizens, even though many of  
13 them are forced into a life of crime because of  
14 economic and social barriers that prohibit them  
15 from achieving their goals.

16 Nonetheless, for their crimes they should  
17 be punished. But they should not be subject to  
18 such treatment as medical testing or random  
19 research experiments.

20 As Democratic chairman of the Judiciary's  
21 Subcommittee on Crime and Corrections, I want to  
22 work with committee members to make sure such  
23 atrocities do not occur again in Pennsylvania, as  
24 they already have in the past.

25 Published reports late last year

1 indicated that inmate testing at Philadelphia's  
2 former Holmesburg State Prison took place for more  
3 than two decades, beginning in the late '50s and  
4 running through the '70s.

5           The testing and experimentation --  
6 sponsored by the University of Pennsylvania and  
7 branches of the U.S. military -- exposed many  
8 inmates to severe gastrointestinal problems,  
9 visible body scars, and psychological problems  
10 that remain today.

11           Allen Hornblum's book, "Acres of Skin,"  
12 brought attention to the inhumane practices  
13 spurring public debate and scrutiny that is partly  
14 responsible for our hearings today.

15           Newspaper stories in the Philadelphia  
16 Inquirer and the Philadelphia Tribune further  
17 detailed the medical testing and experimentation  
18 of prison inmates, and a number of news shows  
19 across the country have featured similar stories.

20           It is unconscionable to think that these  
21 atrocities were done on human beings held in our  
22 state's prisons. And it would be unthinkable that  
23 all of us here would not want to set up safeguards  
24 to make sure that it never happens again.

25           I am encouraged by these discussions, and

1 I look forward to working with the committee to  
2 develop policies that will make sure such actions  
3 do not occur again.

4 Also, I would like to ask the chairman if  
5 he would allow us a week or two for those people  
6 that may want to submit written testimony.

7 THE CHAIRPERSON: That would be fine. If  
8 you have any additional testimony that you want  
9 the record to reflect, I would suggest you either  
10 leave your name and address with Dave Bloomer, who  
11 is my assistant here today, and we will see that  
12 you have that opportunity.

13 Generally the reports are not finished  
14 for a few weeks anyway, so I would say two weeks  
15 shouldn't be a problem to get that information to  
16 us.

17 Our first testifier this afternoon is  
18 going to be Martin Horn, who is the Secretary of  
19 Corrections for Pennsylvania. He is accompanied  
20 by Dr. Fred Maue, who is Chief Medical Director  
21 and Catherine McVey, the Director of Health Care  
22 Services for the Department of Corrections.

23 Gentlemen and lady, I welcome you.  
24 And, Mr. Horn, you have a prepared statement you  
25 would like to read, as I understand?

1 MR. HORN: Yes. I will try to summarize  
2 it in the issue of time. Thank you.

3 THE CHAIRPERSON: Let me interrupt you  
4 for just one second. I had indicated earlier that  
5 the agenda was on the table to the far right.  
6 Probably some of you went over there and found out  
7 it wasn't there. I apologize for that.

8 But they are there now. So, if you are  
9 interested in finding out who the speakers are  
10 throughout the afternoon, you may want to get over  
11 there and get that.

12 Sorry for the interruption, Mr. Horn.  
13 But I thought people would want to know who you  
14 are.

15 MR. HORN: Good afternoon, Mr. Chairman,  
16 Mr. James, members of the committee. You have  
17 asked us to speak to you today about the medical  
18 care the Department of Corrections provides to our  
19 inmates and our policy on medical experimentation.

20 With me today seated on my left are Dr.  
21 Fred Maue, Medical Director for the Department,  
22 and Catherine McVey on my right, who is the  
23 Director of Healthcare Services.

24 The Department of Corrections provides  
25 healthcare services to inmates which meets

1 community standards and also the standards of the  
2 American Correctional Association.

3 Our responsibility is to ensure that  
4 three basic healthcare rights of inmates are  
5 achieved.

6 First, inmates have the right to access  
7 to care. Second, they have the right to receive  
8 the care that is offered and, thirdly, they have  
9 the right to receive the benefit of professional  
10 or mental adjustment.

11 We manage our medical system through a  
12 central bureau of healthcare services, which is  
13 run by Dr. Maue on the clinical side and Ms. McVey  
14 on the administrative side.

15 We audit and manage this process through  
16 a very extensive quality improvement process,  
17 which I would be delighted to explain to you a bit  
18 later.

19 But what we attempt to do is monitor the  
20 quality of care by ensuring that certain basic  
21 practices, which are necessary to the delivery of  
22 good healthcare, are being achieved.

23 We see approximately 30,000 medical care  
24 treatment contacts per month. These include blood  
25 pressure checks, immunizations, dressing changes,

1 and so on.

2 The most common chronic care clinic is  
3 for hypertension, followed by asthma and diabetes.  
4 We also provide inmates with a significant amount  
5 of dental care, seeing an average of 5500 inmates  
6 each month through our dentists.

7 Obviously, and it's quite well known,  
8 that some contagious diseases are of particular  
9 concern to us in the administration of our  
10 prisons. And let me speak to those for a moment.

11 The number of inmates with AIDS has grown  
12 from 39 known cases in 1991 to 273 at the end of  
13 1998. However, at the same time, the number of  
14 deaths attributable to AIDS has declined from 35  
15 in 1995 to 23 last year.

16 We believe this is the result of new  
17 medication, which we now provide to inmates.  
18 Also, we believe that because of the beneficial  
19 treatment that is now available, additional  
20 inmates are identifying themselves and seeking  
21 treatment, seeking testing.

22 As a result, the number of inmates we  
23 have identified with HIV infection -- which I  
24 would distinguish from AIDS -- has increased from  
25 404 in 1995 to 704 in 1998.

1           I want to say this does not necessarily  
2 represent an increase in the number of inmates who  
3 have HIV infection, rather the number of inmates  
4 that we are aware of.

5           As you are aware, testing in Pennsylvania  
6 is not mandatory. The Department is increasingly  
7 concerned with the growing number of inmates  
8 identified with Hepatitis C.

9           Although Hepatitis C affects individuals  
10 from all walks of life, some patient populations  
11 present special problems. These include patients  
12 with HIV, inmates and patients on hemodialysis,  
13 and alcoholic liver disease. These are precisely  
14 the elements that our inmates present to us.

15           Hepatitis C has a long latency period.  
16 And untreated, may result in liver cancer or  
17 cirrhosis of the liver. Until recently, the  
18 effectiveness of treatment was very low.

19           Recent treatment advances offer the  
20 promise of improved response, but at very great  
21 cost.

22           The matter is complicated because most  
23 treatments have significant side effects,  
24 including psychosis, depression, and suicide.

25           Treatment contra-indications include

1 persons with previous psychosis or depression and  
2 persons with histories of drug abuse. As you can  
3 see, arriving at appropriate treatment strategy is  
4 going to be very difficult.

5 We are moving as quickly as we can to  
6 determine the best course of action. And we will  
7 ensure that our inmates receive the standard of  
8 care consistent with community practice.

9 The Department has had great success  
10 managing containment of tuberculosis through our  
11 aggressive testing and treatment protocol.

12 In the years 1995 through 1997, we had  
13 three active cases. Last year, we had none.

14 Last year, the Department implemented the  
15 statutorily mandated medical services co-payment  
16 requirement for inmates.

17 Inmates are charged \$2 per sick call  
18 visit, but they are not charged for follow-up  
19 visits, chronic disease care, infirmary, or  
20 long-term care or emergency services.

21 We have seen a reduction of 48 percent in  
22 inmates signing up for sick call during the first  
23 six months of medical co-pay.

24 This reduction in sick call attendance  
25 has allowed us to increase the number of scheduled

1 medical appointments. It has also allowed staff  
2 to devote more time to help education and  
3 prevention activities.

4 We believe that co-pay has achieved its  
5 intent. It has separated inmates with medical  
6 conditions needing care from those with minor  
7 complaints.

8 Our cost of inmate healthcare per year is  
9 \$3,464 annually. This includes medical, mental  
10 health, and dental care as well as  
11 pharmaceuticals.

12 It is important to note that our inmates  
13 come to us medically compromised as a result of  
14 their previous lifestyle. Therefore, it is  
15 necessary for the Department to offer a broad  
16 spectrum of healthcare services.

17 We provide inmates with all medically  
18 necessary care that is essential to life and  
19 health, including chronic care clinics, specialty  
20 consultations, infectious disease management and  
21 immunizations, hospice care, and renal dialysis.

22 There are also limits to the healthcare  
23 that is provided. We do not allow cosmetic  
24 surgery, sterilization, biofeedback,  
25 dental/cosmetic care, and chiropractic services.

1           In 1996, we established a long-term care  
2 facility at Laurel Highlands. This institution is  
3 intended to handle those inmates who are elderly  
4 and disabled.

5           And today, approximately 125 inmates are  
6 receiving nursing care at that facility. Today,  
7 we have 44 inmates receiving renal dialysis at SCI  
8 Laurel Highlands and SCI Graterford in  
9 state-of-the-art facilities.

10           Last year, the Department initiated the  
11 use of telemedicine. The provision of medical  
12 care through video conferencing allows for  
13 audio/video and data collection and transmission  
14 of information between an inmate and a physician  
15 located at a base site.

16           To date, we have conducted 1,028  
17 consultations primarily in the areas of  
18 psychiatry, dermatology, and infectious diseases.

19           Sixteen of our institutions are now  
20 equipped for telemedicine, two more are on the  
21 way. We have seen numerous advantages with this  
22 tool, including a decrease in the cost of  
23 consultation services, increased access to  
24 appropriate specialized care and the elimination  
25 of security risks and manpower costs associated

1 with transporting inmates who otherwise would need  
2 to be taken to outside appointments.

3 We believe when all telemedicine programs  
4 are operational, the state will realize the  
5 savings of approximately half a million dollars a  
6 year.

7 Finally, with respect to medical  
8 experiments involving inmates, the Department of  
9 Corrections' policy expressly prohibits the use or  
10 employment of inmates as subjects in any medical,  
11 pharmaceutical, or cosmetic experiments or  
12 testing.

13 This has been our longstanding policy.  
14 I would note this policy does not constitute an  
15 automatic ban on the use of pharmaceuticals and  
16 other medical protocols that, although technically  
17 classified as experimental or under testing, are  
18 generally accepted by the medical community for  
19 the treatment of diseases such as HIV and AIDS.

20 Our position is consistent with the  
21 American Correctional Association standard on  
22 inmate participation in research. Quite simply,  
23 to allow experimentation would jeopardize our ACA  
24 accreditation.

25 In addition, any requests from legitimate

1 research, treatment, or medical personnel designed  
2 to evaluate the effectiveness of generally  
3 accepted medical practices or procedures are  
4 accessed by our Medical Practice Review Committee.  
5 In practice, this committee has not been activated  
6 in recent years for this purpose.

7 The Department's policy on medical  
8 experimentation respects the belief that inmates  
9 are not truly free to give consent due to the  
10 inherently coercive environment of prisons.

11 And I might add that the experiments  
12 reported on in Hornblum's book took place in the  
13 Philadelphia Prison System, not in the  
14 Pennsylvania State Prisons.

15 And so while I am happy to discuss the  
16 issue with you today, I don't believe that there  
17 is any record of these types of activities  
18 occurring during the last 50 or so years within  
19 Pennsylvania State Prisons.

20 This concludes my presentation. I would  
21 be happy to answer any questions you might have.

22 THE CHAIRPERSON: Thank you, before we  
23 give the members an opportunity to ask questions,  
24 I want to introduce two members who were not here  
25 when we began.

1           To my right, is Representative Don Walko  
2 from Allegheny County. And to my far, far right  
3 sitting on the couch is Representative Joe  
4 Petrarca.

5           Are you from Allegheny County?

6           REPRESENTATIVE PETRARCA: Westmoreland.

7           THE CHAIRPERSON: Westmoreland. Just to  
8 the south. We want to thank the members for being  
9 here. If other members come throughout the course  
10 of this meeting, I will do my best to introduce  
11 them and let you know who they are.

12           The first person that I am going to give  
13 the opportunity to ask questions is Representative  
14 James. And before I do that, for the benefit of  
15 Representative Walko and Petrarca, I will restate  
16 what I stated earlier.

17           As long as we are not passed the time for  
18 the next presenter, we will allow for questions.  
19 If we have reached that point where we are  
20 stepping on someone else's time, we will not be  
21 able to ask any questions.

22           So, that makes it incumbent on us to ask  
23 pertinent questions and get to the point. And  
24 with that having been said, I will ask  
25 Representative James if he has any questions.

1           REPRESENTATIVE JAMES: Yes, Mr. Chairman.  
2 Thank you. Thank you also for your testimony.  
3 And I stand to be corrected. I did call  
4 Holmesburg a state institution.

5           But I understand there were inmates there  
6 in the county prison doing state time and vice  
7 versa. But, of course, no reflection on you  
8 because you weren't here at the time.

9           But anyway, I see that you say that in  
10 order for any request from any legitimate agency  
11 that wants to do any testing now, they would have  
12 to go through a committee you have set up or that  
13 is set up under the regulations now?

14          MR. HORN: Yes. That's for any type of  
15 research. Not just medical. Academic,  
16 sociological research, for example. Any academic  
17 researcher who wants to do studies has to go  
18 through our committee.

19          REPRESENTATIVE JAMES: Now, you said a  
20 committee has not been active in a year. Who  
21 makes up the committee or when is it active? Or  
22 how long has it been inactive?

23          MR. HORN: I can't, offhand, tell you who  
24 is appointed. But this particular committee is a  
25 committee that would review any requests for

1 pharmaceutical or the cosmetic testing.

2 And the reason it hasn't been activated  
3 is because our policy prohibits that there has  
4 been no need. So, our answer is, no, in all  
5 cases.

6 REPRESENTATIVE JAMES: So there's no  
7 regulations except for this committee. So if we  
8 were to initiate or to put in regulations or some  
9 kind of law, policies, that would not change  
10 anything that you are doing now?

11 MR. HORN: No. It would not be  
12 inconsistent with our practice or what we believe  
13 to be good policy.

14 REPRESENTATIVE JAMES: Thank you.

15 THE CHAIRPERSON: Representative  
16 Washington.

17 REPRESENTATIVE WASHINGTON: Secretary  
18 Horn, my question is that because Holmesburg was a  
19 county facility that some guys back in the '40s  
20 and '50s were doing state time, is it a  
21 possibility they could have got caught in an  
22 experiment through that process?

23 MR. HORN: Yes. I am not entirely  
24 comfortable with that expression, state time. I  
25 know it's a term of art that is commonly used.

1 The law in Pennsylvania says that when an  
2 individual receives a sentence with a maximum term  
3 of more than two years, that individual should be  
4 sentenced to state prison.

5 However, the law says that if the maximum  
6 term does not exceed five years, the Common Pleas  
7 Court Judge may elect to direct the time be served  
8 in the county prison.

9 And that is a matter of discretion. And  
10 judges have a variety of reasons for imposing  
11 those sentences. Persons who are so sentenced,  
12 are often referred to as serving state time.

13 So, it is certainly true that people who  
14 have received those sentences were serving time in  
15 the Philadelphia County Prison, and that does not  
16 make them state inmates.

17 REPRESENTATIVE WASHINGTON: But that's  
18 not what I asked you. What I asked you is, is it  
19 a possibility that those guys who were serving  
20 their time -- I am going to phrase it differently  
21 -- in a county facility could have got caught up  
22 in some testing that was being taking place in a  
23 county facility?

24 Is it possible?

25 MR. HORN: Sure.

1           REPRESENTATIVE WASHINGTON: That's it.

2 Thank you.

3           THE CHAIRPERSON: Representative Walko.

4           REPRESENTATIVE WALKO: Thank you, Mr.  
5 Chairman. This is not really in line with the  
6 main purpose of the hearing. But I was curious  
7 what the cost of healthcare per inmate at Laurel  
8 Highland was?

9           MR. HORN: Offhand, I don't know, but  
10 it's substantially higher. In fact, our annual  
11 cost per inmate -- let me put it in -- I don't  
12 have it broken down. I can get that for you.

13           Our average cost per inmate, across all  
14 of our institutions, is about \$23,000 per year.  
15 The cost to care for an inmate of Laurel Highland  
16 this year is \$77,000 per year.

17           Now, there is several reasons for that.  
18 One is that the facility is still in the process  
19 of -- and I think if you visited, you know -- of  
20 being opened.

21           It has not reach its fullest. Its  
22 capacity will be 1300 inmates. Today it houses  
23 about 400. So, to the extent that you achieve  
24 economies of scale, we haven't reached that  
25 operating point yet.

1           Nonetheless, because we have inmates --  
2           and I think Chairman Birmelin of the committee has  
3           visited Laurel Highlands?

4           THE CHAIRPERSON: No, I have not.

5           MR. HORN: You will see that we have  
6           inmates who are bedridden, inmates who are  
7           wheelchair bound. And we deliver a very, very  
8           intensive level of nursing care.

9           We have inmates there who present demands  
10          for cardiac care and advanced cancer treatment and  
11          so on, which tends to run the cost. We can find  
12          that, I think.

13          I think the other thing that it bears  
14          mentioning, Mr. Walko, is that we do not pay for  
15          inmate care on an indemnity basis.

16          Our inmate healthcare basically is more  
17          of a managed care model. It is a decapitated  
18          model. We enter into contracts with medical care  
19          providers who are bound by contract to provide the  
20          care at a cost per inmate.

21          In other words, they bid to provide care  
22          at a facility at a fixed price. And they are then  
23          responsible for serving all the inmates. And as  
24          with any other H.M.O. or managed care endeavor,  
25          they are calculating that a larger number of

1 inmates will not require the level of care that  
2 they are being paid to offset those who require  
3 care at a much higher rate.

4 So, we never get a bill for \$100,000 for  
5 an individual inmate. The average across all  
6 inmates is the \$3,464 per year. That contains  
7 within it the factor for those inmates who require  
8 the higher level of care such as those at Laurel  
9 Highlands or those, for example, at Graterford who  
10 are receiving renal dialysis.

11 We spread the cost and the risk across  
12 the entire pool.

13 REPRESENTATIVE Walko: With regard to the  
14 H.M.O. making decisions or the contractor, if a  
15 contractor makes a decision not to give a certain  
16 amount of treatment, but an inmate feels or some  
17 family member feels that such treatment should be  
18 given, what would the family or the inmate do to  
19 overrule or modify the contractor's determination?

20 MR. HORN: First of all, we have a  
21 grievance system within the Department. But I  
22 think the better answer is to tell you that that's  
23 why I have Dr. Maue.

24 Dr. Maue is our medical director. And  
25 I'll allow him to speak to that. But he reviews

1 all complaints that our contracted member  
2 providers are not providing adequate medical care.  
3 And I'll let him address that question.

4 DR. MAUE: We frequently get inquiries  
5 from families and inmates themselves regarding the  
6 care that they are getting. And we investigate  
7 each complaint with the appropriate institution  
8 that they are residing in.

9 And we call the healthcare administrator  
10 there. We ask them to investigate the complaint.  
11 The healthcare administrator is employed by the  
12 prison.

13 So, they are one of our DOC employees.  
14 And they investigate the quality of care and  
15 decide if the medical provider is providing the  
16 care that is supposed to be provided.

17 Also, our quality improvement program  
18 mandates that all of certain kinds of disorders be  
19 treated in a consistent fashion across the state,  
20 such as hypertension or diabetes or heart disease.

21 So, we have monitored that Q.I. program  
22 at each facility to make sure that all of those  
23 disorders are being cared for in a manner that's  
24 consistent with our medical policies.

25 REPRESENTATIVE WALKO: Thank you, doctor.

1           MR. HORN:  If I may, I would like to ask  
2  Ms. McVey to describe our quality assurance  
3  program to you.

4           MS. MCVEY:  The quality improvement  
5  program is really a team concept where our central  
6  staff works with the institutional staff to do  
7  monthly monitoring.

8           We randomly select our vendors in each  
9  institution.  And we have 13 different quality  
10 improvement monitors that we use.  This ensures  
11 that the inmates who we are randomly selecting, we  
12 review their medical records to determine that the  
13 appropriate clinically needed care is given.

14          We then work with the institutions when  
15 we find that there are problems to take corrective  
16 action.  I think at the heart of the matter of  
17 quality improvement is prospective rather an  
18 reactive in nature.

19          And that means that we are constantly  
20 striving to improve for the future, so that we are  
21 repeatedly upgrading the quality of our program  
22 and care.

23          REPRESENTATIVE WALKO:  Thank you.

24          THE CHAIRPERSON:  Thank you, secretary  
25 and Dr. Maue and Ms. McVey, we appreciate you

1 coming and sharing with us. Our next testifier is  
2 Mr. Angus Love who is a member of the Board of  
3 Directors of the Pennsylvania Prison Society.

4 THE CHAIRPERSON: Mr. Love, do you have  
5 printed transcripts of our testimony?

6 MR. LOVE: Chairman Birmelin, I thank you  
7 for the opportunity to testify here today on  
8 behalf of the Pennsylvania Prison Society  
9 regarding a variety of concerns about the delivery  
10 of medical services to the inmate population in  
11 the Pennsylvania Department of Corrections.

12 The Prison Society was founded in 1787 by  
13 Dr. Benjamin Rush and several other prominent  
14 members of our community, including Benjamin  
15 Franklin. We are the oldest prison reform  
16 organization in the United States.

17 We are empowered by our Commonwealth with  
18 official visitor status in Pennsylvania's prisons  
19 and jails.

20 I am also the Executive Director of the  
21 Pennsylvania Institutional Law Project, which  
22 provides civil legal services to institutionalized  
23 individuals in our Commonwealth.

24 Any discussion regarding medical issues  
25 in prison context will involve a variety of

1 different perspectives. Prison officials are  
2 primarily concerned about custody and control.  
3 Health authorities are focusing on disease  
4 prevention and management. Civil libertarians and  
5 advocates address issues from the perspective of  
6 individual rights.

7           Thus, there can be much confusion and  
8 misunderstanding inherent in such a discussion.  
9 Despite the varying viewpoints, I hope that we can  
10 all agree that issues of public health affect not  
11 only the inmates but the staff and the general  
12 public as well. This is especially true regarding  
13 communicable diseases that do not recognize prison  
14 walls or prison uniforms.

15           Epidemics are essentially the same inside  
16 the prison as they are in our communities from  
17 which the inmates come and to which, for the most  
18 part, they will one day return.

19           Each year the Pennsylvania Prison Society  
20 and the Pennsylvania Institutional Law Project  
21 receive thousands of inquiries from inmates housed  
22 in the Pennsylvania DOC system.

23           A large number of these inquiries involve  
24 medical issues. Families are also a regular  
25 source of complaints regarding similar issues. We

1 come to this Committee as advocates for sound  
2 public health policy within the correctional  
3 context.

4 We qualify our remarks by recognizing  
5 that we are not prison correctional experts nor  
6 are we medical professionals.

7 Prison populations are often  
8 characterized by healthcare professionals as  
9 "sick" populations. The term "sick" refers to the  
10 fact that they have generally received poor  
11 healthcare prior to their incarceration.

12 They are often from low-income  
13 backgrounds, with limited access to public health,  
14 including prevention such as regular check-ups,  
15 vaccinations, and early detection systems.

16 Significant risk factors for  
17 imprisonment, such as poverty, intravenous drug  
18 use and race correlate with the exposure to the  
19 leading communicable disease risk factors,  
20 especially Human Immunodeficiency Virus (HIV),  
21 Tuberculosis, and Hepatitis.

22 These factors are further complicated by  
23 the fact that prison life is based on the  
24 congregate living environment in a closed society.  
25 This heightens the danger of transmission between

1 the inhabitants of the closed society. Prisons  
2 can serve as a breeding ground for communicable  
3 diseases.

4 The Pennsylvania Department of  
5 Corrections is to be commended for their  
6 recognition of these concerns and for their  
7 ability to respond in a positive way to the  
8 challenges presented to them by the inmate and  
9 advocacy communities.

10 A recent example of such was the  
11 litigation entitled Austin v. Lehman. Upon  
12 completion of the discovery phase in that case,  
13 including the inspection by various medical  
14 experts, the parties were able to reach a  
15 voluntary settlement agreement to upgrade the  
16 quality of healthcare in the system.

17 A number of improvements were agreed upon  
18 and implemented over the last several years. This  
19 included development of a prototypical staffing  
20 pattern for all institutions within the DOC  
21 system.

22 It further led to the development of a  
23 comprehensive statewide healthcare and medical  
24 policy modeled in scope and level of detail on the  
25 clinical and administrative guidelines as set

1       forth by the Centers for Disease Control in  
2       Atlanta, Georgia.

3                Protocols were developed for the  
4       management of chronic diseases such as HIV,  
5       diabetes, cardiovascular diseases, seizure  
6       disorders, and asthma.

7                The DOC adopted a comprehensive  
8       system-wide quality assurance program designed to  
9       assure the implementation of the aforementioned  
10      policies.

11              Negative pressure rooms were introduced  
12      to handle active TB patients. Special needs units  
13      and mental health units were added to several  
14      institutions.

15              The overall result was a significant  
16      improvement in the delivery of medical, dental,  
17      and mental health systems in our system. All  
18      persons involved in that effort are to be  
19      commended.

20              We are now presented with new challenges  
21      to the delivery of medical services. As we do not  
22      live in a static environment, new diseases, new  
23      treatments and new scientific breakthroughs are  
24      discovered regularly.

25              It is important we keep up with the

1 latest medical discoveries and advances. The two  
2 areas that we are receiving the most complaints  
3 about, and that we believe are in need of further  
4 examination, are Hepatitis and organ  
5 transplantation.

6 We qualify our remarks with an  
7 understanding that there have been new scientific  
8 discoveries in these areas everyday that include  
9 recognition of new types of Hepatitis and new  
10 treatments available for both the new and old  
11 types.

12 It is our hope that through a frank  
13 discussion of these issues we can keep current  
14 with these developments and provide  
15 state-of-the-art quality care to the inmate  
16 population in our prison system.

17 Until 1990, there were only two  
18 recognized strains of Hepatitis labeled A and B.  
19 At that time, an additional strain, given the  
20 title C, was developed. And subsequent to that,  
21 we have discovered several new strains.

22 With the recognition of the new strains  
23 have come new treatments, primarily through drug  
24 regimes. Incident rates of Hepatitis generally  
25 run higher in minority populations.

1           The African-American population has a  
2 rate of 3.2%; the Latino population, 2.1%; while  
3 Caucasians have a rate of 1.5%.

4           Hepatitis is contracted primarily through  
5 transmission of bodily fluids. Transmission is  
6 often accomplished in many of the same ways that  
7 HIV is transmitted, i.e., drug injections, needle  
8 sticks, transfusions, and unprotected sex.

9           Hepatitis B has been termed one hundred  
10 times more infectious than HIV due to the fact  
11 that the virus can live outside the body, unlike  
12 HIV, for up to a week.

13           The disease can be fatal. Hepatitis C  
14 alone accounts for 8-to 10,000 deaths per year.  
15 It is not an easily recognizable disease, nor is  
16 it easy to treat.

17           One can have Hepatitis but not be  
18 symptomatic. One can become symptomatic and then  
19 go into remission with the potential for  
20 reoccurrence.

21           Some individuals respond to treatment  
22 while others can be infected for the rest of their  
23 lives. Hepatitis primarily affects the liver and  
24 is the leading reason for liver transplants.

25           The offices of the Prison Society and

1 Institutional Law Project have received hundreds  
2 of inquiries regarding the treatment of Hepatitis.

3 We have interviewed these individuals,  
4 obtained their medical records, reviewed various  
5 grievance procedures, and have requested and  
6 received affidavits.

7 The most frequent complaints concern  
8 Hepatitis B and C. These complaints often include  
9 the failure to notify the affected individual for  
10 several years that they have contracted the  
11 disease.

12 They also complain that they are not  
13 getting state-of-the-art treatment once they have  
14 been informed of their infection.

15 There are also concerns regarding lack of  
16 uniform standards regarding the treatment of these  
17 diseases once they have been discovered and  
18 identified.

19 Additional concerns regard the  
20 availability of liver biopsies upon finding that  
21 one has been infected, the need for annual liver  
22 function tests, the use of the drug Interferon  
23 alone and in combination with the drug Ribavirin  
24 a/k/a Rebatrin.

25 We have heard several complaints that

1 individuals have been diagnosed with Hepatitis but  
2 have not been informed for up to five years.

3 Some of these folks have been released  
4 from prison and gone back to prison in the  
5 interim. We have heard complaints of liver biopsy  
6 tests that do not accompany the initial diagnosis  
7 of Hepatitis.

8 We have heard numerous complaints  
9 regarding the lack of the initial Interferon drug  
10 regime and the subsequent treatment for a period  
11 up to one year of the combination of  
12 Interferon/Ribavirin.

13 We also recognize that as recently as  
14 December 1998, a new combination drug Rebatrin has  
15 become available in the U.S. marketplace.

16 As we understand it, the Department of  
17 Corrections does not have a standardized protocol  
18 or policy for treatment of all forms of Hepatitis.

19 Inmates are being told, as I mentioned  
20 earlier today, Interferon treatments are being  
21 withheld due to their limited applicability and  
22 often severe side effects.

23 We are also cognizant of the fact that  
24 Interferon costs \$300 per dose and is administered  
25 three times per week for anywhere from three to

1 twelve months.

2           It is further our understanding that with  
3 regard to Hepatitis C, the Interferon treatments  
4 are effective in only 50% of the cases, with only  
5 one-half of those individuals suffering relapses.

6           Based on the information we have  
7 received, there appears to be an atmosphere of  
8 confusion and suspicion. It is our hope that  
9 through the testimony today and with appropriate  
10 follow-up, we can reduce that confusion and  
11 educate all parties regarding the particulars of  
12 Hepatitis.

13           If there is not already a standard policy  
14 or protocol for all forms of Hepatitis, it is our  
15 belief that we are in dire need of such. We  
16 welcome any response from the Department to these  
17 issues and are willing to meet with them in order  
18 to clear up any misunderstandings that currently  
19 exist and to work towards a better understanding  
20 and appropriate response to our concerns.

21           The second issue that we are here today  
22 to discuss involves organ transplantation. This  
23 is an issue that has been brought to our attention  
24 due to the incredible advances of modern medicine.

25           It is not long ago that I recall the

1 first heart transplant. Nowadays, transplants of  
2 kidneys, livers, hearts, and various other organs  
3 are done on a regular basis.

4 We commend the donor option programs that  
5 have encouraged the supply for organs for those in  
6 desperate need. We recognize that there are  
7 ethical issues involved in transplantation that go  
8 far beyond prison walls.

9 We do not pretend to have all the answers  
10 in this or any other area, but wish to let this  
11 Committee know of our concerns.

12 These concerns are again based on  
13 numerous inquiries to our offices from inmates and  
14 family members alike. Once again, we find a lack  
15 of protocols and procedures in this area.

16 It is our hope that we can develop  
17 uniform standards for the decision-making process  
18 with regard to transplantation. The most  
19 frequently mentioned concern involves treatment  
20 for kidney failure.

21 Prior to 1995, the DOC utilized dialysis  
22 as the mode of treatment for kidney failure.  
23 Individuals housed within the system routinely  
24 traveled to outside hospitals, usually three times  
25 per week to receive their dialysis treatment.

1           At that time, the Department of  
2           Corrections decided to open the Renal Treatment  
3           Unit at Graterford and move all the dialysis  
4           patients to that facility.

5           Initially 40 to 50 people were housed in  
6           a special area called the Renal Treatment Unit and  
7           received their dialysis in the adjacent area  
8           housed with the prison infirmary.

9           Prior to 1995, individuals treated in  
10          outside hospitals were presented with the same  
11          options as other individuals would receive at said  
12          hospital.

13          This included the full range of what is  
14          known as modality choices. These include  
15          peritoneal dialysis, home dialysis, pre-care  
16          dialysis, and renal transplants.

17          Renal transplants are considered the  
18          treatment of choice for medically qualified  
19          individuals in outside hospitals.

20          Transplantation for young, otherwise  
21          healthy patients provides a significant advantage  
22          in survival and quality of life. These issues  
23          were recently addressed in litigation entitled  
24          Calhoun v. Horn.

25                 Dr. Joseph Bisordi, chairman of the

1 Medical Review Board for End-Stage Renal Dialysis  
2 Network No. 4 visited Graterford and submitted a  
3 report to the Court.

4 He testified that 80 to 90% of the  
5 patients on dialysis are eligible for renal  
6 transplants. The average cost of dialysis for one  
7 year is \$50,000. The cost of a transplant is  
8 \$100,000.

9 Four out of five renal transplants are  
10 successful. He indicated that there was no  
11 compelling medical or social reason for the  
12 failure to provide for renal transplants or the  
13 renal transplant option.

14 Financial incentives weigh in favor of  
15 such a transplant. Several individuals housed at  
16 Graterford have had renal transplants prior to the  
17 change in policy in 1995.

18 One individual had a family member  
19 willing to donate a kidney but was denied the  
20 opportunity. The private medical provider, in the  
21 person of Dr. Richard Freedman, acknowledged that  
22 the DOC practice excludes the transplant option.

23 Discovery failed to produce any written  
24 policy that addresses this issue. The only oral  
25 explanation offered was that the individuals were

1 inmates and, as such, would not receive  
2 transplants.

3 In light of the important ethical and  
4 cost issues involved, we urge the Department to  
5 re-evaluate their situation and come up with a  
6 policy/protocol that defines their position on  
7 this critical issue.

8 I would also like to briefly mention that  
9 the Prison Society also supports fully the efforts  
10 of the former inmates of Holmesburg Prison to seek  
11 compensation and some kind of justice in their  
12 quest for the experiments that were put upon them  
13 in the '40s, '50s, and '60s. Thank you.

14 THE CHAIRPERSON: Thank you, Mr. Love.  
15 I'll ask Representative James if he has any  
16 questions.

17 REPRESENTATIVE JAMES: Thank you, Mr.  
18 Chairman, and thank you for testifying. Is it my  
19 understanding, based on your testimony, that you  
20 are saying that inmates cannot receive an organ  
21 transplant?

22 MR. LOVE: That's my understanding.

23 REPRESENTATIVE JAMES: And that's a  
24 policy that you have determined as a policy by the  
25 Department of Corrections, but you haven't found

1 anything written?

2 MR. LOVE: It's an oral policy. I don't  
3 think it is written down. If it is, we haven't  
4 seen it.

5 REPRESENTATIVE JAMES: And if it is, is  
6 it not because their sentence or anything like  
7 that? Was that described to you because they were  
8 sentenced?

9 MR. LOVE: It just said because they were  
10 inmates.

11 REPRESENTATIVE JAMES: And you would like  
12 us as policymakers to look at that to see, if, in  
13 fact, that could be a policy that can be  
14 implemented?

15 MR. LOVE: I think so. It would actually  
16 save money, which is another reason to look at it.  
17 It improves quality of life for the individual and  
18 saves the Commonwealth money.

19 So, I can't see why it wouldn't be  
20 considered.

21 REPRESENTATIVE JAMES: The Commonwealth  
22 really understands about saving money. So maybe  
23 we can put it to them that way, maybe it can be  
24 implemented, if, in fact, it can save money.  
25 Because that's one thing that makes them look at

1 those policies. Thank you.

2 THE CHAIRPERSON: Representative  
3 Washington.

4 REPRESENTATIVE WASHINGTON: Thank you,  
5 Mr. Chairman. My question is, who would pay for  
6 -- if it would save money in the long run, but how  
7 would you do the security part?

8 Would it be done in a hospital  
9 environment? Would it be done outside the  
10 hospital?

11 MR. LOVE: Prior to '95, these  
12 individuals routinely went to the hospital three  
13 times a week. It was the same hospital I believe  
14 that did the transplant at that point in time.

15 REPRESENTATIVE WASHINGTON: And my second  
16 question is that when I was first elected in 1995,  
17 I had taken over a lot of the issues and  
18 corrections that Dave Richardson had been taking  
19 care of.

20 And I went to Graterford Prison to deal  
21 with the kidney dialysis unit. And I had a lot of  
22 issues at the time because of letters that I had  
23 received from inmates about their treatment and  
24 what wasn't right.

25 And not being a specialist in the area

1 myself, and I found out that a lot of people there  
2 were not doing their part as well.

3 Do you find that to be true?

4 MR. LOVE: Well, it is very complicated.  
5 It is very difficult when they went from the  
6 outside hospital to in-house. They did their best  
7 to improve the flow rates and dialysis, but there  
8 is a lot of factors that come into play.

9 Inmates have to be back on the block for  
10 the count. Some people need longer time on  
11 machines than others. It is a lot of  
12 transporting.

13 REPRESENTATIVE WASHINGTON: Some people  
14 weren't staying on the machines as long as they  
15 should?

16 MR. LOVE: That's true. It is a  
17 combination of a variety of factors.

18 REPRESENTATIVE WASHINGTON: So that means  
19 we could review and see if there could be some  
20 changes made that could bring that Department or  
21 that part of the treatment up to 1999 standards?

22 MR. LOVE: Absolutely.

23 REPRESENTATIVE WASHINGTON: Thank you.

24 THE CHAIRPERSON: Representative  
25 Petrarca.

1           REPRESENTATIVE PETRARCA: Thank you, Mr.  
2 Chairman. Thank you for being here, Mr. Love. I  
3 have a few quick questions. One, I guess  
4 generally, you call yourself a prison reform  
5 organization.

6           How is the care, in your opinion,  
7 generally regarding the medical, mental, and  
8 dental treatment of inmates?

9           MR. LOVE: I think it is comparable to  
10 most prison systems. I don't think it is as good  
11 as people in the outside world get.

12           REPRESENTATIVE PETRARCA: I was just  
13 thinking -- I don't know how many complaints there  
14 are in the system or how often you hear complaints  
15 about medical treatment.

16           Is there anyway to quantify that?

17           MR. LOVE: Well, we brought in national  
18 experts as part of the Austin litigation. And  
19 they identified certain areas where we were well  
20 behind. Tuberculosis was a good example. We were  
21 going with a policy that was well out of date.

22           But the Department, to their credit,  
23 recognized that and immediately implemented a new  
24 current state-of-art model developed by the Center  
25 for Disease Control, that included annual testing

1 for inmates and for guards and follow-up testing,  
2 sputum tests, x-rays, the drug regime that is  
3 necessary to contain the TB in its initial stages.

4 So, they brought themselves up-to-date.  
5 I think they are doing a decent job.

6 REPRESENTATIVE PETRARCA: My last  
7 question, I serve on the organ donation advisory  
8 board. And, I believe, I am still the only member  
9 -- I know I am of the House or Senate to be on  
10 that board appointed by the Governor.

11 I am very interested in what you have to  
12 say about organ donation. In fact, I would like  
13 to speak to the secretary about it at some point  
14 also.

15 I plan to do that. But I find it  
16 outrageous that persons do not even have that  
17 option available to them. I know that there are  
18 different concerns involved here.

19 But the whole idea that that option has  
20 been closed out for people, I think is outrageous.  
21 I would like to look into that, again as a member  
22 of that organ donation advisory board, and see if  
23 there is a policy and to see what exactly that  
24 policy is and go from there.

25 I thank you for your testimony.

1 MR. LOVE: It is very tricky. I was on a  
2 radio show. And somebody said, well, I would  
3 never want to give up an organ if I knew an inmate  
4 was going to get it.

5 And I said, well, what about, would you  
6 accept the organ if you knew it was from an  
7 inmate? And he said, certainly.

8 REPRESENTATIVE PETRARCA: I think we  
9 should do some investigative work with regards to  
10 that.

11 MR. LOVE: I would be happy to help out.

12 THE CHAIRPERSON: Representative  
13 Washington has a follow-up.

14 REPRESENTATIVE WASHINGTON: Thank you,  
15 Mr. Chairman. Whether or not the person who was  
16 denied the opportunity for the transplant, was  
17 that before or after the 1995 policy change?

18 MR. LOVE: That was after.

19 THE CHAIRPERSON: Thank you, Mr. Love,  
20 for your testimony. We appreciate you coming.

21 Our next testifier is Attorney Charles  
22 Artz from the Pennsylvania Academy of Family  
23 Physicians.

24 Is Attorney Artz here?

25 (No response.)

1 THE CHAIRPERSON: I will assume he is not  
2 here. We will skip over him and come back to him,  
3 perhaps if he comes back later. We will go to our  
4 next testifier who is not scheduled until 2:10,  
5 but hopefully he is here, and that is Dr. Allen  
6 Hornblum, the author of the book entitled "Acres  
7 of Skin". Mr. Hornblum, are you here?

8 Mr. Hornblum, in preparing for the  
9 meeting today, I was in Harrisburg and happened to  
10 go to a book store.

11 And had your book not cost so much, I  
12 probably would have bought it. But I figured you  
13 would probably give me an autographed copy.

14 MR. HORNBLUM: Well, if you walk out of  
15 here favorably, you can count on that.

16 THE CHAIRPERSON: We are only here to  
17 listen to you.

18 MR. HORNBLUM: That could be arranged.

19 THE CHAIRPERSON: We thank you for  
20 coming. And you have your testimony prepared for  
21 us. And if you would like to, you may read that.  
22 You have the 20 minute time slot that Mr. Artz was  
23 going to have.

24 MR. HORNBLUM: Thank you. Chairman  
25 Birmelin, Chairman James, and members of the

1 committee, thank you for giving me and others in  
2 this room an opportunity to address this issue.

3 Some may argue it is 25 years after the  
4 fact, but some of us would say better late than  
5 never. This document before you is not my  
6 testimony.

7 In talking to your staff, I decided that  
8 I would give you an overview of the issue based on  
9 a forthcoming article that I will have in a  
10 Pennsylvania History Journal.

11 You can peruse that at your leisure. So  
12 that you may better be prepared to ask myself and  
13 others some questions, what I thought I would do  
14 is illuminate some of the points of the Holmesburg  
15 story and that may foster further discussion on  
16 this.

17 Basically, the story begins in the early  
18 '50s, approximately 1951, where Holmesburg Prison,  
19 over the course of the next 25 years probably  
20 became the largest human experimentation factory  
21 in America.

22 Over the course of the '50s, rudimentary  
23 dermatological tests that were being performed by  
24 a professor of the dermatology department of  
25 University of Pennsylvania started to use

1 Holmesburg prisoners as the raw materials for  
2 experimentation.

3 This was not anything that was new in  
4 post-war America. In fact, throughout the history  
5 of the 20th century, prisoners have been used as  
6 test subjects.

7 You can go back to 1915 where prisoners  
8 at Rankin Prison Farm in Mississippi were used in  
9 paleography experiments, 1934 Colorado Prisoners  
10 were used in tuberculosis experiments.

11 From 1918 to 1922, hundreds of prisoners  
12 at San Quentin were used for testicular  
13 transplantation experiments.

14 What really kicked off the drive towards  
15 human experimentation, as well as use of  
16 prisoners, was the second World War. Hundreds,  
17 maybe thousands of men, particularly in the  
18 Pacific theater were falling prey, not so much to  
19 Japanese bullets or bombs, but to malaria.

20 And it was considered a major part of the  
21 war effort if American doctors could come up with  
22 a treatment or a cure for malaria. They initiated  
23 a program in four prisons, the best known being  
24 Stateville in Illinois and Atlanta Federal  
25 Penitentiary where prisoners were laid out in

1 hospital wards and allowed to have C.C. flies and  
2 mosquitoes bite them. And that went on throughout  
3 the war and actually for a decade or more after  
4 that.

5 But where many prisoners were  
6 incorporated in various assets of the war effort  
7 to solve various blood transfusion problems,  
8 communicable disease problems, it continued and  
9 extended after the war was over.

10 The pharmaceutical companies during the  
11 post war period were growing by leaps and bounds.  
12 And one of the key things they needed was the raw  
13 material for the experiments, that being the test  
14 subjects.

15 Also, at this time as you were probably  
16 aware that they were using retarded children,  
17 retarded adults, hospitalized patients, senior  
18 citizens.

19 The most famous example is obviously the  
20 Tuskegee syphilis study, which ran for 40 years  
21 starting in 1932 and ending in 1972. And I should  
22 point out that over the course of those four  
23 decades, there were numerous articles written in  
24 medical journals about that experiment.

25 But no one ever blew the whistle on it in

1 the medical community. It took a reporter from  
2 the New York Times to get tipped off by and expose  
3 it and that contributed to the ending of  
4 experimentation in this country as it was taking  
5 place over the '40s, '50s, '60s, and '70s.

6 Getting back to Philadelphia, in 1951  
7 Holmesburg started to be used as a test site. And  
8 over the years, it expanded so that just about  
9 every item in your medicine cabinet would have  
10 been tested at Holmesburg Prison.

11 They were using the men for fairly  
12 innocuous experiments -- hair dyes, skin creams,  
13 eye shadow, toothpaste, mouthwash, athletes' foot  
14 medication. All sorts of items for the commercial  
15 market were being tested on prisoners.

16 But in addition to that, they also used  
17 them for more dangerous experiments such as Phase  
18 1 pharmaceutical testing.

19 Phase 1 testing is the first phase of the  
20 process after these chemicals -- these drugs --  
21 have been given to animals. It's the most  
22 dangerous phase for humans.

23 And that is what the pharmaceutical  
24 companies came to Philadelphia for. Because the  
25 doctor and the University had a cheap and

1 available test population.

2 I should point out that there were many,  
3 many states across the country -- the majority of  
4 states had at least one or two prisons that were  
5 being used for experimentation.

6 Unfortunately, Pennsylvania had more than  
7 any other state. Where most states had one or  
8 two, Pennsylvania had nine such sites.

9 These would be the county prisons at  
10 Lancaster, Northampton, Berks County, Chester  
11 County, Delaware County, Philadelphia, Bucks  
12 County, all throughout the state or particularly  
13 in southeastern Pennsylvania probably because of  
14 the great number of medical schools and  
15 pharmaceutical companies that are in this area as  
16 well as Jersey.

17 They all knew about the experimentation  
18 at Holmesburg, and they all came because they  
19 could get subjects tested there cheaper and more  
20 easily than anyplace else.

21 To point out how some of these  
22 experiments went beyond Phase 1 studies, prisoners  
23 were also used to test dioxin -- one of the most  
24 carcinogenic and dangerous chemicals, substances,  
25 known to man -- was tested here in 1964.

1           That basically originated after Dow  
2 Chemical in Midland, Michigan, had a problem with  
3 one of its factory sites where some of the men on  
4 the work line were coming down with chloracne.  
5 They had to shut the plant and figure out very  
6 quickly what in their herbicide processing was  
7 causing this alone.

8           Now, of course, there are prisons in  
9 Michigan. There are great universities in  
10 Michigan. But they still decided to come to  
11 Pennsylvania and they decided to come to  
12 Philadelphia because we had already developed a  
13 representation in the field as a site where  
14 dangerous chemicals and substances could be tested  
15 without question.

16           Also, you have R.J. Reynolds coming from  
17 North Carolina to test smoking and its impact in  
18 causing cancer. It was felt in also the mid '60s  
19 that there was a possibility that cancer could  
20 affect the body's level of tryptophan and that  
21 would lead to bladder cancer.

22           They also have prisons in North Carolina,  
23 fine universities. But they came to Pennsylvania  
24 to test their experiments with cigarettes on men  
25 in Philadelphia.

1           There was also the public sector that  
2 came to Philadelphia. You had the U.S. Army  
3 coming in in 1963. They wanted to test chemical  
4 warfare agents on individuals.

5           They and the CIA have been doing this for  
6 many years. And they had put aside the use of LSD  
7 for the most part and wanted to expand into some  
8 other chemicals.

9           But when they started using very strong  
10 dosages of atropine, denzolute, it started to lay  
11 out the soldiers for an extended period of time.

12           As would arsenals, a small base in  
13 Maryland where they would do the chemical  
14 experiments, they realized that they needed  
15 another site.

16           Where did they come? They came to  
17 Philadelphia because they knew that this operation  
18 was taking place here.

19           That continued over the course of the  
20 '60s into the '70s. The CIA piggy-backed on those  
21 same experiments. In the early '70s -- and what I  
22 am trying to point out is, that even though the  
23 general public and maybe some politicians and  
24 elected officials and some journalists did not  
25 know about it, the people in the business of

1 testing other people knew about Holmesburg.

2 It was a well-known commodity where  
3 individuals could be used and abused freely.  
4 I would like to say that this was a very  
5 utilitarian, elitist operation.

6 In my opinion, they were not using  
7 Richards and Dolworth for the Democratic members  
8 of council. They were not using Eugene Ormandy  
9 and the string section of the Philadelphia  
10 Orchestra.

11 They went to the other end of the  
12 socio-spectrum and were using throw-away people.  
13 They were using people who were incarcerated.

14 These individuals did not do it because  
15 they were so interested in altruistic motives or  
16 patriotism or advancing science.

17 These were basically unsophisticated,  
18 uneducated, desperate men and women who needed  
19 money. And they did it for the money. If you  
20 were lucky enough to get a job in the Philadelphia  
21 Prisons back in the '50s and '60s, you may top out  
22 at 15 cents a day.

23 If you decided to be a guinea pig, you  
24 could make a buck a day, a buck and a half, \$2 a  
25 days. It was wages. So, individuals in many

1 cases put aside their concerns about their health,  
2 the expectations of what may happen for a number  
3 of reasons.

4 Most of all, they needed the money. But  
5 they also trusted these articulate, knowledgeable  
6 men in white lab coats who said that this would  
7 not effect them, this would not hurt them. If  
8 there was any harmful effects, they would be there  
9 to take care of them.

10 And this ran from the early '50s until  
11 1974 when it was terminated. I should also point  
12 out that although I started my book in 1951, I  
13 have been corrected.

14 Amongst the many pieces of correspondence  
15 I have received about the book, I received a call  
16 at Temple one day from an individual specifically  
17 asking why I started in '51.

18 And I told him, to my knowledge, that's  
19 when it started. He said, that is not true at  
20 all. He said he worked in the Philadelphia Prison  
21 in the 1940's and was working for the University  
22 of Pennsylvania's industrial toxicology  
23 department.

24 And they were putting chemicals on  
25 prisoners back during the second World War. And

1 he said, in fact, when Willie Sutton went over the  
2 wall in Holmesburg Prison in the late '40s, he  
3 went out with a patch on his back that this  
4 gentleman had put on there because he was a test  
5 subject.

6 So, it goes back even further than I  
7 thought. But to give you an idea of the  
8 dimensions, Holmesburg Prison, basically, had  
9 anywhere from 1200 and 1400 individuals at any  
10 given time. 75 to 90 percent of the people in the  
11 prison were on these experiments.

12 All were looking for good money and  
13 hopefully not being injured in the process. So  
14 maybe what I will do is stop there and entertain  
15 any questions that you may have.

16 THE CHAIRPERSON: Thank you. We  
17 appreciate you coming here today, and I am looking  
18 forward to reading the book. Representative  
19 James, do you have any questions?

20 REPRESENTATIVE JAMES: Thank you, Mr.  
21 Chairman. Again, to begin, I want to thank you as  
22 chair committee for helping to authorize these  
23 hearings and thank you, Allen, for the commitment  
24 and dedication you had in doing the book and doing  
25 the research to come out with the book to bring

1 out these atrocities.

2 As a result of the book and a result of  
3 what you have seen, what do you think that we as  
4 policymakers need to do?

5 MR. HORNBLUM: I think first and foremost  
6 you have to be extremely vigilant. You have many  
7 oversight responsibilities with the subcommittee  
8 on crimes and corrections.

9 I would like to point out that the  
10 prisons are very important institutions. And that  
11 those walls not only keep the prisoners in, but  
12 they keep the public out.

13 And, therefore, it's very important that  
14 you spend as much time as you can free up to study  
15 what is taking place in these facilities and how  
16 the policies and programs are affecting the men.

17 That does not mean that these prisons  
18 should be turned into the Four Seasons or the  
19 Plaza Hotel. But you should make sure that abuses  
20 do not take place either on the inmates or on the  
21 guards and staffs of these institutions.

22 And I would encourage you to visit these  
23 institutions on a far more frequent basis than you  
24 probably do, and, you know, pay as much attention  
25 to all of the commentary that you receive pro and

1 con on any of these issues.

2 And whatever seems doubtful, investigate  
3 yourself because there's a lot of stories in those  
4 institutions that very few people really know  
5 about.

6 This is one of them, the Holmesburg  
7 story. The experiments that went on there ran for  
8 a quarter of a century.

9 It is very unique. Most of the prisons  
10 that did this type of work, tended to focus on one  
11 area of study for a short period of time. At  
12 Virginia State Penitentiary, a few years they  
13 started on flash burn studies.

14 At Ohio State Penitentiary, they did live  
15 cancer cell injections in the mid '70s. They were  
16 doing testicular radiation studies in Oregon and  
17 Washington. I could go on and on.

18 I would dare say that very few members of  
19 the general public or elected officials knew about  
20 it. And, unfortunately, in many cases, if they  
21 did, they said that's okay, they are throw-away  
22 people, we won't spend anytime with it.

23 So, I would encourage you to bolster your  
24 stabs as much as you can considering the budget  
25 and maybe make some more visits into these

1 institutions to really see for yourselves what is  
2 really taking place.

3 REPRESENTATIVE JAMES: Now, also when  
4 this was brought to our attention -- and we have  
5 heard that this stopped, this is not allowed  
6 anymore. Do you think that there needs to be some  
7 additional policies or laws to make sure that this  
8 doesn't happen again or that there's sufficient  
9 policies on the books now?

10 MR. HORNBLUM: To my knowledge,  
11 experimentation as it took place around the  
12 country and in Philadelphia and the post-war  
13 period no longer takes place.

14 Occasionally, I'll get a call from a  
15 reporter in Texas or California who wants to know  
16 if I know of anything that may have taken place  
17 here or there or all sorts of rumors.

18 But to my knowledge, I don't think  
19 anything like that is actually happening. In  
20 fact, there has been somewhat of a backlash where  
21 men who want to be able to study specifically new  
22 AIDS drugs are not allowed to get involved because  
23 there is this threat that it could be returned to  
24 what it was like back in the old days.

25 So, I think the basic regulations that

1 have come down from the FDA and from the EPA and  
2 other organizations are basically enough. But  
3 that doesn't mean that you should close your  
4 minds.

5 I think vigilance continues to be a key  
6 aspect of this.

7 REPRESENTATIVE JAMES: Now, is it  
8 possible that some kind of medical study or  
9 testing can be positive?

10 MR. HORNBLUM: I think theoretically, it  
11 is possible that individuals in a prison setting  
12 could be used as test subjects. But the history  
13 is so dark, the greed on the part of the  
14 physicians and the administrators is so dastardly,  
15 in my judgment, that I would only trust it if you  
16 have somebody at the prison such as a Ralph Nador  
17 who was, in my opinion, scrupulous and could never  
18 be bought off and could really do a good job to  
19 discern what is a threat.

20 But if you buy into the first principle  
21 of the Nuremburg Code, as I read it and I started  
22 my book with, if you are in a constrained or  
23 coercive environmental, which a prison is, you  
24 should not be used as a test subject.

25 There is no doubt that you have thousands

1 of men in this state -- 36,000 just in the state  
2 system alone -- who, for the most part, you know,  
3 could use the money and may want to take part in  
4 something worthwhile.

5 I think it would be very easy to  
6 manipulate that into something that would be  
7 injurious to them and counter to the notion set  
8 forth in the Nuremburg Code.

9 REPRESENTATIVE JAMES: Thank you. Thank  
10 you, Mr. Chairman.

11 THE CHAIRPERSON: I have a follow-up  
12 question. The thought occurs as we are dealing  
13 with AIDS patients and that, while you may be able  
14 to delay the inevitable, there has not been a cure  
15 yet for AIDS.

16 If prisoners were AIDS victims and had  
17 the opportunity to take experimental drugs that  
18 may or may not deal with that disease, is that a  
19 legitimate area that you think might be --

20 MR. HORNBLUM: I would lean more towards  
21 that if it was a therapeutic initiative. In other  
22 words, if it was designed with the hope that it  
23 would have some remediation impact on them.

24 That is much different than what took  
25 place in many hospitals and prisons around the

1 country, including Philadelphia. These were  
2 non-therapeutic experiments.

3 It does not help any of these men who may  
4 be sitting behind me that they had dioxin put on  
5 their faces or backs or they were given chemical  
6 warfare agents.

7 That is not the treatment that somebody  
8 is sent to prison for.

9 THE CHAIRPERSON: So, that is a  
10 distinction that you would accept, if it were a  
11 therapeutic experimentation drug?

12 MR. HORNBLUM: Correct.

13 THE CHAIRPERSON: And the prisoner  
14 willingly agreed to it. And I might add, he would  
15 not get paid for it.

16 MR. HORNBLUM: Correct.

17 THE CHAIRPERSON: They are not making  
18 money on the deal. I could see it in that  
19 incident and that circumstance. Thank you.

20 We are almost out of time for your  
21 portion of this testimony. But if Mr. Artz isn't  
22 present -- I would like to ask him to come up.  
23 But if not, I am going to ask you to stay.

24 I think the members have some questions  
25 for you. Is Attorney Artz here?

1 (No response)

2 THE CHAIRPERSON: I have just given you  
3 some extended time. I'll ask the members if they  
4 have any questions. Representative Washington.

5 REPRESENTATIVE WASHINGTON: Yes. Thank  
6 you, Mr. Chairman. My question is, if these  
7 inmates were given this test and it was an  
8 experiment and they were paid \$2, was there any  
9 paperwork that they signed that said if they  
10 became honored citizens of Philadelphia, that  
11 there were any circumstances that effected their  
12 health, like some of the letters that I have  
13 received, was there any compensation to them at  
14 that time? And because most of those institutions  
15 that did those experiments still exist today.

16 MR. HORNBLUM: Unfortunately, most of the  
17 paperwork on the experiments was destroyed, but  
18 some still exist. And I was able to get many  
19 documents using the Freedom of Information Act  
20 with names of individuals and types of experiments  
21 on them, such as from the Pentagon or from the  
22 EPA.

23 These were documents that during the  
24 course of the experiments had to be sent to the  
25 federal government.

1           So, in some cases it does list  
2 individuals, more generally the types of  
3 experiments and specifically chemicals they were  
4 coming in contact with, the protocols that were  
5 being used on the men.

6           When you talk about a document that the  
7 men signed, it was a waiver or release form. It  
8 was not necessarily designed to inform the  
9 prisoner, but to let them know that you are  
10 basically giving up your rights, which I believe  
11 was illegal and immoral.

12           These documents did not exist for the  
13 bulk of the testing period. They only started, to  
14 my knowledge, in the mid '60s. They became a  
15 little bit more elaborate in the early '70s when  
16 more people started to look at this issue.

17           But they basically said, I, John Doe,  
18 take part in these experiments for a dollar a day  
19 and I no longer have the right to sue the prison  
20 system, the University of Pennsylvania, or the  
21 doctors involved, if anything untrue should happen  
22 to me.

23           I believe that is one central reason why  
24 there was so few lawsuits that emanated from these  
25 experts, that these men generally were distrusting

1 of government, weren't crazy about attorneys.

2 This document put it to them that if they  
3 got the money, they could no longer sue. And I  
4 think they bought into that.

5 REPRESENTATIVE WASHINGTON: My second  
6 question is, where are the women?

7 MR. HORNBLUM: There were women, but it  
8 was a much smaller operation. Holmesburg, the  
9 largest prison in the city, was a main test site.

10 But there were other satellite programs,  
11 both the detention center and House of  
12 Corrections. The women who were in the G-wing at  
13 the House of Corrections were incorporated in the  
14 studies.

15 And I think there will be a woman on the  
16 panel later who will tell you what she was  
17 involved with. But the female experiments tended  
18 to be much smaller in scope and size than the men.

19 REPRESENTATIVE WASHINGTON: Thank you,  
20 Mr. Chairman.

21 THE CHAIRPERSON: In closing, Mr.  
22 Hornblum, I would like to share a couple of things  
23 with you that may be of some encouragement to you.  
24 I served on the Judicial Committee of the House.  
25 Now I am going into my 13th year of my 15 years in

1 the House.

2 And we have had a succession of chairmen  
3 who have done just what you have suggested. I  
4 remember one of my first -- it was my second term  
5 -- my first time on the Judicial Committee going  
6 to Dallas Correctional Institution up in the  
7 Wilkes Barre area.

8 And that was my first state correctional  
9 institution visit, though I had been in the  
10 Farmview Institution, which was for the criminally  
11 insane. Having grown up in the neighborhood, I  
12 was very --

13 MR. HORNBLUM: One of the worse.

14 THE CHAIRPERSON: I know. And I grew up  
15 hearing the stories. But starting in the second  
16 term of my office, we had a succession of both  
17 Democratic and Republican chairmen who have always  
18 made it a priority to make members know what our  
19 state prison is, since this committee does have  
20 oversight of it.

21 And a little over four years ago, I was  
22 appointed chairman of this committee. And I have  
23 picked up where they have left off and have done  
24 an extensive number of prison tours.

25 I am not sure how many, but it is

1 somewhere near 12 or 13. I have made some visits  
2 myself in recent months on my own. I meet with  
3 the members of the Judicial frequently. And I  
4 think their experience is much like mine in that  
5 we frequently get letters from prisoners.

6 And I will grant you that most of them  
7 are people who are complaining about not getting a  
8 second helping of mashed potatoes or some guard  
9 looked at them and said nasty words to them.

10 But some of the problems may be a little  
11 bit more substantive. And I don't think that  
12 prisoners are afraid to write to us. And that if  
13 something such as the one that you have documented  
14 in your book were to ever reoccur again, I am sure  
15 that they would write to us and they would let us  
16 know one way or the other through relatives or  
17 themselves.

18 One of the greater developments of the  
19 legislative process in Pennsylvania is the  
20 broadcasting of not only four sessions of the  
21 House and Senate, but also public hearings like  
22 this and tours by P.C.N., Pennsylvania Capable  
23 Network. And many of our prisoners get that.

24 That is probably a good reason why I have  
25 an increased volume of mail. Because I usually

1 chair these meetings, and my name will appear at  
2 the bottom of the screen and they will write it  
3 down. I am the first guy they write to.

4 But I do get a great deal of  
5 correspondence from them. And I think that has  
6 opened up within the prison walls because of the  
7 fact that many of them are on cable T.V.

8 And I think that has helped them to see  
9 how they can interact with government. Perhaps in  
10 the '50s they probably didn't have the foggiest  
11 idea of how to do that, but I think that has  
12 changed.

13 And, lastly, I would indicate to you that  
14 we have here on the committee, we have regular  
15 correspondence with those who work in the prisons  
16 -- correctional officers and others who have  
17 concerns.

18 And in some cases, it's a disagreement  
19 with the management. But in a lot of other cases  
20 it is what I would consider safety issues and  
21 health issues.

22 And I have found that the doors to our  
23 prisons have been opened to legislators to come in  
24 and see whichever prisons they want at whatever  
25 time they want.

1           That doesn't mean that certain things  
2 aren't shown to us or they could be prepared ahead  
3 of time. But I have found it to be quite honest,  
4 very open, very professional.

5           I wasn't around in the '50s and 60's when  
6 these experimentations were being conducted. I  
7 wasn't around in the legislature. But I can  
8 assure you that those of us who sit on this panel  
9 would be extremely quick to respond to anything  
10 that we felt was improper along those lines.

11           I don't know if that is much satisfaction  
12 to you or not. But I know that having public  
13 hearings like this -- and Representative James  
14 brought the subject up and the fact that we were  
15 delving into some of the past history.

16           I think education to some problems that  
17 we don't want repeated. So, with all of that  
18 having been said, I don't know if that is any  
19 encouragement to you or not.

20           But I share that with you because I  
21 detect a little bit of despair in your voice and  
22 that you felt that we sort of didn't know what was  
23 going on and weren't as aware as we should be.

24           But I think most of the members of the  
25 Judicial Committee are very in tune to a lot of

1 the prison issues, not as involved as this  
2 committee is.

3 MR. HORNBLUM: Well, I would commend you  
4 on your efforts. And I have no doubt that you  
5 will try and do a better job than your  
6 predecessors.

7 Unfortunately, this was a sin of  
8 commission by the doctors and sin of omission by  
9 everybody else. They basically shut their eyes to  
10 it.

11 And in the course of my research, I  
12 talked to Allen Selauff who was a commissioner of  
13 corrections back in the late '60s and early '70s.  
14 And he said he did not allow experimentation on  
15 prisoners in the state system, but he knew it was  
16 taking place in the county system, but their  
17 oversight regs did not accord him the time to  
18 really spend the time he needed to clean that up.

19 But when he went to Illinois after  
20 Pennsylvania, he put his foot down and stopped the  
21 experiments that were taking place in the state  
22 system.

23 And I am sure that you and your  
24 colleagues would be much more vigilant if anything  
25 like that would develop. And I think it is

1 unlikely; although, there have been individuals  
2 like yourselves in the sense that they were  
3 elected officials of the state of Missouri -- you  
4 are probably aware of this.

5 A state representative by the name of  
6 Chuck Graham last year with some colleagues  
7 introduced legislation that would reduce the death  
8 sentence penalty to certain individuals and give  
9 them life in prison if they would give up a key  
10 body part such as a kidney or bone marrow.

11 So, in a way, that was moving back  
12 towards that slippery slope where people are just  
13 seen as a means to an end or some sort of vessel.

14 Now, that philosophic actual bodily trade  
15 off never did pass. But I have little doubt that  
16 if it did pass Missouri or if it comes up again  
17 and passes Missouri, it could effect Kentucky or  
18 Tennessee or some border states and move around.

19 Because there is this disinterest  
20 obviously in criminals, people who commit crime.  
21 And they are considered of less value. Even our  
22 students at Temple, as enlightened as I would like  
23 to see them, they feel that people that commit  
24 horrendous crimes should not only be in prison but  
25 used for experimentation.

1           So, there is that element out there. I  
2 am sure you are aware of it. But, you know, if  
3 it's something that we are moving toward the 21st  
4 century and hopefully not going back to the 19th.

5           So, I commend you on your efforts. And  
6 if I could be in any of your endeavors, please  
7 contact me.

8           THE CHAIRPERSON: In your earlier part of  
9 your remarks when you indicated you wouldn't be  
10 reading your prepared statement, you said  
11 something about a magazine article. I am not sure  
12 I picked up on that.

13           MR. HORNBLUM: This is a fourth coming  
14 article in the Journal of Pennsylvania History.  
15 It should be out later this spring or summer. And  
16 I thought that may be a better document to give to  
17 you than testimony.

18           THE CHAIRPERSON: Could you provide a  
19 copy to the committee?

20           MR. HORNBLUM: Certainly. This is the  
21 article.

22           THE CHAIRPERSON: Oh, this is the  
23 article? I'm sorry.

24           MR. HORNBLUM: This is the article.

25           THE CHAIRPERSON: You have provided the

1 article. I wasn't quite following what you meant  
2 by the article. Thank you very much. We  
3 appreciate your testimony.

4 Our next testifier is Nan Feyler. She is  
5 an attorney and director of the AIDS Law Project.

6 MS. FEYLER: Thank you for the  
7 opportunity to speak. I am interrupting actually  
8 what I see as an afternoon filled with additional  
9 information about horrible experiments that took  
10 place.

11 I actually am going to bring us back to  
12 the present to some extent.

13 THE CHAIRPERSON: I'm sorry to interrupt  
14 you. But the intent of this hearing is not simply  
15 to focus on the past atrocities. It is also to  
16 look at what is presently being done as far as  
17 medical services being provided to our prisoners  
18 in Pennsylvania and also to see what the needs  
19 might be in the future.

20 And, of course, some of the testifiers  
21 before you have done that. And so it should be a  
22 full spectrum of not just the past, but also the  
23 point in the future.

24 So, my apologies, but you are on track.

25 MS. FEYLER: Great. I did want to make

1 two introductory comments though, in reflecting  
2 upon what Mr. Hornblum was talking about. One is  
3 that indeed access to HIV medications through drug  
4 testing and through experimental treatment for  
5 therapeutic reasons is an issue I am not prepared  
6 to testify about today, but, in fact, is an issue  
7 that is not available to inmates in Pennsylvania  
8 in many of the county systems in the state and is  
9 of concern particularly to HIV infected inmates  
10 where standard of care medications have failed.

11 There are, in fact, medically based  
12 treatment protocols in other state facilities and  
13 other counties around the country where very  
14 strict protocols would avoid that kind of abuse.  
15 As you mentioned, no compensation, clear issues  
16 around consent, and treatment protocols purely for  
17 therapeutic basis are important, in fact, where  
18 outside institution review boards are involved.

19 So, I would caution us to be able to  
20 separate out abusive experimentation and be able  
21 to look forward perhaps to having Pennsylvania  
22 join those states where access to experimental  
23 medical treatment for people with HIV is  
24 available, something that's not true right now.

25 The other comment I wanted to make is

1 that part of what we see in terms of assisting HIV  
2 infected inmates in the state system, access care  
3 is the inherent mistrust, certainly of medical  
4 care providers, correctional medical care  
5 facilities.

6 And as you may know, particularly in the  
7 African-American community, there's been an  
8 historic mistrust of HIV medications. I think we  
9 are overcoming that.

10 But I just wanted to comment that I see  
11 an additional impact of Tuskegee and the history  
12 of abuse of experiments impacting on people's  
13 access to life sustaining healthcare and would  
14 support the efforts to look into that.

15 I am an attorney. I run the AIDS Law  
16 Project of Pennsylvania. And for interest of  
17 time, I am not going to actually read my testimony  
18 as much as highlight a few issues and invite you  
19 to comment.

20 I do appreciate the opportunity to talk  
21 to you today. The AIDS Law Project is a  
22 non-profit public interest law firm, which  
23 provides free legal services to over 1700 people a  
24 year throughout the Commonwealth.

25 In the last two years, we have

1 established an HIV prison project. And much of  
2 our work is advocating for the community standard  
3 of medical care to be enforced within correctional  
4 facilities, both within the counties and the  
5 state, as well as looking at the larger public  
6 health dilemma to ensure the continuity of medical  
7 care from arraignment through discharge.

8 And those are a few issues I would like  
9 to talk about. You are probably well aware of the  
10 epidemiological profile. But we know that  
11 HIV is as much as 14 to 20 percent higher within  
12 the correctional community or the institutional  
13 inmates than on the street partly because of who  
14 is being incarcerated because the risk factors for  
15 becoming effected with drug use, and other poverty  
16 related issues as we see it are sort of consistent  
17 with who is getting arrested.

18 Throughout the country -- I work in a lot  
19 of national panels as well -- the issue of HIV in  
20 corrections has skyrocketed and is an expensive  
21 one.

22 While it's not clear, according to my  
23 recent correspondence with the Department of  
24 Corrections, I am not sure of an exact number of  
25 HIV infected inmates within our state Department

1 of Corrections because we don't have mandatory HIV  
2 testing.

3 We know that in 1998, there were 221  
4 inmates confirmed with AIDS, which as you know is  
5 the end of the continuum of infection. And I  
6 thought an interesting fact was that 113 inmates  
7 learned for the first time that they were HIV  
8 infected in 1998.

9 There were 19 deaths from AIDS in 1997  
10 within our State Department of Corrections. I  
11 might add that there's an even higher percentage  
12 if you add, obviously, all of inmates in the  
13 correctional facilities.

14 My other point from an epidemiological  
15 standpoint I think we sometimes miss is that while  
16 women are under-represented in prison, they are  
17 substantially over-represented in terms of HIV  
18 infection and present unique challenges to the  
19 women.

20 What I wanted to comment on was to give  
21 you a bit of what we see as the state of affairs  
22 for HIV medical care within the State Department  
23 of Corrections and highlight some issues of  
24 concern.

25 What I would say in the eight years I

1 have been doing this work is that we have a  
2 variety of ways where I am making these  
3 conclusions. We correspond with about 200 or 250  
4 HIV infected inmates.

5 And throughout our treatment newsletter  
6 that we do, we recently have been surveying HIV  
7 infected inmates in the state correctional  
8 facilities. And we communicate pretty regularly  
9 with infectious disease nurses and doctors within  
10 the state facilities.

11 We also confer with Dr. Dusty Lewis, a  
12 former medical director of the State Department of  
13 Corrections. And I would say the good news is  
14 that from what we see overall, the community  
15 standard of care is being more routinely  
16 implemented within the state facility.

17 We have recently begun, as I said, a  
18 survey -- while it's small -- 47 percent of  
19 inmates from 19 different state correctional  
20 facilities have indicated that 90% had CD4 and  
21 viral-load testing every 3 months.

22 This is pretty much the standard of care.  
23 72% were on protease inhibitors and 84% on other  
24 anti-retroviral medication.

25 So, I do believe as a result of lots of

1 people's hard work and perhaps even some  
2 litigation that I wasn't part of it, we have  
3 gotten to a point where Pennsylvania is now  
4 providing a good baseline care across the board.

5 The concerns I wanted to share though are  
6 three fold. The first is that where we see the  
7 most serious problems right now is when the  
8 medical care fails.

9 The medical literature makes it very  
10 clear and something we have advocated across the  
11 board is that people who have HIV infection need  
12 to have access to experienced physicians.

13 It is a very complicated disease. It's  
14 ever changing. And it is expensive and can really  
15 be very damaging to people's healthcare, if you  
16 rely on general practitioners.

17 My understanding is the Department of  
18 Corrections' policy is to rely on general  
19 practitioners. And at least based on our survey,  
20 only 41 percent of inmates had acces to these  
21 experienced physicians. And it was about three to  
22 six months.

23 Without expanding on it further, I will  
24 say that the study showed, for example, at Johns  
25 Hopkins there was a 12 percent reduction in cost

1 and 20 percent increase in survival where  
2 experienced physicians were involved in people's  
3 care.

4 We more than once have been advocating  
5 for inmates where the medical protocol has failed  
6 -- viral loads have begun to go up, CD 4 counts  
7 have gone down, and where community-based  
8 clinicians have said you need to be more  
9 aggressive in making changes. You need to change  
10 more than one medication at a time. You need to  
11 be more experienced in looking at the medications.

12 It may sound like fine tuning, but as we  
13 have an increasing number of infected inmates  
14 within the facilities, we need to -- whether we  
15 look at tele-medicine or other technological  
16 solutions -- we need to take advantage of some of  
17 the best physicians in the country, in this state  
18 having access to inmates where medications fail.

19 The second problem that we see is that  
20 there's a significant problem that I think is  
21 going to catch up with some difficult results in  
22 nutritional support.

23 Again, early intervention -- this is a  
24 major problem with people with HIV and people on  
25 HIV medications. Side effects of medication are

1 mouth lesions, altered sense of taste,  
2 malabsorption, and dysfunction causes significant  
3 weight loss.

4           And one thing we always see in the  
5 inmates that we work with is, across the board,  
6 inmates are losing weight and having nutritional  
7 problems within prison.

8           In addition, a concern I wanted to raise  
9 is that we are hearing from inmates in the last  
10 three months, there's been a dramatic cut back in  
11 nutritional support, in vitamin therapy, Ensure,  
12 extra meal portions.

13           And I bring this to your attention  
14 because it is so stark. I, frankly, my own theory  
15 is that the vendors are using this as a way to cut  
16 back.

17           I don't know that that is true. But I  
18 will tell you that there is a pattern. I have an  
19 inmate right now that I am working with that has  
20 full blown AIDS and severe wasting, and he can't  
21 swallow.

22           And he has been transferred from one  
23 facility to another in a different region of the  
24 state. And all of his nutritional support and  
25 other medications have been stopped.

1           So, what I believe you need to do is to  
2 have an across the board standard of nutritional  
3 medical care with access to nutritional experts  
4 that is consistent from institution to  
5 institution.

6           It is pro-active. It will make sense in  
7 the long run from a fiscal standpoint. It will  
8 keep people healthier. And I think you will be  
9 dealing with some realities of medical care in a  
10 much more effective way.

11           My last point, which I would like to  
12 spend a little bit of time on, if I may, is  
13 something I have been working on with programs  
14 around the country and is something I really  
15 haven't had a chance to talk to my legislators  
16 about yet, which is the need for effective  
17 discharge plan and linkages for HIV infected  
18 inmates.

19           This is, I may say so, the trend that we  
20 are seeing throughout the country. And there are  
21 about 8 to 10 programs that we could try to  
22 replicate here in Pennsylvania.

23           It is a serious public health concern.  
24 The Association for State Territorial healthcare  
25 Officers is trying to address it. But to date, we

1 have had some support from the Department of  
2 Corrections, but no real across the board  
3 leadership and funding, frankly.

4 And in addition, this is a serious issue  
5 with our impacted inmates in the county. But let  
6 me focus on the issues in the state. As you may  
7 know -- let me just briefly remind you of some of  
8 the issues impacting or what makes it so  
9 important.

10 One of the points I want to make is that  
11 while it is very important that people with HIV  
12 have access to the standard of care, one of the  
13 complicated challenges of HIV medical care is the  
14 threat of resistance.

15 It is just sort of something that you  
16 have to understand with HIV care. It is unlike or  
17 to a greater extent than most medical protocols.  
18 People who miss medications -- and some of the  
19 literature says you have to maintain and adhere to  
20 complicated regimes 70 to 80 to 90 percent of the  
21 time or that individual will become resistant to  
22 not only that medication, but all HIV medications  
23 of that class.

24 Access to not only medication but  
25 continued and uninterrupted medication is a key

1 public health concern. If not, if an inmate  
2 leaves a facility and doesn't have access to  
3 community-based clinicians and have uninterrupted  
4 medical care, not only will that person's health  
5 deteriorate and cause a lot more money and  
6 suffering in the long term, but they may develop a  
7 resistance to HIV, which have been spread as with  
8 all strains of HIV and create an epidemic of a  
9 strain of HIV that is not impacted by current  
10 medical protocols.

11 This is an across the board public health  
12 dilemma whether you are in community-based  
13 clinics, psychiatric hospitals, any of the areas.  
14 And it is particularly key that our correctional  
15 facilities are in the forefront.

16 In additional, re-arrested inmates come  
17 back to prison or jail are going to be much more  
18 costly to treat. I was talking to a nurse in one  
19 of the prisons about 4 months ago who said that 10  
20 guys came back that were re-paroled, and 3 of them  
21 had AIDS and had left in excellent medical  
22 condition, give or take.

23 They had good CD4 count, they had a  
24 protocol. And they all came back sick with some  
25 illnesses, with full-blown AIDS. It is really in

1 my mind a tragedy for those individuals and their  
2 families. It is also much more expensive.

3 What programs around the country are  
4 doing -- Michigan Department of Corrections is a  
5 model which I would be happy to share more  
6 information on -- is investing money from  
7 corrections, from the Department of Health to not  
8 only provide linkages to community-based  
9 clinicians, but also staff to provide that  
10 support.

11 I should add that while I am not an  
12 expert in HIV prevention, it also gives us a  
13 chance to ensure that inmates being released back  
14 to the community have had education in prevention.

15 I will say also the encouraging news, if  
16 we look at studies from Rhode Island and  
17 Massachusetts and the beginning literature, it is  
18 more cost effective. And also Rhode Island had  
19 some, I think, really significant results and  
20 decreasing recidivism.

21 If you can help folks get connected with  
22 a community-based clinic and then have the other  
23 support to help them stay out of relapse and stay  
24 out of jail, I think we will not only help our  
25 larger public health, we will help everything

1 else.

2 Thank you very much. I will be happy to  
3 answer questions.

4 THE CHAIRPERSON: To start off, if we  
5 could help keep them out of jail, it's a minor  
6 middle challenge.

7 MS. FEYER: Rhode Island has some really  
8 encouraging statistics.

9 THE CHAIRPERSON: You look at the  
10 recidivism rates, I guess it's in the eyes of the  
11 beholder, but they are higher no matter whose eyes  
12 you are looking at them through.

13 It is really a concern. That is  
14 something we on the Judiciary Committee are always  
15 dealing with is, you know, always trying to  
16 balance preventive measures with punitive  
17 measures.

18 And you have to balance which works  
19 better in the community sometimes. One question I  
20 had for you was, in light of what you are  
21 mentioning about what you perceive to be a  
22 difficulty for adequate treatment for HIV  
23 patients, would you recommend that all HIV  
24 prisoners be kept in the same prison?

25 MS. FEYER: No. I actually think that

1 even in looking at those facilities where there  
2 has been segregated care, it's actually been a  
3 greater deterrent.

4           There's no medical -- that I find -- no  
5 medical evaluation, there isn't a risk of  
6 transmission. And, in fact, those states -- I  
7 believe Mississippi has some segregated housing --  
8 have found it really hasn't enhanced any kind of  
9 care.

10           What it does do is provide an obstacle  
11 for people to come forward to get tested to learn  
12 their HIV status. And I think you really don't  
13 want to do that because when people get sick, they  
14 are going to be more expensive.

15           I have been doing this work for 10 years.  
16 Five years ago, ten years ago, there wasn't nearly  
17 the excellent medical news to keep people healthy.  
18 So what you want to do, I think, is to get news  
19 out to every inmate that may be infected with HIV,  
20 get tested, learn your HIV status and get medical  
21 care.

22           THE CHAIRPERSON: My question was posed  
23 because you said that, I think the percentage was  
24 less than half the prisoners had the opportunity  
25 to get a consultation with an HIV qualified

1 physician --

2 MS. FEYER: Right.

3 THE CHAIRPERSON: -- and general  
4 physicians.

5 MS. FEYER: Right.

6 THE CHAIRPERSON: It would seem to me  
7 that if they were all in one institution, similar  
8 to our renal patients that we have in Graterord,  
9 you could focus in with the quality of service  
10 that you want to provide for them in one location  
11 instead of tele-conferencing, which I guess is  
12 better than nothing.

13 But it doesn't sound like really solving  
14 the problem of interaction that a doctor needs  
15 with a patient, especially with HIV people because  
16 it is an every changing situation.

17 That's why I asked you that question that  
18 way.

19 MS. FEYER: It's a big state.

20 THE CHAIRPERSON: It would seem to me it  
21 would make more sense for concentration of  
22 services and probably economically if they were  
23 all in the same prison.

24 MS. FEYER: Well, what I have found, in  
25 fact, there is -- I think it is a big state, and I

1 think we have to address that. I am actually much  
2 more optimistic from what the models are telling  
3 us and that I have seen in Georgia and others  
4 states where they have mandatory HIV testing.

5 But there are other ways. I think the  
6 message we have to get may seem more complicated.  
7 It is everybody, particularly people incarcerated  
8 in terms of who have a drug use history, is at  
9 risk of HIV.

10 And I might add that all of the  
11 statistics show, whether we like to admit it or  
12 not, that high risk activity takes place within  
13 prisons.

14 In fact, Canada is doing a tremendous  
15 amount, as our European countries, in doing  
16 prevention within the prison. So, I think you  
17 want to actually get the message out that anybody  
18 can be affected. Everybody that wants to should  
19 come forward, learn about prevention, learn about  
20 medical care.

21 But at the same time, we need to figure  
22 out how to make sure we are delivering those  
23 services. And we are delivering the basic  
24 services.

25 What we need to have is a system when we

1 fail, we have available experts that don't have to  
2 travel around to prison to prison in small rural  
3 areas, but where we are not driving the disease  
4 more underground.

5 THE CHAIRPERSON: I will turn the  
6 questioning over to the other members of the  
7 panel. Representative James.

8 REPRESENTATIVE JAMES: Thank you. Thank  
9 you, Mr. Chairman. Thank you again for  
10 testifying. I was going to ask you which model --  
11 which state has the best model you think we can  
12 look into?

13 I heard you say Michigan is the best.  
14 You also named Rhode Island.

15 MS. FEYER: Throughout New England there  
16 are models. And, in fact, we were also trying to  
17 do this initiative in the Philadelphia County as  
18 well. But the issues are different.

19 For the state model, I find the State of  
20 Michigan Department of Corrections has integrated  
21 the corrections and the public health of the  
22 community-based care most effective.

23 And I think it's more now than Rhode  
24 Island, which has been doing it a lot longer but  
25 everybody says Rhode Island is small.

1           So, we have a whole list actually in the  
2 office of all the programs around the country that  
3 I would be happy to share with you.

4           REPRESENTATIVE JAMES:  Would you share  
5 that with the Committee?

6           MS. FEYER:  That would be great.

7           REPRESENTATIVE JAMES:  Thank You.  Also,  
8 hearing all of these medical problems as it  
9 relates to Hepatitis and AIDS -- and I know this  
10 issue must have come up before -- but what is the  
11 problem with testing all of the inmates?

12           I know there is no mandatory testing now.  
13 But would it be better to have mandatory testing  
14 so that we can know?

15           MS. FEYER:  It's controversial.  And I  
16 will tell you honestly we have a man who was  
17 incarcerated for 8 years in the state, works for  
18 me, our prison advocate, who was infected with HIV  
19 and got his first medical care in prison, saved  
20 his life.

21           And he himself, I will say, is actually  
22 an advocate of mandatory testing.  I am not  
23 willing to go that far, for a variety of reasons.  
24 One of which is I think we have to really look  
25 very carefully at those states that do and those

1 states that don't in terms of availability of  
2 care, stigma, confidentiality, and as I said, the  
3 reality that folks may become infected within  
4 prison.

5 What I do think that we need to be more  
6 aggressive about is mandatory counseling to ensure  
7 -- and on a regular basis -- to ensure inmates  
8 feel -- I mean, I don't have a good sense of how  
9 many people are infected and not getting tested or  
10 how many people are infected and not getting  
11 treatment for fear of implications, repercussions,  
12 stigmatism within the prison system. It is very  
13 hard to get a handle on that.

14 But I do think we could be much more  
15 aggressive in taking the prevention materials and  
16 with offering more aggressive information about  
17 why it's good to be tested and what assurances  
18 will be given to inmates about the results of  
19 their test.

20 Similarly, Connecticut has an excellent  
21 model about the importance of being tested in a  
22 pack, which every inmate gets, which includes four  
23 condoms.

24 REPRESENTATIVE JAMES: Does Connecticut  
25 have mandatory testing?

1 MS. FEYER: No. I'm sorry, I sort of  
2 slightly switched gears a little bit to say upon  
3 discharge. We could be also doing more  
4 information about linkages to test sites and HIV  
5 prevention.

6 I consider tests and strategies along  
7 with prevention. Because, as you know, learning  
8 you are negative is just as important to  
9 understanding what that means. It doesn't mean  
10 you are not at risk if you engage in high risk  
11 activities.

12 So, there are points within the system  
13 where whether or not it's mandatory testing, I  
14 think we could be more aggressive in getting out  
15 the information.

16 REPRESENTATIVE JAMES: Thank you.

17 THE CHAIRPERSON: Representative  
18 Washington.

19 REPRESENTATIVE WASHINGTON: Thank you,  
20 Mr. Chairman. I need you to -- maybe I didn't  
21 interpret what you said correctly that there was  
22 an inmate who had full-blown AIDS and was  
23 transferred to another prison who is not receiving  
24 care?

25 MS. FEYER: No. It's more complicated

1 than that. And I am investigating it right now.  
2 But what we have found is more than one inmate who  
3 is -- as I understand there is three regions  
4 within the state.

5 But in any case, what we have now learned  
6 is that while there may be continuity on basic  
7 protocols involving anti-viral care, if it fails  
8 or if other things go wrong, for example, this  
9 inmate is having -- I don't remember the medical  
10 name -- but he is having trouble swallowing  
11 because of thrush and other conditions in his  
12 mouth.

13 One doctor prescribed a whole regime of  
14 medications while he was, I believe, at  
15 Graterford. He has now been transferred to the  
16 western part of the state and is being denied  
17 those medications.

18 We have heard this vitamin protocol.  
19 Some of the protocols which I find are where a  
20 good doctor is saying, let's be more creative.  
21 And, frankly, I think that the doctor at  
22 Graterford, from my experience, is quite good.

23 Inmates do not see him often enough, but  
24 he is very good. Dr. Culiak. I think that what  
25 had happened, whether it's because they are

1 different vendors or different doctors, but that's  
2 where I find that there is breakdowns, is when  
3 medications fail, you very much depend on the  
4 expertise and access to that physician.

5 And I would say also the budget  
6 constraints of that particular vendor or whoever  
7 is calling the shots. So there has been  
8 inconsistencies when drugs fail.

9 REPRESENTATIVE WASHINGTON: So, in other  
10 words, we need to look at a method in which  
11 whatever is prescribed and works best for that  
12 inmate is followed through no matter what part of  
13 the state they go to?

14 MS. FEYER: Yes, beyond the basic  
15 protocol.

16 REPRESENTATIVE WASHINGTON: Especially,  
17 if it is going to keep them alive?

18 MS. FEYER: That's right.

19 REPRESENTATIVE WASHINGTON: Thank you,  
20 Mr. Chairman.

21 THE CHAIRPERSON: We want to thank you,  
22 Attorney Feyer, for hearing your concerns. We  
23 appreciate your coming to speak to us.

24 MS. FEYER: Thank you very much.

25 THE CHAIRPERSON: Our next testifier is

1 Larry Frankel. He is an attorney with the ACLU of  
2 Pennsylvania.

3 MR. FRANKEL: The ACLU believes that all  
4 persons confined in prisons are entitled to safe,  
5 sanitary, and humane conditions of confinement.  
6 This includes adequate living space, food,  
7 recreation, medical and mental healthcare, and  
8 protection from physical mistreatment.

9 Medical mistreatment or non-treatment may  
10 rise to the level of cruel and unusual punishment.  
11 The United States Supreme Court established in  
12 Estell V. Gamble that a deliberate indifference to  
13 the serious medical needs of prisoners constituted  
14 a constitutional violation.

15 John W. Palmer, in his treatise,  
16 "Constitutional Rights of Prisoners", states that  
17 this deliberate indifference standard contains:  
18 both an objective and subjective prong. First,  
19 the alleged deprivation must be, in objective  
20 terms, 'sufficiently serious.' Second, the  
21 charged official must act with a sufficiently  
22 culpable state of mind. Deliberate indifference  
23 requires more than negligence, but less than  
24 conduct undertaken for the very purpose of causing  
25 harm. More specifically, a prison official does

1 not act in a deliberately indifferent manner  
2 unless that official knows of and disregards an  
3 excessive risk to inmate health or safety; the  
4 official must be aware of the facts from which the  
5 inference could be drawn that a substantial risk  
6 of serious harm exists, and he must also draw  
7 inference.

8 Just last year, the United States Supreme  
9 Court held that prisoners are protected under the  
10 Americans with Disabilities Act, a case that came  
11 out of Pennsylvania. That decision upheld the  
12 right of disabled prisoners to toilets, showers,  
13 and other essential facilities and services,  
14 including medical clinics within prisons.

15 The ACLU thinks that providing quality  
16 medical care to persons confined in our prisons is  
17 not only humane and constitutionally required but  
18 also sound public health policy. Let me  
19 demonstrate that point by referring to a matter we  
20 litigated several years ago.

21 In the summer of 1992, we were noticing  
22 an alarming increase in the number of active  
23 tuberculosis cases in the state. We went to  
24 federal court and sought a preliminary injunction  
25 against the Department of Corrections that would

1 have forced the Department to develop a plan to  
2 actively contain and combat this disease.

3           Ultimately, Judge DuBois, a federal judge  
4 in the Eastern District of Pennsylvania, ordered  
5 the Department of Corrections to implement a new  
6 policy.

7           And that's pretty much the policy that is  
8 in effect now. And you can see from the testimony  
9 of Commissioner Horn the benefits of having that  
10 up-to-date policy in place.

11           We believe that there was a great  
12 likelihood that tuberculosis epidemic would have  
13 spread well beyond the prison walls had the court  
14 not required the Department to take such actions.

15           So, while we are sensitive to the rights  
16 of prisoners -- I don't think anybody would deny  
17 that -- we also understand that it is the health  
18 of all of us that are at stake.

19           Because if the diseases aren't contained,  
20 there is the risk of being spread to the general  
21 population. I would like to note at this point --  
22 and I don't contend to have any expertise in this  
23 area -- but among the issues not discussed by  
24 previous witnesses, and whether there will be  
25 further hearings on these issues -- the issues on

1 drug and alcohol treatment within the prison, what  
2 is available, what other needs there might be, how  
3 we can increase. The one way we believe would be  
4 recidivism, if treatment was available on a more  
5 wide spread basis in the prison.

6 And another issue, again, I would  
7 certainly point out some of the mental health  
8 services provided in the prison. Many state  
9 studies have indicated that this is a  
10 proportionately high number of prisoners who do  
11 have mental health problems and needs that are not  
12 being addressed adequately in the prisons. And,  
13 again, we believe that the better treatment will  
14 be to reduce the recidivism.

15 The ACLU also believes that prisoners,  
16 just like every other American, have a  
17 constitutional right to refuse unwanted medical  
18 treatment. We think that right includes freedom  
19 from being used as human guinea pigs in medical  
20 experiments.

21 We hope that most Americans agree with  
22 that position. And I think there is every  
23 indication that they do.

24 We are hearing from a number of witnesses  
25 today who are describing what experiments were

1 conducted on prisoners at Holmesburg Prison in  
2 Philadelphia as well as some of the county prisons  
3 here in Philadelphia.

4 We would submit that these prisoners were  
5 subjected to a shocking deprivation of their  
6 constitutional rights, violations so severe that  
7 they should be deemed in violation of the  
8 Nuremburg Code.

9 Although these experiments ended in 1974,  
10 after Congressional hearings put an end to most  
11 human experimentation involving prisoners and  
12 mental patients, the individuals whose lives were  
13 profoundly altered by these experiments continue  
14 to be uncompensated victim of social injustice.  
15 It is our hope that this hearing today will spark  
16 an interest in trying to formulate a remedy for  
17 these constitutional violations.

18 I have had an opportunity to look at some  
19 of the testimony while sitting here today. As the  
20 budget process starts, maybe some money can be  
21 found for some kind of appropriation for some  
22 compensation as well as some medical care for  
23 these people for the rest of their lives for  
24 ongoing medical problems.

25 It is the public officials in a position

1 to exert some pressure on some of the public and  
2 possibly some of the private institutions to have  
3 culpability here.

4 I don't think that there's not sufficient  
5 evidence to say the Department of Corrections at  
6 that time knew with regard to this, but I do  
7 believe you are in a position, again, as elected  
8 officials particularly during a budget process to  
9 exert some kind of pressures that maybe somebody  
10 will listen to. And certainly an expression of  
11 your dismay and outrage that this occurred would  
12 be noticed. And I think by the people who have to  
13 answer more questions about this.

14 And I do think that your continuous  
15 visits -- and I am always impressed whenever I  
16 hear that the Judicial Committee is visiting  
17 prisons or another Committee.

18 And I certainly commend you and hope you  
19 will continue the ongoing visits to the prisons  
20 and the open communication with the prisoners and  
21 guards.

22 And I would hope this sad chapter of  
23 history does not repeat. Thank you again for  
24 providing me with this opportunity to testify.

25 Thank you for coming to Philadelphia and

1 having experts on some of these health issues.  
2 And if you have any questions, I will try to  
3 answer them.

4 THE CHAIRPERSON: Thank you for your  
5 testimony. We have a few minutes. We can allow  
6 the committee to ask questions, if they would like  
7 to.

8 I'll ask Mr. James if he has any  
9 questions.

10 REPRESENTATIVE JAMES: Thank you, Mr.  
11 Chairman, and thank you, Mr. Frankel, for  
12 testifying. I am glad you didn't have to make the  
13 trip on the train. So, we brought the committee  
14 to you so you don't have to.

15 And you can follow us tomorrow as we will  
16 be visiting some other prisons tomorrow --  
17 Delaware County and Chester -- between the date  
18 tomorrow and Wednesday.

19 I want to go into the question I raised  
20 with the last speaker. And I know you are  
21 conscious as it relates to constitutional rights,  
22 etc.

23 And I am wondering though, in listening  
24 to all of the health problems that we have coming  
25 into the institutions, should there be mandatory

1 testing for Hepatitis, for AIDS?

2 Seemed like to me -- I haven't studied --  
3 but it seems to me if we knew what the testing  
4 results were, that it would help the  
5 administration, the correction officers, the  
6 inmates.

7 We would know what the medical problems  
8 are, and we can address the medical problems as  
9 they should be addressed. I would just like to  
10 know what do you think about that?

11 MR. FRANKEL: There is a number of  
12 responses. First of all, as a general  
13 proposition, whether it is prisoners or not  
14 prisoners, we do not feel that -- except under  
15 extraordinary circumstance -- no American should  
16 be mandated to submit themselves to any kind of  
17 medical testing.

18 Medical care should be voluntary. It  
19 shouldn't be involuntarily, and that would include  
20 testing except under extraordinary circumstances,  
21 and I do not believe the prisons provide that  
22 extraordinary circumstance.

23 In addition, through the nature of how we  
24 test, how one tests for HIV, one may be infected,  
25 but it may not show up on a test or may not

1 develop until many months later.

2 So, the tests done upon entry to prison  
3 may not be relevant to whether a person is  
4 infected or not, particularly, if they develop  
5 infection through unsafe behavior while in prison.

6 Thirdly, until we know that there are  
7 adequate, truly adequate protections against  
8 discrimination, against physical harm, against  
9 retaliatory behavior, it would be very dangerous  
10 to start testing people.

11 Because unfortunately it has occurred in  
12 prisons throughout the country, that when there's  
13 a prisoner known to be HIV infected, they are  
14 subjected to some pretty cruel behavior from  
15 fellow inmates or even guards.

16 Until we are in a state where we can  
17 provide the kind of medical care one should  
18 receive in return for being tested -- I think Ms.  
19 Feyler was pointing out there have been a lot of  
20 the things with regard to treatment for people who  
21 are infected with the HIV virus.

22 Some of the treatments are expensive.  
23 Some of them are not widely available. By testing  
24 somebody, we think we are implicitly saying you  
25 are entitled to treatment, if that test is

1 positive.

2           There is a determination that, one, the  
3 state is willing to bear the burden of that cost  
4 and, two, is truly going to make it available.  
5 Mandating on people is truly dangerous.

6           REPRESENTATIVE JAMES: I appreciate that.  
7 But do you know or are you aware if there are any  
8 states that have mandatory testing now?

9           MR. FRANKEL: Well, I'll rely on what the  
10 previous witness stated. And she indicated there  
11 were some that do have those policies.

12           REPRESENTATIVE JAMES: Thank you, Mr.  
13 Chairman.

14           THE CHAIRPERSON: Before you leave, Mr.  
15 Frankel, I just wanted to thank Representative  
16 James for reminding me. For the benefit of those  
17 of you who were here earlier, in particular Mr.  
18 Hornblum, whom I see is still seated here, as an  
19 inference of what I was saying, tomorrow morning  
20 the Judicial Committee is touring the Chester  
21 Prison.

22           It is the newest state correctional  
23 prison. They have an interesting drug and alcohol  
24 treatment program. They are contracting those  
25 services out through an organization called

1 Gadenzia who has had great promise and effects in  
2 other areas that they have been working. And  
3 that's, I think, a good step in the right  
4 direction.

5 And tomorrow afternoon, just a half a  
6 block away, we are meeting with the Philadelphia  
7 Youth Aid Panel, which is an attempt to try to cut  
8 them off at the pass, if you will, teenagers who  
9 are embarking on a life of crime before they wind  
10 up in these state correctional institutions and we  
11 will have to deal with them.

12 We, as a Committee, last year made two  
13 trips to Vermont. Vermont has a community review  
14 system, which is very similar to what our Youth  
15 Aid Panels are.

16 And I am currently drafting legislation  
17 that I hope will become law in Pennsylvania that  
18 will do what the Youth Aid Panels are doing  
19 state-wide for all vendors.

20 Sort of an ARD advanced type program.  
21 ARD for those who are first-time offenders and on  
22 a first-time basis. But cutting people off from  
23 the life of crime in the early stages is very,  
24 very important.

25 It's something that is significant and

1 has shown to have great effect in Vermont and I  
2 think with our Philadelphia Youth Aid Panel.

3 So, these are the sorts of things that we  
4 are doing. We also on Wednesday morning are  
5 visiting the Delaware County Prison, which is a  
6 fairly new prison, which has been privatized.

7 So, we do, as a Committee, not only look  
8 at state institutions or correctional  
9 institutions, but we also look at some of the  
10 county institutions as well.

11 So that has nothing to do with your  
12 testimony, but you gave me an opportunity to share  
13 that with everybody before they left.

14 MR. FRANKEL: Since I gave you an  
15 opportunity, you give me an opportunity to again  
16 commend you for those efforts. I think that --  
17 and I can speak on behalf of the members of my  
18 organization -- that we are very pleased that the  
19 Judicial Committee is taking a look at the drug  
20 and alcohol treatment issues as well as some  
21 alternatives or ways to try and address crime  
22 without it all being in incarceration.

23 THE CHAIRPERSON: And I would agree with  
24 you. Simply put, an ounce of prevention is worth  
25 a cure. We want to thank you, Mr. Frankel, for

1 coming all the way from whatever street in  
2 Philadelphia you live on.

3 We came to your backyard. Thank you for  
4 coming.

5 The next testifier is Dr. Ackerman. We  
6 want to thank you for coming, Dr. Ackerman. In  
7 regards to your testimony, you can either read it  
8 for us, you can ad-lib, or you can disregard it  
9 and say whatever you would like to say.

10 I don't know if your testimony included  
11 your background, but maybe you could give us a  
12 brief resume and then give us your testimony.

13 DR. ACKERMAN: Surely. Good afternoon.  
14 I went to Philips Academy and Princeton University  
15 where I majored in religion and literature.

16 I went to medical school at Columbia, did  
17 my internship at Mount Sinai Hospital in New York  
18 City, did a first year residency at Columbia  
19 Presbyterian Medical Center.

20 I was in the military for two years at  
21 Andrews Air Force Base. And during those two  
22 years, I taught at Howard University in  
23 Washington.

24 I did my second year of residency at the  
25 University of Pennsylvania and my third at

1 Harvard. In 1969, I went to the University of  
2 Miami to become the director of dermatology, and I  
3 remained there until 1973.

4 In 1973, I went to New York University  
5 where I was director of dermatology, which is my  
6 field. I was there for 20 years. In 1993, I came  
7 to Everson Medical College also as director of an  
8 institute for dermatology and in July went back to  
9 New York City to begin a center in my field.

10 It is a given that the city of  
11 Philadelphia -- including officials in city  
12 government and officials of Holmesburg Prison, as  
13 well as those of the University of Pennsylvania,  
14 including its administration and its physicians --  
15 failed the prisoners at Holmesburg Prison during  
16 the entire period that human experimentation was  
17 conducted there.

18 By their failure to ensure that medical  
19 and ethical standards were maintained at  
20 Holmesburg Prison, they violated the Nuremburg  
21 Code that was formulated in 1947, just four years  
22 before the experiments on human beings began at  
23 Holmesburg Prison. That code was developed by  
24 American jurists following the trial at Nuremburg  
25 of Nazi physicians for crimes against humanity.

1           I want to concentrate on how the  
2 University of Pennsylvania not only failed the  
3 prisoners, but failed medical students and  
4 residents such as I was then, by its forfeiture of  
5 responsibility in regard to medical and ethical  
6 standards of Holmesburg.

7           I came to the University of Pennsylvania  
8 in 1966 to do a second year of residency in  
9 dermatology there. At the outset, I was  
10 enthusiastic about being able to do "research"  
11 part time at Holmesburg by virtue of repeated  
12 papers to the marvelous contributions that the  
13 Department of Dermatology and in particular of Dr.  
14 Albert M. Kligman was making to the inmates there.

15           I was told that not only were we  
16 advancing the cause of science at Holmesburg, but  
17 we were giving prisoners the opportunity to  
18 participate in the advance of science, affording  
19 them the chance to learn to be technicians and  
20 medical assistants upon their release from prison,  
21 and offering them the possibility of earning more  
22 money than they could in any other penal  
23 institution.

24           In fact, what was purported to be a  
25 research institute at Holmesburg, under the

1 direction of Albert M. Kligman and under the  
2 auspices of the Department of Dermatology at the  
3 University of Pennsylvania, was little more than a  
4 commercial operation in which Dr. Kligman, the  
5 University of Pennsylvania, and possibly others,  
6 reaped huge financial dividends.

7           Never once during my times at Holmesburg  
8 did I ever see anyone from the administration of  
9 the University of Pennsylvania visit the cell  
10 block on which experiments were conducted. Nor  
11 was there a single attempt, in word or deed, on  
12 the part of the University of Pennsylvania to  
13 oversee what transpired -- medically and ethically  
14 -- at Holmesburg.

15           At the same time that it was the  
16 beneficiary of a financial windfall, the  
17 University of Pennsylvania was not engaged in  
18 supervision of human experimentation at  
19 Holmesburg.

20           Not only did the University of  
21 Pennsylvania have a responsibility to the  
22 prisoners, but it also had an obligation to me and  
23 other trainees who were their charges.

24           That responsibility was to set ethical  
25 standards, to alert the violations of the

1 Nuremburg Code, and to ensure that the research  
2 done under their authority was serious and  
3 meaningful. It did nothing of the sort.

4 It had an obligation to us to set  
5 standards for informed consent. It did not. It  
6 had an obligation to mandate that scientific work  
7 at Holmesburg was truly scientific. It did not.  
8 It had an obligation to us to make a distinction  
9 between commerce and medicine. It did not.

10 What can now be done about the serious  
11 lapses of the University of Pennsylvania in regard  
12 to the operation that it bore the responsibility  
13 of Holmesburg now that the culpable parties have  
14 either died or are autumnal?

15 What follows is the least that can be  
16 done:

17 1. The prisoners are owed an apology and  
18 compensation.

19 2. The trainees, medical students, and  
20 residents, such as I also, are also owed an  
21 apology.

22 3. Courses should be given to medical  
23 students and residents at the University of  
24 Pennsylvania in which medical and ethical  
25 violations by the University of Pennsylvania at

1 Holmesburg are discussed openly and frankly and  
2 lessons of that sorry period are learned by the  
3 next generation, not only of the University of  
4 Pennsylvania, but throughout the country and  
5 world.

6 4. An end should come to the University  
7 of Pennsylvania's stonewalling, rationalizations,  
8 excuses, and denials about what went on at  
9 Holmesburg and at the schools for retarded  
10 children in New Jersey.

11 Such behavior ill becomes a great  
12 university. Until the wrongs at Holmesburg and at  
13 the schools for retarded children are acknowledged  
14 and rectified in some measure by the University of  
15 Pennsylvania, there will always be a blot, worse  
16 than any dermatologic blemish on its escutcheon.

17 If the University of Pennsylvania is not  
18 ashamed, it should be shamed by the force of moral  
19 authority and public outrage. You, the  
20 representatives of state government in  
21 Pennsylvania, can act to right, even if  
22 incompletely and very late, that which was very  
23 wrong.

24 THE CHAIRPERSON: Thank you, Dr. Ackerman.

25 REPRESENTATIVE JAMES: Thank you, Mr.

1 Chairman, and thank you, Dr. Ackerman, for your  
2 testimony. As a result of what has happened and  
3 now, what would be one of two suggestions that you  
4 would have for us as policymakers -- aside from  
5 the recommendations that can be done now by us --  
6 to help to make sure this doesn't happen?

7 DR. ACKERMAN: Well, I think that unlike  
8 what was conducted at Holmesburg, this should be  
9 done in a dispassionate, fair, and objective  
10 fashion. The data should be accumulated and  
11 assessed as scientists are supposed to assess  
12 data.

13 If the evidence is, as I perceive it to  
14 be, and there was a terrible failure in  
15 responsibility by the University of Pennsylvania,  
16 to say nothing of the officials of the city of  
17 Philadelphia, then I think that you should use  
18 your good auspices to bring some kind of moral  
19 force to bear on that university.

20 Because they have done everything  
21 possible to do the impossible, which is to make it  
22 look as if nothing happened there when, in fact,  
23 they know very well it did.

24 It's unexcusable. We are the first, we  
25 Americans, to point fingers at every other country

1 in the world that behaves in this fashion. And  
2 yet, when it happens here, we turn away. And I  
3 suggest that that not be done, that they be stared  
4 down.

5 REPRESENTATIVE JAMES: Thank you, Mr.  
6 Chairman.

7 THE CHAIRPERSON: Thank you, Dr.  
8 Ackerman. We appreciate you coming this afternoon  
9 and thank you for your testimony.

10 We will conclude today's meeting with a  
11 panel of experimentation survivors from the  
12 Holmesburg Prison. And I will hopefully pronounce  
13 your names correctly.

14 And I'll ask you folks, if you would, to  
15 come up here. There are only three chairs at the  
16 table, so we will need three more if all six of  
17 you are present.

18 Leodus Jones, Edward Anthony, Dorothy  
19 Alston, Alfonso Skorski, Joseph Smith, and William  
20 Harper. Before you sit down, I am going to ask  
21 you sit in the order in which I read your names so  
22 that when the members ask questions, for the  
23 stenographer's help.

24 I'll ask you to try to help each other  
25 out by passing the microphone.

1           Leodus Jones, since you are at the top of  
2 the list, why don't we ask you to give your  
3 testimony first.

4           MR. JONES: Good afternoon, Mr. Chairman,  
5 and members of the panel. My name is Leodus  
6 Jones. I am the director of the Community  
7 Assistance for Prisoners referred to as C.A.P.,  
8 which is a community-based organization with a  
9 history which spans over two decades.

10           In spite of its limited financial and  
11 human resources, C.A.P. has consistently  
12 demonstrated a noteworthy level of commitment and  
13 dedication to meeting its target population needs.  
14 We welcome the opportunity to testify before you  
15 today in reference to the experiments that took  
16 place in Philadelphia County Prison, sponsored by  
17 the University of Pennsylvania, headed by Dr.  
18 Albert M. Kligman, head dermatologist of the  
19 Medical Research Department at the University of  
20 Pennsylvania.

21           I'm one of the survivors. The most  
22 horrifying, humiliating, embarrassing, and  
23 depressing experience I've had was to allow myself  
24 to be used in the human experimentation/medical  
25 testing that was taking place in the Philadelphia

1 County Jails.

2 Horrifying because I knew little concern  
3 at the time. I believed what I was being told by  
4 those who posed as doctors, wearing their long  
5 white coats.

6 As a child, I was taught that those who  
7 wore white coats/white collars were to help heal  
8 the sick and men of God, only to learn in my later  
9 years that I must be made aware of the imposters.

10 The embarrassing side of this all was to  
11 learn that I was played. Accepting Kibbles and  
12 Bits for the use of my body, while corporate  
13 business, the U.S. Government, along with the  
14 medical community, made millions.

15 I'm upset because after all of these  
16 years, I woke up to the realization that I was a  
17 victim of coercion, manipulation, exploitation,  
18 and deceit, along with hundreds of others.

19 Some do not wish to make it known that  
20 they took part in these studies because they have  
21 since made major changes in their lives for the  
22 best. Either they are ashamed or afraid to come  
23 forth out of respect for their families or losing  
24 their jobs or in some cases being sent back to  
25 prison.

1           Since the book "Acres of Skin" hit the  
2 shelves of book stores across the country, some 30  
3 to 40 men have come forth, not to mention the  
4 women that were also used.

5           These men wish to be heard. They want  
6 the public to hear directly from them what their  
7 life has been like since the experiments and the  
8 suffering by all parties experienced.

9           They know by now that they have been  
10 misused and abused. This has been extremely  
11 depressing. Their only wish now is not to be  
12 misrepresented, and to be compensated for their  
13 pain and suffering by all parties responsible.

14           For over 30 years, this sort of practice  
15 has been conducted by the medical communities,  
16 Ivory research as well as corporate business and  
17 the like, understanding that the City of  
18 Philadelphia, Commonwealth of Pennsylvania were at  
19 the time our caretakers.

20           We realize that they were more concerned  
21 about dollars and cents than human welfare.

22           Let us examine the results of  
23 tests/sorts. Let's explore. Men became bald.  
24 Some developed sores from shampoo studies. Some  
25 of the prisoners' sweat glands were removed, toxic

1 chemicals placed on their skin, mind altering and  
2 hallucinating drugs were being tested.

3 Toothpaste studies leaving men with no  
4 teeth or useless teeth. Pill studies from cancer,  
5 STD sperm test, athletic foot test, the list goes  
6 on and on. Violating the hippocratic oath,  
7 Medical Code of Ethics, and the Nuremburg Code.

8 Til this day, there has been no known  
9 follow-up treatment. For too long men and women  
10 who participated in these studies have been left  
11 with unexplainable illnesses, primary care  
12 physicians. Til this day, we do not know what the  
13 medical problems are that these men are suffering  
14 from, nor do they know how to treat them.

15 Who's footing the bill? What should be  
16 done concerning this?

17 The Universal Declaration of Human Rights  
18 adopted two of four freedoms, i.e., Freedom from  
19 Want and Freedom from Fear. Freedom from Want is  
20 economic freedom that involves basic economic  
21 rights of individuals, i.e., decent standards of  
22 living without which individuals are easy targets  
23 for exploitation, abuses, and inhumane treatment.

24 Without Freedom from Want, there is no  
25 human dignity. Freedom from Fear served as the

1 basis of the struggle against murder, torture,  
2 slavery, and genocide anywhere in the world.

3 Human rights consideration was equally  
4 central to the trial of Nazi doctors by the U.S.  
5 Military Tribunal at Nuremburg, December 1946 -  
6 August 1947.

7 At that trial, 23 Nazi doctors and  
8 scientists accused of torturous and murderous  
9 experiments on concentration camp inmates were  
10 sentenced to death and life imprisonment.

11 The U.S. judges sitting in judgment of  
12 the Nazi doctors rejected the defense argument  
13 that the defendants only followed orders by their  
14 superiors. Following orders was no excuse for  
15 harmful, dangerous, and inhumane treatment. The  
16 judges ruled that certain basic principles must be  
17 observed in order to satisfy moral, ethical, and  
18 legal concepts.

19 The judges articulated a set of 10  
20 research principles, known as the Nuremburg Code,  
21 that centers on the human rights of research  
22 subjects, the first of which is the right of the  
23 subject to refuse participation in research and  
24 the ninth is the right of subjects to withdraw  
25 their participation to an experiment at liberty.

1           The contribution of Nuremburg was to  
2           insist that human rights, equality in dignity, and  
3           human worth of men and women are universal, i.e.,  
4           they transcend state sovereignty, state laws and  
5           practices.

6           When developed countries conduct research  
7           in developing countries where poverty, endemic  
8           diseases, and low investment in healthcare are the  
9           main features, they violate human rights because  
10          poor and desperate people will consent to  
11          anything.

12          They are unable to give free, voluntary,  
13          and understanding informed refusal.

14          What we want:

15           1. Follow-up medical treatment at the  
16           expense of all parties responsible.

17           2. Compensation for pain and suffering.

18           3. Financial support towards  
19           rehabilitation programs for prisoners and  
20           ex-prisoners.

21           4. The lawmakers to introduce a Bill to  
22           stop further practices of this sort.

23           Yours respectfully, Community Assistance  
24           for Prisoners.

25           THE CHAIRPERSON: Thank you. Mr.

1 Anthony, if you can please take the microphone.

2 MR. ANTHONY: My name is Edward Anthony.  
3 I reside at 401 West Walnut Lane. I participated  
4 in University of Pennsylvania studies during 1964  
5 to 1966 at Holmesburg Prison.

6 During the time I was in prison there I  
7 spent approximately the first 15 months in  
8 Holmesburg Prison. I went to the House of  
9 Corrections for the last 6 months.

10 When I was being checked into the prison  
11 the first time, I thought that it must have been a  
12 crazy place with guys trying to kill each other  
13 because everyone was walking around with bandages  
14 on their hands and body.

15 Later I learned from my cell mate, that  
16 this was because of the medical tests. At night,  
17 the University of Pennsylvania guys would come  
18 over and distribute pills.

19 Another guy, an inmate, had a portfolio  
20 on all the tests. And he would tell us about the  
21 tests that we could get involved in.

22 My cell partner told the inmate to hook  
23 me up with something good. I was told that the  
24 tests were safe and that I could make some money.

25 They were really selling the tests to us.

1 I saw other guys on the tests and figured it was  
2 okay. I read the consent form that the University  
3 of Pennsylvania people gave to us, and it scared  
4 me. The form said that I couldn't hold the  
5 University of Pennsylvania responsible for  
6 anything.

7 I asked them, "What's up with this? Is  
8 this risky?" And the University of Pennsylvania  
9 person said, "Oh, that's just a formality."

10 I did a patch study for Johnson and  
11 Johnson bubble bath for \$30. My understanding was  
12 that they were going to see how irritated my skin  
13 would be. They sprayed something on my back to  
14 make the tape stick.

15 Benzoate went into my blood stream. As  
16 soon as I returned back to my cell, I fell on the  
17 floor and passed out. I complained for two or  
18 three weeks.

19 And a male nurse named Otto gave me  
20 Emprin for my pain. It didn't help. So I kept  
21 complaining. And the University of Pennsylvania  
22 people gave me some pain relievers that were like  
23 morphine, which they got out of the safe.

24 They then bathed my back with a  
25 vinegar-like substance and gave me calamine

1 lotion.

2 I went to Philadelphia General, and they  
3 did a surface treatment. I went to various  
4 hospitals and clinics too. I had an internal itch  
5 in my hands. And the only way to make it feel  
6 better was to put my hands under scalding hot  
7 water.

8 In prison, I would take really hot  
9 showers because that was my only relief. In 1969,  
10 I was in prison for 7 months at Lexington,  
11 Kentucky, and my rash broke out again. They  
12 treated me there and operated on my feet. And I  
13 also took pills. They had me soak my hands and  
14 feet everyday.

15 I went to PGH several times. The last  
16 time was in 1973. And I was hospitalized for  
17 three weeks. I had joined an Islamic mosque, came  
18 off the streets, and became a custodian at the  
19 mosque.

20 One day my feet and hands had swollen  
21 over three times their normal size - like boxing  
22 gloves - and they smelled real bad.

23 The stuff had gone to my hands and feet  
24 because of gravity and because of my prayer  
25 ritual.

1           At PGH the nurses cut off skin from my  
2 hands and feet. I was put on steroids, pain  
3 pills, valium. And they soaked my hands and feet  
4 three times a day in something that smelled like  
5 vinegar.

6           The doctors there never gave a positive  
7 diagnosis. They didn't know what I had. In the  
8 laboratory they said I was a "gold mine" for  
9 research.

10           They eventually operated on my hands and  
11 feet. My doctor there was the head of  
12 dermatology.

13           I was also in a diet test for \$30 for the  
14 University of Pennsylvania. For this test, I had  
15 to take seven pills, three times a day. After 21  
16 days, I suffered dehydration of the colon. I  
17 couldn't pass my bowels.

18           They gave me a laxative, and I had piles  
19 that were indescribable. The University of  
20 Pennsylvania had no one there to treat me. They  
21 were supposed to take me to PGH, but I think they  
22 didn't want PGH people to see what they had done  
23 to me.

24           One morning the institution doctor, Dr.  
25 Geizer, a ghoul, did an operation on me. They

1 took me into the back of C-block, the quarantine  
2 block, into a small room.

3 Dr. Geizer used novocaine to numb the  
4 rectum, but three inmates had to hold me down  
5 while he cut and burned my hemorrhoids.

6 Despite the novocaine, it was so painful  
7 that I hollered and passed out during the  
8 operation. The doctor left after the operation  
9 and didn't give me any care or instructions for my  
10 aftercare.

11 They left a drain in my rectum for three  
12 days that should have been taken immediately. I  
13 went back to Dr. Geizer because I was in pain and  
14 he said, "No wonder. He still has the cork in his  
15 ass."

16 He pulled the cork out, and I began to  
17 bleed. I was sent back to the housing area. And  
18 it was three months before I could sit and eat  
19 with the other inmates.

20 Another test I participated in was the  
21 Army test in 1965 for \$75. We were paid for each  
22 injection they gave us and for each math problem  
23 we did. I was only in the primer test. This  
24 primer test was what they did to see which guys  
25 were going to be used for the real test.

1           They gave me mathematical problems to do  
2 and then they injected me with something, but I  
3 don't know what that substance was.

4           They told us to do the mathematical  
5 problems again, but I was spaced out and couldn't  
6 concentrate and couldn't do more than three  
7 problems.

8           Because I had reacted so badly to that  
9 first injection, they didn't take me out to the  
10 trailers for the rest of the test. I just went  
11 back to my block. They sent me back to the block.  
12 And for three or four months, I was still spaced  
13 out.

14           Who knows what could have happened if I  
15 hadn't had friends in the jail to watch out for  
16 me. Some of the guys who had done the test had to  
17 go to the mental ward in the hospital. I was a  
18 candidate for this, but because other inmates  
19 watched out for me, I never got sent there.

20           There were three other studies I remember  
21 participating in. One involved sleeping pills and  
22 the other was a barbiturate test. And I also did  
23 a dye study where they shot dye into my veins. I  
24 was in a trailer and could taste butter in my  
25 mouth and they monitored my arms for one night.

1           I don't know the long-term effects of  
2 these three studies.

3           I had a flashback occurrence around 1969,  
4 and was sent to the psychiatrists, Dr. Guy and Dr.  
5 Case, in the House of Corrections. This was the  
6 first time I was treated for my mental troubles.  
7 I was diagnosed as having psychosis paranoia.  
8 They gave me medication and I also did therapy.

9           I was under pressure in that jail. It  
10 was so corrupt. The experiments were a release  
11 from that tension. They were a way to get out of  
12 the blocks, a social thing.

13           I got money to get things from the  
14 commissary without dealing with the loan sharks.  
15 With the money I made in prison, I bought  
16 letterhead so I could write to my family. I  
17 bought items from the commissary such as ice  
18 cream, chips, movie tickets, candy bars.

19           Buying these things relieved the boredom  
20 of being in prison. I had other sources of  
21 income. Every now and again, I'd get a visit and  
22 someone would leave a few dollars. I also had a  
23 job. I worked in a knit shop and a tailor shop,  
24 but I got out of work to do the experiments.

25           But I eventually had to terminate my job

1 after my hemorrhoid operation and become a worker  
2 on the C-block.

3 When I had gotten out of jail, I didn't  
4 know that there was anything I could do. Because  
5 I had signed that form, I thought I had sold my  
6 rights away.

7 I didn't know who could show me my rights  
8 or get a lawyer. I became suicidal. I thought  
9 there was no way of being helped. I didn't even  
10 believe there was a God. I promised that I would  
11 never let another doctor treat me. The University  
12 of Pennsylvania people had no compassion.

13 My body and mind are deteriorating  
14 because of the aftereffects of the experiments I  
15 participated in. I had hemorrhoid problems, but  
16 was afraid to go to the doctor.

17 I used to use Preparation H or vaseline  
18 everyday to put the hemorrhoids back in place.  
19 I have developed arthritis. I still have  
20 gastrointestinal problems from the diet study.

21 I get migraine headaches about two to  
22 three times a week. I have seen a psychiatrist  
23 for the last 14 years at the Warny-Smith drug  
24 rehabilitation center.

25 I take blood purifiers -- Echinacea and

1 red clover. Everyday I take a laxative called  
2 tsyllium to have a stool. This is because of my  
3 rectum operation.

4 Last year Dr. Khabani operated on my foot  
5 because of the patch test deteriorating my bones  
6 from the toxic Benzoate that they sprayed into my  
7 system. I go to doctors -- Dr. Strickland and Dr.  
8 Usef Khabani -- for my skin about two or three  
9 times a year.

10 Recently, I had an operation at Temple on  
11 my hemorrhoids because it had gotten like a tumor.

12 I feel used. My IQ is low, and I was  
13 functionally illiterate at the time I took the  
14 experiments. When I got out of prison, I couldn't  
15 be around my kids and my family because I wasn't  
16 physically and emotionally okay. I was an  
17 outcast. I've only recently been able to win back  
18 the respect of my family and earn the right to  
19 spend time with them.

20 I look awful and they don't want me to  
21 even be in the house. I can't work. I can't ball  
22 up my fist. I'm permanently disabled. Some days  
23 I feel good and the next day I feel bad.

24 I'm mentally strained. Especially after  
25 I started working with Allen Hornblum, I could

1 cry. And I didn't know why. And I couldn't  
2 sleep. I've stopped working with him except for  
3 some things because of that.

4 I'd like to see follow-up treatment for  
5 the guys for these tests. I don't want anybody to  
6 go through this again. I want science to be used  
7 right.

8 People should do experiments according to  
9 the Nuremburg rules. These experiments by the  
10 University of Pennsylvania are an example of  
11 injustice and iniquity.

12 THE CHAIRPERSON: Thank you, Mr. Edwards.  
13 Next is Ms. Dorothy Alston.

14 MS. ALSTON: Thank you. My name is  
15 Dorothy Alston. I live at 6422 Haverford Avenue,  
16 Philadelphia. I am 62 years old. I was in the  
17 House of Corrections in 1962 for approximately 3  
18 months, and in 1963 for approximately 4 months.

19 During my stay at the House of  
20 Corrections, I participated in 2 studies -- the  
21 tampon study in '62 and a biopsy study in '63.

22 I heard of these studies by word of mouth  
23 and also through an inmate that worked in the  
24 nurses' office.

25 The University of Pennsylvania people

1 never solicited for test subjects. They had  
2 others, such as this inmate, do that.

3 At the time I decided to participate in  
4 the University of Pennsylvania study largely  
5 because I needed money. I occasionally got money  
6 from my family or through writing letters for  
7 other inmates.

8 But other than that, I had no other  
9 source of income. I was trying to save up some  
10 money for when I got out, in addition to buying  
11 commissary items such as cigarettes, soap, writing  
12 materials, and cosmetics.

13 The experiments seemed like the only way  
14 I could get some money. There is a mistake there.  
15 It wasn't 30 or 40 jobs for the females. There  
16 were only about 3 or 4 jobs for the females --  
17 paying jobs -- paying 25 cents a day in the House  
18 of Corrections. There were over a hundred women  
19 staying there.

20 There were no openings during the time I  
21 was in the House of Corrections. The first study  
22 I participated in was a tampon test 1962, even  
23 though I wasn't normally a tampon user. At the  
24 time I was a pre-trial detainee without the  
25 resources to pay bail. I had been arrested for

1 shoplifting two steaks.

2 The University of Pennsylvania people  
3 came up, gave us a survey to fill out. On the  
4 survey was questions such as what kind of flow we  
5 had, how many tampons we used per day, what our  
6 brand preference was.

7 If I had been asked to sign a consent  
8 form, I wasn't aware of it. We had to put our  
9 institution number on the survey as well so that  
10 they could keep track of the results.

11 They gave us tampons according to our  
12 menstrual flow - heavy, medium, or light. We were  
13 given clean plastic bags to put the tampons in  
14 after we had used them. I used one tampon. And  
15 when I pulled it out, I noticed that the head was  
16 loose cotton.

17 I only used one more until I gave the  
18 rest of the tampons to another woman who completed  
19 the study in my place. After my period ended that  
20 month, I had a bad pain in the bottom of my  
21 stomach.

22 I had the nurse examine me and she said  
23 that maybe I should go to the Philadelphia General  
24 Hospital to have the -- Philadelphia General  
25 Hospital is where they took inmates at -- to have

1 the cotton removed. I went there and had it  
2 removed because it had not come out before.

3 I received approximately \$15 to  
4 participate in this study. After I had  
5 participated in this tampon test, a female inmate  
6 named Roberta Barns told me about another study, a  
7 biopsy study.

8 At the time of my understanding of the  
9 study, it was that they were going to pull out  
10 flesh once.

11 I agreed to do the study by telling  
12 Roberta Barns who told the nurse. And then the  
13 University of Pennsylvania people came over. This  
14 was in 1963.

15 There was no paperwork that I had to fill  
16 out before I participated in the biopsy study. As  
17 I waited for the biopsy study, I stood in line  
18 with the other women.

19 The people conducting the study did not  
20 let us talk to one another. A person with a white  
21 jacket that had a big UP on it came out and asked  
22 each of us our name.

23 Only nine people were to participate in  
24 the experiment. We lined up in the order that the  
25 person told us, and we entered the room one by

1 one.

2 After the biopsy was performed, they made  
3 us go out through another door that was a ways  
4 down the hall from the first door so that would we  
5 could not talk to the other people still in line.

6 I was the third person in line. So I did  
7 not see the first woman come out of the other door  
8 where Gladys Mack Burnett, an officer, stood  
9 making sure that the women went back to their  
10 cells. The woman looked hurt.

11 When I went into the room, they put my  
12 legs up in stirrups. They didn't use any  
13 anesthesia. They had a lot of instruments set  
14 out. They ripped flesh from by womb and it hurt  
15 terrible.

16 They told me that if I only came in one  
17 time and didn't complete the study, I wouldn't get  
18 my \$100. I had to come in 4 to 6 more times for  
19 this experiment. Each time, they took a biopsy.

20 This biopsy had to be done when I wasn't  
21 menstruating. So, I didn't come in for a biopsy  
22 the week I was having my menstrual cycle.

23 At the end of the experiment they told me  
24 that I would receive my money in seven to ten  
25 days. I received \$100 for participating in this

1 study. At first I was excited to go in for the  
2 biopsy study. I thought the University of  
3 Pennsylvania people would do a pelvic exam on me  
4 first.

5 I hadn't had a pelvic exam when I arrived  
6 at the House of Corrections because I was having  
7 my menstrual. At the time of my arrival, they  
8 only tested my blood for syphilis.

9 The prison was dirty and some of the  
10 women weren't very clean and even the nurses'  
11 office and equipment weren't very clean. So I  
12 wanted to be examined to make sure that I was  
13 doing okay.

14 My normal menstrual cycle came every  
15 month and lasted only three to five days. There  
16 is no history of menstrual or gynecological  
17 problems in my family.

18 About the time I got the money from the  
19 biopsy study -- a month later -- I started having  
20 irregular menstrual cycles. My periods began to  
21 last longer. I complained to the nurse and she  
22 told me to see the University of Pennsylvania  
23 people.

24 I went to the University of Pennsylvania  
25 people and they told me that they were at the

1 prison for a different study. So they told me  
2 that they would send somebody else. No one else  
3 ever came. I kept asking the University of  
4 Pennsylvania people in the prison, but each time  
5 they just passed it off.

6 I finally had to put in to see a social  
7 worker to have them call my family. I was hoping  
8 that my family could do something about the  
9 problem.

10 To see the prison doctor was a slow  
11 process. I had to put my name on the list. About  
12 10 days later, the doctor would come. He had a  
13 nasty attitude and would sometimes refuse to see  
14 inmates whose name had been put on the list. He'd  
15 say, "I've seen too many of you today. Go away."

16 I put my name on the list and finally got  
17 to see the doctor once about my irregular  
18 bleeding. He gave me a couple aspirin and told me  
19 to go back to my cell and elevate my feet.

20 I don't think he knew I participated in  
21 the studies. But the nurse, Ms. Wolfe, I think  
22 had seen me go in for the study.

23 After the biopsy test, I didn't  
24 participate in anymore studies. When I got out of  
25 jail, my medical problems relating to the studies

1 I had participated in continued.

2 I still had irregular bleeding and my  
3 periods were lasting 12 to 13 days. The longest  
4 one of my periods lasted 22 days. Some days I  
5 couldn't get out of bed. I had to use towels to  
6 absorb the blood.

7 I was 32 when I went to the PGH where a  
8 doctor did a D & C. The irregular bleeding  
9 stopped for 4 months. But then it began again.  
10 And I thought it won't stop. I went to Einstein  
11 Northern and checked into a gynecology clinic  
12 there. The doctors gave me a shot to stop the  
13 bleeding.

14 Excuse me, please. Excuse me, please.

15 THE CHAIRPERSON: Take your time. We are  
16 not in a hurry.

17 MS. ALSTON: They gave me pills, birth  
18 control pills I believe. And that helped a little  
19 bit. I went to the emergency room three different  
20 times for a transfusion.

21 On the last visit to the emergency room,  
22 they put me in the hospital. The doctors had  
23 tried everything they knew how at this point. I  
24 followed all the instructions they had given me.

25 THE CHAIRPERSON: That's fine. We

1 understand. We have your written testimony. I am  
2 sure we will read the remaining page.

3 MS. ALSTON: I want to say that when I go  
4 and talk about this, it erupts the pain that I  
5 have tried to suppress over the years. It's not  
6 going to go away.

7 I don't want this to ever happen to  
8 nobody else. I don't want any female -- me, being  
9 a female -- or any of the men to ever have to go  
10 through anything like this.

11 This tore my life. It tore my marriage  
12 up. It ended my childbearing years at 34 years.  
13 I couldn't have no more children because they gave  
14 me a hysterectomy, if you read on, due to being on  
15 an experimental test. Not in having no known --  
16 they didn't know what the unknown was going to be.

17 This is what I participated in. Thank  
18 you.

19 THE CHAIRPERSON: Thank you. Mr.  
20 Skorski.

21 MR. SKORSKI: Good afternoon, ladies and  
22 gentlemen. My name is Alfonso Skorski. My  
23 address is 2379 Duncan Street, Philadelphia PA.  
24 19124. I am 49 years old. I was incarcerated  
25 from 1970 to late 1973 or early 1974. During my

1 approximately three years in prison, I spent the  
2 first two years at Holmesburg Prison. And then I  
3 was transferred to the House of Corrections for  
4 approximately a year.

5 I finished my sentence while on the work  
6 release program. While I was in prison there, I  
7 participated in two University of Pennsylvania  
8 studies.

9 The first study I participated in was a  
10 cosmetic patch test. Being a sentence inmate, I  
11 worked. So, I worked in the knit mill. Someone  
12 in the knit mill where I worked told me about the  
13 University of Pennsylvania experiments that were  
14 going on. I went to the prison guards and asked  
15 them if I could get signed up for these  
16 experiments.

17 They said it was no problem. After that,  
18 a couple guys -- I didn't know who they were.  
19 They were dressed in long white coats. They came  
20 up to me. I assumed they were doctors because of  
21 the way they were dressed, but I don't know  
22 whether they were actually.

23 These guys said that I could sign up for  
24 this patch test. They told me that there would be  
25 no side effects, damage, or harm. I also didn't

1 see any forms, like a consent form, an  
2 acknowledgement of what I was going through,  
3 anything that would have made me suspicious and  
4 probably caused me to not do the experiments.

5           These guys looked like professional men.  
6 And I was in pretty good shape so I believed them  
7 when they said that the experiment wouldn't hurt  
8 me.

9           To do the cosmetic patch test, I went to  
10 the University of Pennsylvania cell block where  
11 the experiments took place. They put some sort of  
12 a substance on my left arm and on my left, back  
13 shoulder blade.

14           They covered that with gauze and then  
15 used medical tape to hold the gauze in place. I  
16 wore that patch about three to four days and then  
17 they removed it. I was paid only a little bit for  
18 this test, approximately \$5.

19           The other study I participated in was an  
20 athletes' foot test. The year was 1970, or early  
21 1971. I was told I could get ten times more money  
22 for this test, about \$40 or \$50. It made it  
23 appealing.

24           I worked at the knit mill in the prison,  
25 but that only paid 25 cents a day. I needed some

1 money to buy some necessities such as toothpaste,  
2 soap, shampoo, combs, and cigarettes, candy bars  
3 -- things I could enjoy while in prison.

4 For the test, I went back to the block  
5 where the University of Pennsylvania experiments  
6 took place. I don't remember signing a consent  
7 form. They asked for my name and number so that  
8 they could pay me. And then they told me that  
9 they were testing an athletes' foot deterrent.

10 They sprinkled powder on my right foot  
11 and then they placed a plastic bag over my foot.  
12 The plastic bag went up to the middle of my calf.  
13 Then they wrapped the plastic tight with duct tape  
14 to create a vacuum. No air could get in, no air  
15 could get out. They said they needed heat and  
16 moisture.

17 I wore the plastic bag over my foot for  
18 one week. I was told that if I took it off, I  
19 wouldn't get paid for the test. I returned to the  
20 University of Pennsylvania testing block with  
21 three other gentlemen that had also done the  
22 athletes' foot test.

23 They took off the plastic that had  
24 covered our foot, and I thought I was going to  
25 faint because of the test. I immediately gagged

1 from the stench. They didn't do anything to help  
2 the smell in the room. I just had to put up with  
3 it for about 10 minutes until they were finished.

4 I went back to the showers to wash off  
5 that smell. And I didn't think anymore of the  
6 test.

7 About a week went by. And one morning as  
8 I got out of bed, I fell down to my knees. My  
9 right foot had no feeling. I couldn't control it  
10 or lift it. I stood up straight and I walked by  
11 taking a step forward with my left foot and  
12 dragging my right foot.

13 I was very upset and concerned about what  
14 was happening with my foot. In prison, you can't  
15 show any weakness. I was worried that if I was  
16 crippled, that other inmates would treat me badly,  
17 that they would steal my stuff or harm me. I  
18 wanted to do something immediately.

19 I went to the sergeant of the guards and  
20 asked if I could go to the doctor. I saw the  
21 prison doctor, but he couldn't explain what was  
22 happening to my foot.

23 At the time I didn't connect what was  
24 happening to the experiment I had participated in  
25 the week before for the University of

1 Pennsylvania.

2 I didn't tell the doctor about the  
3 experiment. So, I'm not sure if he knew that I  
4 had participated in it.

5 I was shipped to the PGH hospital about  
6 two days after seeing the prison doctor. Several  
7 doctors came in to see me in the examining room.  
8 My vital signs were okay, but I still had no  
9 feeling in my foot.

10 Finally, a nurse specialist came in and  
11 did a probe on my foot. The specialist diagnosed  
12 me with nerve damage.

13 The nerve had been severed right where  
14 the bag -- the plastic bag -- had been wrapped  
15 with duct tape. I had never had nerve problems  
16 before this.

17 I was next sent to St. Luke's Hospital  
18 located on 8th and Gerard. I stayed in the prison  
19 ward there for one month. Everyday I would go  
20 into a therapy room and the nurse would put the  
21 probes -- electric probe -- on my foot and below  
22 my knee for about an hour.

23 And it would send an electrical impulse  
24 about every 15 seconds. This was therapy that  
25 made another nerve connection to replace the nerve

1 that had become severed. Everytime the impulse  
2 went through the foot, the foot erratically moved.

3 At St. Luke's, they also made a brace for  
4 me. They placed a metal plate in the right foot  
5 of one pair of shoes. There were also two metal  
6 strips on the side that went up the sides of my  
7 right leg up to the knee. I still had to drag my  
8 foot. But with the brace, the foot was in an  
9 upright position.

10 When I left the hospital and returned to  
11 prison, I wasn't given any medication. They just  
12 said, "let's hope this works."

13 I wore the brace for one year. Every  
14 morning I would take the brace off and work the  
15 muscle myself. Slowly the feeling came back in my  
16 foot. I don't have to wear the brace to keep my  
17 foot up. But even today, if I don't concentrate  
18 as I go up the steps, my foot will still droop and  
19 I end up tripping.

20 I have also experienced emotional  
21 distress because of this because I haven't been  
22 back in prison since my time in Holmesburg and  
23 then House of Corrections.

24 And I have that part of my life behind  
25 me. I still have this reddish discoloration on my

1 skin, though. It's an ugly sight. I don't wear  
2 shorts because that foot looks ugly. And I don't  
3 want to have to explain to others -- especially to  
4 my children -- how I came to get this scar.

5 I don't do simple things like go swimming  
6 at the beach with them. Because then they would  
7 see this problem with my foot and ask me questions  
8 that I don't want to answer.

9 It wasn't until I heard the other former  
10 inmates' stories that I connected my foot problems  
11 with the University of Pennsylvania's athletes'  
12 foot test.

13 Learning this has finally given me peace  
14 of mind about what my foot is.

15 Basically, I want to see something done  
16 about this so it will never happen again. I don't  
17 want others to be put in the position where they  
18 are used as human guinea pig.

19 THE CHAIRPERSON: Thank you, Alfonso.  
20 Joseph Smith is next.

21 MR. SMITH: I can't see. So, I asked her  
22 to read it for me.

23 THE CHAIRPERSON: That's fine. Ask her  
24 to speak into the microphone.

25 AUDIENCE MEMBER (reading for Mr. Smith):

1 My name is Joseph Smith. I live at 6249 Addison  
2 Street, Philadelphia 19143. I am 70 years old. I  
3 was in and out of Holmesburg Prison between the  
4 years of 1956 and 1965, never spending more than  
5 one year at a time in the prison.

6 During my stay at Holmesburg, I  
7 participated in five different experiments.  
8 Another inmate in the prison told me about these  
9 experiments.

10 I'd give the pharmacy guys -- a group of  
11 inmates who worked in the pharmacy -- packs of  
12 cigarettes so they would sign me up on a list to  
13 do experiments.

14 One experiment I participated in was the  
15 patch test. I did this experiment three different  
16 times -- once on my arm, once on my back, and once  
17 on my leg.

18 The only thing that they told me before  
19 the test was that they were going to put some  
20 gauze on it with my initials. They said that that  
21 way they would know if I didn't keep the gauze on  
22 me, and then they wouldn't pay me for the  
23 experiment.

24 Then, they applied patches to me skin  
25 that resulted in a lot of pain. At night I would

1 lie in my bed with my arm in the air just shaking  
2 it so that it would ease the pain.

3 Some of the guys would take the bandages  
4 off and put them on the wall and then it would eat  
5 the paint on the wall.

6 Another experiment I participated in was  
7 one in which I took injections once every three  
8 hours for a period of three months. The people  
9 administrating the test never told me anything  
10 about what was going on.

11 I didn't know what substance they were  
12 injecting or what they were trying to find out.  
13 Usually they injected me in the buttocks because  
14 that was the easiest place, but they also injected  
15 me in other places as well.

16 These injections made my buttocks swell  
17 up like balloons, which was very painful.  
18 Sometimes, though, because of all the injections,  
19 my buttocks would be numb.

20 I kept going back for shots because I  
21 received approximately \$2 for each shot.

22 A third experiment I participated in was  
23 the Army LSD test. For this experiment I was  
24 taken out into the Army trailers. I wasn't told  
25 that the substance they gave me was LSD, but I

1 assumed that it was because of the effect it had  
2 on me.

3 They also never told us what the LSD  
4 would do to us. I assumed it was like marijuana  
5 or heroine and that the drug would affect me for a  
6 while, but wear off eventually.

7 I remember sitting on a bed in the Army  
8 trailer watching TV. I don't remember much else  
9 of what happened. I don't even remember eating  
10 during that time. I knew that I wasn't right in  
11 the head, however.

12 Another experiment in which I was a  
13 subject was one that I call the "sight" test.  
14 Four dots were put on my shoulders and then my  
15 eyesight would go almost completely blind. Just  
16 as this happened, they would give me a shot and it  
17 would bring back my eyesight.

18 The last experiment I recall  
19 participating in was a toothpaste test. Before  
20 the experiment they told us that they were trying  
21 to figure out which toothpaste worked the best. I  
22 had to brush my teeth with the toothpaste they  
23 gave me.

24 The toothpaste tasted like mouthwash and  
25 I had to dilute it a little so it wouldn't tingle

1 in my mouth quite as badly.

2 During all of these experiments I never  
3 saw a doctor. Inmates who wore nurses' jackets  
4 were the ones who administered the tests. They  
5 looked like they were official because they were  
6 wearing the white jackets, so I didn't question  
7 what was going on.

8 I signed a consent form before each  
9 experiment, but I never understood what it meant.  
10 They did not explain to me before each test what  
11 they were going to do or what effects I should  
12 expect.

13 I thought that signing that form meant  
14 that I allowed them to do the experiment on me.  
15 At the time I just felt lucky to be doing the  
16 experiment because it meant I could earn some  
17 money.

18 The money was the biggest reason I  
19 participated in these experiments. I wanted to  
20 get all of the money I could to send home to my  
21 mother. She was a widow and had a hard time.

22 I also used the money to buy things at  
23 the commissary such as cigarettes, ice cream, or  
24 candy. Sometimes my mother would send me a little  
25 bit of money when she could, but really the money

1 from the experiments was my only income.

2 I also participated in these experiments  
3 so that I could get out of sweeping and mopping in  
4 the block. Doing the experiments meant that I  
5 could get away from the guards and other inmates  
6 and just be left alone.

7 I also thought it was special to get to  
8 watch TV for a while, which is what we got to do  
9 in the Army trailer during the LSD test.

10 After I got out of prison, my mother  
11 finally took me to Embreeville State Hospital. At  
12 the hospital, Dr. Leroy N. Foster, a psychologist,  
13 examined me.

14 This was on August 26, 1964. The doctor  
15 said that I had mild schizophrenic schizoid  
16 characteristics and that I lacked an adequate  
17 sexual identification.

18 He said I was lost under the moments of  
19 stress and he suspected impulse problems.

20 Because I am a veteran of World War II  
21 and the Korean War, I have attended the VA  
22 Hospital in Philadelphia. My other medical  
23 records regarding things such as my eyesight are  
24 there.

25 I never saw the prison doctor while I was

1 in Holmesburg. I have been out of Holmesburg  
2 Prison for over 30 years. I think about these  
3 experiments and what they did to me all the time.  
4 In this time, I have never really been able to  
5 keep a job because my mind drifts and anything can  
6 upset me.

7 Before the tests I considered myself a  
8 pretty happy person. I was talkative and  
9 friendly. Now I have bad nerves and I'm not  
10 really happy.

11 I believe my lack of attention and bad  
12 nerves are because of the LSD test I participated  
13 in while in Holmesburg Prison.

14 I can still see the places where the  
15 patch test was administered on my arms, legs, and  
16 back.

17 My skin there is discolored, and it is  
18 insensitive to touch. My teeth started falling  
19 out in 1969 and now I wear dentures. I believe  
20 this is because of the toothpaste test I was  
21 involved in at Holmesburg.

22 I also have glaucoma that I believe is  
23 related to the "sight" test that I was given while  
24 in prison. Since the tests, my stomach has hurt  
25 everyday.

1           Now I can't believe how foolish I was to  
2 participate in experiments like these. I never  
3 thought about taking any action against the prison  
4 or the University of Pennsylvania before now  
5 because I figured nothing could really be done.

6           Since the time I answered Mr. Hornblum's  
7 article in the newspaper I have learned that there  
8 are other people who are in the same situation as  
9 me because of the University of Pennsylvania's  
10 experiments.

11           Now, I want to know what happened to me  
12 during those tests; in particular, I want to know  
13 what was in the shots that I was given during the  
14 experiments.

15           I want the University of Pennsylvania and  
16 others to know that they shouldn't have done what  
17 they did.

18           THE CHAIRPERSON: Thank you. Mr. Harper  
19 is the next testifier.

20           MR. HARPER: My name is William Harper.  
21 I live at 1828 West Thompson. I am 63 years old.  
22 I was in Holmesburg Prison between 1964 and '67.

23           During this time, I participated in one  
24 study and worked in the dermatology laboratory for  
25 the University of Pennsylvania.

1           I never participated in a University of  
2 Pennsylvania experiment as the subject until near  
3 the end of my stay in prison in 1967.

4           I was in contact with the studies before  
5 that time because I worked in the dermatology  
6 laboratory. I had never had any medical training  
7 before I started working in the dermatology  
8 laboratory in the prison for the University of  
9 Pennsylvania. I only went to the eleventh grade.

10           I was trained to work in the dermatology  
11 laboratory by other inmates by the name of  
12 Charlie Frye and Benny Trimel, who had already  
13 been working there. We were the three guys who  
14 worked in the dermatology laboratory. And our  
15 supervisor or director was named Solomon McBride.

16           I learned to make solutions and  
17 ointments, to occlude areas for blisters. I  
18 learned to punch a biopsy suture. I also learned  
19 to take blood, to use the autoclave, an incubator,  
20 and the metric system.

21           We were only told certain -- we were only  
22 given information for the protocol. And that's  
23 what we did. We weren't told what they did with  
24 the results or what they were looking for in the  
25 study. We only knew our part of the study.

1           In the laboratories we did dandruff  
2 studies, blister studies, elliptical and punch  
3 biopsies and also injections. We would use  
4 zolocaine to anesthetize the area that we were  
5 going to use.

6           I collected cerebrum levels from people's  
7 heads. We did radiation studies. There were  
8 creams that weren't labeled by name, only by code  
9 numbers. We helped administer sweat studies and  
10 we also did skin scrapings.

11           Sometimes for studies we used drugs like  
12 DMSO and SLS on guys. I became what I called a  
13 blister expert. As I did these things, there was  
14 not a doctor present.

15           The prison doctor knew what was going on  
16 and didn't interfere with the experiments unless  
17 there was an emergency.

18           After we had done the experiments, we  
19 were told to print out the results and send them  
20 to Dr. Kligman or to the director, Mr. McBride.  
21 We also did the billing for the study.

22           When I began working for the University  
23 of Pennsylvania in the dermatology laboratory in  
24 Holmesburg Prison, I was getting paid \$25 per  
25 month. I got raises as I continued working there.

1 And when I left, I was getting paid almost \$100 a  
2 month.

3 At that time, I had been working at the  
4 dermatology laboratories for 16 months. I was  
5 head technician. The money from working in the  
6 laboratories was the only money I received at that  
7 time, except if a relative or friend sent me a  
8 little bit of money in the mail.

9 I did get some special treatment because  
10 of working at this job. I didn't have to stay  
11 locked up in my cell all day. The prison  
12 officials didn't bother me because I worked for  
13 the University of Pennsylvania.

14 We, the laboratory workers, were trusted.  
15 And they seldom searched what we were doing.  
16 Somebody else did our laundry. And we could  
17 arrange to get swags so that we didn't have to eat  
18 prison food all the time.

19 Swags were food, usually hot sandwiches,  
20 but sometimes other things such as steaks, pork  
21 chops, or eggs. And because we had hot plates and  
22 other things like that in the laboratory, we could  
23 make our own food.

24 Guys would bring me this food for keeping  
25 them on the experiments. I remember that at the

1 time everybody wanted to be on the H-block for the  
2 experiments. It was the place to be.

3 The job working with the University of  
4 Pennsylvania consumed my time. I spent my free  
5 time trying to read up on medical information. I  
6 tried to learn all of the words and the protocol.

7 I thought it was an opportunity to do  
8 something worthwhile. I know now that I was  
9 mislead during that time. Even though I worked in  
10 the dermatology laboratory for over a year, I  
11 didn't gain any skills that would have helped me  
12 outside prison.

13 Also, since I've seen other former  
14 inmates who were suffering because of the  
15 experiments they participated in, I realize I did  
16 something wrong.

17 I realize now that I looked the other  
18 way, so to speak, during the studies because they  
19 didn't directly affect me.

20 In 1967, when I was no longer working in  
21 the dermatology laboratory, I was a subject in a  
22 University of Pennsylvania study where they  
23 transplanted my skin.

24 Before they did the transplant, they told  
25 me that they were going to do a blister

1 transplant. I had to sign a paper or release  
2 saying I knew what I was doing and that I was  
3 consenting to the test.

4 That paper had to be signed every time a  
5 test was conducted. They explained part of what  
6 they were going to do to me, but they never  
7 explained what effects this could have on me  
8 before I signed the form.

9 I also wasn't very capable of  
10 understanding what they were explaining because I  
11 didn't know the medical terms they used. There  
12 was never any follow up to this test.

13 Dr. Popper from the University of  
14 Pennsylvania administered the transplant  
15 experiment that I participated. He was Dr.  
16 Kligman's brother-in-law.

17 He put part of my lip on my left arm and  
18 part of my arm on my lip. After the transplants  
19 where my lip had been put on my arm, it would  
20 chafe and sometimes it would swell.

21 I thought they would eventually take it  
22 out. They never did however. And even today, I  
23 still have part of my lip on my arm. At the time,  
24 I felt that it was a simple sacrifice.

25 I was told I'd get \$150, and I wanted to

1 use that money to support my needs. I also wanted  
2 to be able to afford a lawyer. Now I realize  
3 participating in the experiment was a stupid thing  
4 to do.

5 I would like to see some compensation for  
6 the people who were hurt. This case is about the  
7 others really, not about me. I feel bad about  
8 what happened in the studies at the prisons and I  
9 have had to come to grips with my role in it.

10 I feel like I was part of the problem  
11 because I helped do the experiments. I would like  
12 to think I have learned something from this whole  
13 experience. Thank you.

14 THE CHAIRPERSON: Thank you. I have one  
15 question for Mr. Jones. I think you might be able  
16 to answer that. How many identified victims of  
17 the University of Pennsylvania experimentation are  
18 known to be alive today?

19 MR. JONES: Well, we have a little over a  
20 hundred in the group, the experimentation  
21 survivors, which were individuals that  
22 participated in the experiments.

23 There's only a little over a hundred.  
24 But there are scores of others that won't come  
25 forward.

1 THE CHAIRPERSON: So you have identified  
2 a hundred?

3 MR. JONES: Yes.

4 THE CHAIRPERSON: I have one other  
5 question. With the experimentation that took  
6 place there, and your subsequent involvement with  
7 Mr. Hornblum and his book, would you say that the  
8 book that he wrote is accurate and complete as far  
9 as you know concerning what took place at  
10 Holmesburg?

11 MR. JONES: Yes.

12 THE CHAIRPERSON: Would the others of the  
13 panel echo that sound as well?

14 MR. HARPER: Yes.

15 MR. SKORSKI: Yes.

16 MS. ALSTON: Yes.

17 THE CHAIRPERSON: As you may have heard,  
18 he testified that he's been getting reports since  
19 the book that things happened before he was aware  
20 himself. But from what you know of the book  
21 yourself, it's accurate in its descriptions?

22 MR. JONES: Yes.

23 THE CHAIRPERSON: Thank you very much.  
24 I'll turn the questioning over to the members of  
25 the committee. Representative James.

1           REPRESENTATIVE JAMES: Thank you, Mr.  
2 Chairman. And I would like to take the  
3 opportunity to thank all of you, Mr. Jones and the  
4 organization and those of you who have been  
5 victims of experiments for taking the time put the  
6 things together and coming forth and bringing your  
7 testimony.

8           Right after this hit the news back in the  
9 fall, I was contacted by the University of  
10 Pennsylvania. And at that time they gave me a  
11 phone number, an 888 number.

12           They told me to give to you and that if  
13 anybody had any medical problems, that they would  
14 take care of.

15           Has that been happening?

16           MS. ALSTON: I can answer that question.  
17 I went to a conference a couple weeks ago with one  
18 of the survivors and myself. And it was one of  
19 those question -- she brought out subjects,  
20 topics. And then you had a question and answer  
21 portion of it.

22           And I asked a question on this subject,  
23 on the testing and on, you know, this and, in  
24 other words, what was she going to do.

25           And she gave us the one 1-800 number to

1 call and things would be taken care of through the  
2 1-800 number. So the next day when I got home, I  
3 called the 1-800 number.

4 On the 1-800 number they put you through  
5 a switch board and then through another person.  
6 And this is what they ask you, they want to know  
7 what is your specific problem?

8 The next question is, what type of  
9 insurance do you have? When you tell them that  
10 you don't have any insurance, that your  
11 understanding was that the problem was started by  
12 the University of Pennsylvania and you feel as  
13 though they should -- and they said no, give us a  
14 specific name.

15 So, I gave them the lady's name that  
16 spoke. And they told me they knew nothing about  
17 her, that if I didn't have insurance, they  
18 couldn't treat me.

19 REPRESENTATIVE JAMES: That was as a  
20 result of dialing this 888?

21 MS. ALSTON: 1-800-787 whatever,  
22 whatever.

23 REPRESENTATIVE JAMES: Thank you.

24 THE CHAIRPERSON: I want to thank you who  
25 came here to testify. We appreciate your input.

1 And just as a matter of explanation, public  
2 hearings of this sort are oftentimes held about  
3 specific legislation, although that was not the  
4 case today, but specific legislation may result  
5 and has from the hearing and testimony that was  
6 presented today.

7 The members of the Judiciary Committee  
8 who are not present today will all receive copies  
9 of your testimony. There are I believe 26  
10 members. So, we will make sure that they get  
11 copies. And they will be encouraged to read that  
12 and to know what happened here today.

13 And I want to thank Representative James.  
14 It was at his suggestion that we have this  
15 meeting. I am sure he is doing his best to follow  
16 up. I would suggest you contact Representative  
17 James and ask him to help in your cause.

18 I want to thank all of you for coming.  
19 And as I mentioned earlier if you are in need of  
20 any copies of anybody's testimony, if there is some  
21 still available, you can help yourself to it.

22 If not, before I leave or before Dave  
23 Bloomer, my assistant, leaves, you may want to  
24 give him your name and address. We will provide  
25 you with the testimony.

1                    Since we have no further witnesses, I  
2 will declare this meeting adjourned. Thank you.

3                    (At or about 4:10 p.m. the hearing  
4 adjourned.)

C E R T I F I C A T E

I, Michelle S. Parke, Reporter, Notary Public, duly commissioned and qualified in and for the County of Lancaster, Commonwealth of Pennsylvania, hereby certify that the foregoing is a true and accurate transcript of my stenotype notes taken by me and subsequently reduced to computer printout under my supervision, and that this copy is a correct record of the same.

This certification does not apply to any reproduction of the same by any means unless under my direct control and/or supervision.

IN WITNESS WHEREOF, I have hereunto set my hand and seal of office this 18th day of February, 1999.

  
Michelle S. Parke, Notary Public  
My commission expires  
November 12, 2002.
