1                   CHAIRMAN MAITLAND: Good morning,  
2 ladies and gentlemen. I would like to call this  
3 meeting of the House Judiciary Committee Task Force  
4 on Internet and Technology Law to order.

5                   I am State Representative Steve  
6 Maitland of the 91st District located in Adams  
7 County, beautiful Gettysburg, Pennsylvania. I'm  
8 Chairman of the Task Force. On my left is John  
9 Cherry. He is a staff Member of the House Judiciary  
10 Committee. And to my right, Representative Allan  
11 Egolf who is the prime sponsor of the bill of the  
12 day, House Bill 10.

13                  I would like to begin with a statement  
14 from Representative Egolf about House Bill 10 and  
15 the issue at hand today. Representative Egolf.

16                  REPRESENTATIVE EGOLF: Thank you, Mr.  
17 Chairman. I want to thank, first of all, all of you  
18 that are here, both in the audience but particularly  
19 the individuals who are going to testify today. I  
20 really appreciate it. Thank you for taking the time  
21 and effort to come here, some of you from long  
22 distances, and to discuss here today with us this  
23 important issue of protecting our children who use  
24 the Internets in schools and libraries, who  
25 unfortunately from those on those Internets are able

1 to access obscene material and harm for the minors.

2 I want to give you a little bit of  
3 background leading up to this. It was certainly  
4 becoming obvious to many of us, but the Family  
5 Research Council investigative report, it was  
6 released March 15th of 2000 in Washington, D.C.,  
7 revealed what many of us were seeing happening.

8 They said, "There's a sea of evidence  
9 that Internet pornography and related sex crimes are  
10 a serious problem in America's libraries, and we've  
11 only uncovered the tip of the iceberg due to the  
12 efforts unfortunately, due to the efforts of the  
13 America Library Association to chill the facts.

14 Also a study for digital media forum  
15 found that 92 percent of adults surveyed said that  
16 pornography should be blocked on school computers;  
17 74 percent think the government should ban on-line  
18 pornography out right."

19 We, therefore, introduced a Child  
20 Internet Protection Act last session as House Bill  
21 2324. The Judiciary Committee held one hearing in  
22 southeastern Pennsylvania; Media, Pennsylvania.  
23 After it was reported out of committee, we had much  
24 discussion and debate on the floor of the House. It  
25 passed the House 177 to 15.

1           Unfortunately, it was very late in the  
2 session. And because of the lateness and also the  
3 very effective lobbying effort by the America  
4 Library Association, through their local librarians  
5 who contacted their Representatives and Senators,  
6 and did a very good job at doing that.

7           And, unfortunately, though, we are  
8 disseminating, I think, a lot of misinformation.  
9 Because of both those factors, the bill was not  
10 brought up for a vote before the end of session in  
11 the Senate. So we reintroduced the bill as House  
12 Bill 10, and in the Senate with -- as the prime  
13 sponsor, Senator Piccola, Senate Bill 583 which is  
14 virtually identical to House Bill 10.

15           We decided, since there was a lot of  
16 misinformation that's been disseminated and concern  
17 raised in the minds of Representatives and Senators,  
18 we thought it would be very prudent to hold another  
19 hearing to attempt to allay some of those concerns.

20           And I would like to give you just a  
21 little bit of background of where we are going  
22 today.

23           First of all, and this has been  
24 verified by the ALA officials, America Library  
25 Association's official position on this subject is

1 that, "The rights of users who are minors shall in  
2 no way be abridged. Libraries must support access  
3 to information on all subjects regardless of the  
4 user's age or the content of the material."

5 Some of those claims that we hope to  
6 hear testimony on today, some of those claims that  
7 they've been making, first of all, that there have  
8 been few complaints and that the accessing of  
9 pornography on the Internet is simply not a problem.

10 Another one is that filters are too  
11 restrictive, that they won't allow legitimate  
12 research. For example, the examples generally given  
13 are that you try to research breast cancer,  
14 information on breast cancer, you wouldn't be able  
15 to do so. Also, if you are looking -- say you're  
16 doing a history report on Middlesex, England. You  
17 would not be able to access it because the filter is  
18 blocking it. And that hopefully again today we will  
19 find that that is not the case. It may have been in  
20 the past, but not now.

21 Also, some other misinformation, that  
22 filters don't filter enough, they're too easy to  
23 circumvent. Also, that filters are too expensive  
24 and they're too costly to maintain and update.

25 Another one is that all libraries have

1 acceptable-use policies in place, when really some  
2 of those acceptable-use policies just state that  
3 there will be no restricting of access.

4 And others such as providing computer  
5 screens or separate rooms for adults to use the  
6 computers are adequate solutions. And I guess the  
7 point that allowing complete unrestricted access is  
8 more important than protecting our children.

9 So that's what we hope to discuss  
10 today and learn from experts in many different  
11 areas. As you can see from the schedule, we have  
12 quite a diverse group of testifiers. And I am  
13 confident that we will hear some excellent and very  
14 beneficial testimony today.

15 So thank you for being here. Thank  
16 you, Mr. Chairman.

17 CHAIRMAN MAITLAND: Thank you,  
18 Representative Egolf.

19 I would like to ask Rich Bowra and  
20 Cynthia Richey of the Pennsylvania Library  
21 Association to come to the mike.

22 REPRESENTATIVE JOSEPHS: Mr. Chairman,  
23 I'd like to say something before we begin.

24 CHAIRMAN MAITLAND: Representative  
25 Josephs.

1           REPRESENTATIVE JOSEPHS: I am grateful  
2 that the maker of this bill is here, because I have  
3 a number of questions I would like to ask him. But  
4 when I looked over this agenda, I was really  
5 surprised and disappointed that we do not have  
6 somebody testifying who is a neutral expert on  
7 computer filters, somebody from a group like  
8 computer scientists or social responsibility or one  
9 of those nonprofit groups which has no particular  
10 interest in this subject matter and could answer in  
11 a neutral way some of the questions that have come  
12 up that were just summarized, I think, quite  
13 succinctly and comprehensively by the maker of this  
14 bill.

15           And I would volunteer to the Chair of  
16 this Committee and, of course, we would have to  
17 check with the Chair of the whole Committee, to find  
18 some such person who would be acceptable to all of  
19 us and either in some way to get the testimony of  
20 that person, either in writing or another little  
21 short hearing or some sort of a thing along those  
22 lines.

23           So if Chairman Maitland would allow me  
24 to work with him on that, I would be very  
25 appreciative. And I think we would get a better

1 quality of information so that we could make a  
2 decision that would be a better decision on this  
3 legislation.

4 CHAIRMAN MAITLAND: Thank you,  
5 Representative Josephs. I think Professor Frieden  
6 who is scheduled to testify at 12:20 can speak to  
7 this issue somewhat. But if you would like to have  
8 further testimony beyond that, we will attempt to  
9 get that after the hearing today.

10 REPRESENTATIVE JOSEPHS: Thank you.

11 CHAIRMAN MAITLAND: Okay. Let's have  
12 Mr. Bowra and Mrs. Richey, please begin at your  
13 leisure.

14 MR. BOWRA: Good morning.

15 CHAIRMAN MAITLAND: Good morning.

16 MR. BOWRA: I appreciate the  
17 opportunity today.

18 My name is Rich Bowra. I'm Executive  
19 Director of the Dauphin County Library System in  
20 Harrisburg, Pennsylvania. We represent eight  
21 libraries that have a mix of rural, urban and  
22 suburban settings.

23 And I am here with the Pennsylvania  
24 Library Association. However, our President, Jack  
25 Sulzer, from Penn State was not able to be here

1 today, and there is some testimony from Mr. Sulzer  
2 that has been supplied to this Committee in advance  
3 of this meeting.

4 Cynthia Richey is Director of the Mt.  
5 Lebanon Public Library. As I said, I'm Director of  
6 the Dauphin County Library System. And we are here  
7 to give a little bit of a perspective, some  
8 experiential background from the public library  
9 perspective.

10 Clearly, as has been said by a lot of  
11 people, the Internet is an extremely powerful tool.  
12 All kinds of things can be accessed at this point.  
13 And library users use the Internet for many reasons,  
14 whether they're researching a medical condition,  
15 doing a book report, looking for consumer  
16 information, getting guidance in selection of a new  
17 vehicle or whatever. It has been an extremely  
18 powerful and effective tool.

19 We have for many years been working  
20 with a State program called the Power Library in  
21 public and school libraries across the Commonwealth.  
22 The Power Library is a State program through  
23 Governor Ridge that allows access by these libraries  
24 to more than two thousand journals with full text  
25 articles, health information, encyclopedias,

1 dictionaries, things of that sort, and has been  
2 instrumental in providing timely information to our  
3 patrons.

4 In addition to that, our library  
5 system subscribes to a number of other informational  
6 databases on the Internet, and we're very  
7 discriminating on our home page to have some  
8 preselected links that we feel are very useful and  
9 appropriate for our library patrons.

10 Most recently at our East Shore  
11 library, which is our main library in Dauphin  
12 County, we were host to PennDOT that did a press  
13 conference on their Internet access to motor vehicle  
14 registration and licensing, showing another  
15 important power of the Internet.

16 However, all of that being said,  
17 librarians are very much aware and very cognizant of  
18 the fact that while the information on the Internet  
19 is a very powerful tool, there are a lot of  
20 challenges that librarians have to meet.

21 I have been in this profession about  
22 27 years, and I would not hesitate to say that this  
23 is probably one of the most difficult issues that I  
24 as a public library administrator have ever had to  
25 deal with.

1           And I think it's great that in a  
2 situation like this today we are getting a number of  
3 the parties and players together to really talk  
4 about this issue, and talk about this issue in some  
5 greater detail. Because rather than it being any  
6 kind of a confrontational issue, I think that it's  
7 important for this Committee to understand that  
8 librarians have been wrestling with this for a long  
9 time. They take this issue very seriously.

10 Protecting children from inappropriate sites is  
11 extremely important to us. And I think the dialogue  
12 is very valuable to see what might be a solution  
13 that would work well for all.

14           Most recently, again probably about a  
15 week or so ago, the Governor and Mrs. Ridge held a  
16 press conference where they released some  
17 information for families and children on Internet  
18 safety. I think that's a very important step as  
19 well, and I certainly commend them for doing that.

20           What's challenging for us right now,  
21 not only on the State level, is also on the Federal  
22 level, as you are well aware, there is Federal  
23 legislation pending on Internet access as well. It  
24 will be very interesting for us as librarians to see  
25 how these two pieces may play out, how they may

1 complement or supplement one other. And I think  
2 that's going to be a very important principle to  
3 watch.

4 One of the most important pieces of  
5 our approach in the Internet in our public library,  
6 and we have had Internet access probably about five  
7 years at this point, is to have the Internet  
8 acceptable-use policy. And that has been alluded to  
9 earlier in the discussions this morning.

10 Library boards, we have a library  
11 board of 17 members from Dauphin County, adopt  
12 library policies for our system. There are a number  
13 of policies that they adopt, including patron  
14 behavior -- and oftentimes Internet use can be a  
15 patron behavior issue -- use of meeting rooms,  
16 library material selections, donations, emergency  
17 procedures and so forth.

18 And the Internet policy is another  
19 policy that our board has very much been involved  
20 in. In our policy -- and as you well know, in the  
21 Commonwealth of Pennsylvania it is State law that  
22 all public libraries have an acceptable-use  
23 policy -- we are very clear and very precise in that  
24 policy that restricts any access to anything that's  
25 obscene, child pornography or harmful to minors.

1     Anyone who would go in those sites is subject to  
2     legal and/or revocation of library privileges.

3             Some of the things that we've done --  
4     and we have worked over years to try to work towards  
5     handling this very sensitive issue in a number of  
6     different ways -- we have held and continue to hold  
7     Internet safety classes for parents and children to  
8     teach them about the Internet.

9             And those classes are not just for  
10    using the Internet in the library, but also when  
11    parents are working with their children using the  
12    Internet at home; how to be careful about not giving  
13    out personal information, the danger of chat rooms,  
14    the danger of certain sites.

15            We see that oftentimes people will  
16    say, well, with the Internet, what does that mean  
17    for the future of the public library. We see  
18    ourselves as guides to really help people use this  
19    powerful resource. And it goes far beyond the issue  
20    of inappropriate sites.

21            One of the issues we deal with on a  
22    regular basis, there are sites that deal with health  
23    information, other factual information, that if  
24    someone is not discriminating in their use of this  
25    tool, may get very inaccurate and misleading

1 information. So we try to work on that issue as  
2 well.

3 So the safety classes that we do are  
4 very, very important.

5 We have moved to a policy where we  
6 have parents sign a library application card about  
7 their child's ability to access Internet resources.  
8 We also do Internet training in general for the  
9 public; basic Internet, intermediate, advanced; and  
10 then Internet searching on health issues, genealogy,  
11 fund-raising and things of that sort.

12 One of the other measures that we put  
13 into place recently that appears to be working quite  
14 well are customized children's terminals where we do  
15 preselected links of age-appropriate,  
16 content-appropriate materials for the children in  
17 our library system.

18 Part of that, our Internet terminals  
19 in the children's area and in the adult area is a  
20 click-on of our policy. For anyone to proceed, they  
21 have to have read the policy. And we have for  
22 children altered the wording in a way that is much  
23 more understandable to our younger patrons. But  
24 there's so substitute at all certainly for a parent  
25 working with their child on resources of this kind.

1           Another very important component of  
2 this, however, is to have trained library staff.  
3 Long before the Internet, library staff, whether it  
4 be term called readers advisory staff, reference  
5 staff, children's librarians, worked with our  
6 patrons to access information that they needed to  
7 meet their needs. We train our staff to work with  
8 that same issue with the Internet, to guide people  
9 to sites that are appropriate for their  
10 informational needs, to assist patrons.

11           Just as we have the patron behavior  
12 policy, we monitor patron behavior in the library  
13 and use of library resources, that any violation of  
14 the policy is certainly dealt with in an appropriate  
15 manner. So the whole issue of staff training is  
16 very important here as well.

17           There is no doubt that this is a very  
18 difficult and challenging issue. And speaking on  
19 behalf of our library system and also from our State  
20 Association, it's very important for us to work with  
21 folks such as those around this room, because we  
22 would in a heartbeat want to work on something that  
23 is going to work well for all parties concerned.

24           I think that's the biggest challenge  
25 here, because what has happened in monitoring this

1 from where I sit, there have been libraries where  
2 they have done filtering at all of their terminals,  
3 for that to be their local policy, that have been  
4 successfully sued by groups that are against library  
5 filtering. Similarly, there are libraries that  
6 don't filter that have been sued for not filtering.

7 And I think it's just important for  
8 everyone to keep in mind that we are here to work  
9 with families, work with children, work with parents  
10 to give them quality appropriate information. And  
11 this, indeed, is a challenge for us, and we look  
12 forward to working with this group and any other  
13 resources that might be available to come up with a  
14 solution that we feel fits all needs quite well.

15 I thank you for your time.

16 CHAIRMAN MAITLAND: Thank you, Mr.  
17 Bowra. Mrs. Richey.

18 MS. RICHEY: Good morning. I am  
19 Cynthia Richey, and I was a children's librarian for  
20 25 years before becoming the Director of the Mr.  
21 Lebanon Public Library in 1996. I also chaired the  
22 Internet Access Committee of the Electronic  
23 Information Network of Allegheny County. And the  
24 eiNetwork is a consortium that provides shared  
25 library catalogs, databases and Internet access to

1 more than 40 libraries throughout the county.

2 I'm also past President of the  
3 Pennsylvania Library Association and currently am  
4 Chair of the Internet Use in Libraries Committee for  
5 PALA. And we're working on materials for our web  
6 site that will help guide libraries in their quest  
7 to help their constituents.

8 I am very pleased to have the  
9 opportunity to appear before you today to talk about  
10 Internet use in public libraries.

11 My statement makes five points, and I  
12 would like to summarize those for you now.

13 As you've heard, the Internet has  
14 transformed public library service. Our libraries  
15 are no longer limited by their walls. They are able  
16 to expand their missions by providing our citizens  
17 with access to extensive information crucial to  
18 their lives, as well as access to the best of human  
19 thought and expression. As Rich articulated, Power  
20 Library from the State is one of the best examples  
21 of that.

22 But the real benefit of this access,  
23 Internet access, in the public library is the  
24 trained dedicated staff skilled in helping people  
25 navigate, find the information they need and

1 determine the validity of that information.  
2 Librarians are conduits in the delivery of  
3 information.

4 In my library we've helped people find  
5 information on ladybug infestations, the  
6 availability of jobs in the South Pacific, Lyme  
7 disease and Ojibwa the word for bear.

8 The second point I'd like to make.  
9 We know, however, that the Internet is not without  
10 its problems, that there are sites inappropriate for  
11 children. Not everyone is surfing the Library of  
12 Congress or exploring the Louve, but we also know  
13 that since 1995 when Internet access became  
14 available to the libraries in Allegheny County, we  
15 have had few problems. Our computer histories show  
16 us that.

17 We acknowledge that we've had some  
18 problems, but librarians have always had some  
19 problems. Those are behavior problems, and we treat  
20 those and manage them as we have all behavior  
21 problems. It's a canard that young people are  
22 accessing inappropriate sites for hours on end every  
23 day in our libraries or that they are continually  
24 exposed to them. That is inconsistent with our  
25 experience in Allegheny County and, as I hear, from

1 other parts of Pennsylvania as well.

2 The third point, we manage Internet  
3 use very carefully. Our policies and practices  
4 enable us to do that. Our library boards and staffs  
5 care deeply about children and their Internet use.  
6 We are partners with parents, teachers and others to  
7 promote positive Internet experiences. This is the  
8 primary reason that we have so few problems and  
9 complaints.

10 Our Internet use policy is the  
11 strongest statement about our care. Each library  
12 has such a policy as a requirement for the increased  
13 State funding, and we thank you again for that large  
14 S. These policies were developed specifically to  
15 meet local needs and were developed with community  
16 participation. All policies prohibit misuse of the  
17 library computers for illegal activities, as well as  
18 for the other things that Rich articulated when he  
19 discussed the Internet access policies; obscene,  
20 child porn, harmful to minors and anything that is  
21 explicit as referred to in our own Pennsylvania  
22 statutes.

23 We actively enforce our policies.  
24 They allow us to act quickly and forcefully if  
25 necessary to assure responsible use of the Internet.

1 They allow us to go to beyond the  
2 tap-on-the-shoulder management technique that  
3 librarians have used for many decades.

4 Our libraries also use other measures:  
5 Computers in high traffic areas; monitoring use by  
6 walking around; requiring parental permission or  
7 presence; logging on with a librarian; establishing  
8 time, place and manner restrictions; and one of the  
9 most successful, specially designed web sites for  
10 children and teens that incorporate child-friendly  
11 sites, as well as information for parents.

12 Sometimes we have notebooks beside  
13 every computer. These notebooks have information  
14 for parents on how to help guide their children. We  
15 use sites such as the Collaborative Get Netwise, a  
16 collaborative effort for Internet education; or Kids  
17 Connect and Families Connect from the American  
18 Association of School Librarians. These help  
19 parents teach children to be Internet smart, as they  
20 teach them to be street smart. And librarians do  
21 that, too.

22 And some libraries already selectively  
23 use site blocking or filtering software. My own  
24 library, Mt. Lebanon, doesn't use filters. The  
25 board and the community determined the flaws

1 outweigh the benefits. Filters provide a false  
2 sense of security, and we decided we could not hold  
3 ourselves out as having made the Internet safe. But  
4 that was a decision that we made locally, and our  
5 community helped us make it.

6 Inappropriate sites were allowed  
7 through by the filter tests. Legitimate sites  
8 blocked; CNN News, ESPN, Amnesty International,  
9 Southern Poverty Law Center, The Supreme Court, rape  
10 crisis centers, Congressional Candidate Jeffrey  
11 Pollick's site, and of course Dick's Sporting Goods  
12 and Beaver College.

13 My fourth point. As evidenced by the  
14 success of these other measures I've mentioned in  
15 managing Internet access, our local library boards  
16 and library staffs have not abrogated their  
17 responsibility to their communities.

18 On the contrary, they are  
19 conscientious. They know their communities and work  
20 with library staffs to effectively manage Internet  
21 access while respecting people's right to  
22 information. Moreover, our communities believe that  
23 local decision-making is of paramount importance in  
24 a Democratic society.

25 Fifth point. All of us want Internet

1 use in public libraries to be a positive experience  
2 for young people. As you do, we all care about  
3 children. Many of us are parents ourselves, and we  
4 would not advocate anything that would harm them.  
5 Libraries provide the benefits of the Internet.  
6 This is what we are doing now. It is part of our  
7 mission, and we take that very seriously.

8 I thank you for the opportunity to  
9 talk to you today and work with you in the future to  
10 forge an appropriate solution.

11 CHAIRMAN MAITLAND: Thank you for your  
12 testimony. Are there any questions? Representative  
13 Josephs.

14 REPRESENTATIVE JOSEPHS: Mr. Chairman,  
15 you anticipated me. Thank you.

16 I think this is for either one of you.  
17 And I think my last question probably cannot be  
18 answered here, but I would be interested in getting  
19 something perhaps in writing later.

20 How many sites do you figure, how many  
21 URLs do you figure, there are out there?

22 MS. RICHEY: Millions.

23 MR. BOWRA: I would agree.

24 MS. RICHEY: There are millions.

25 Scientific American had an article not long ago

1 about the millions of sites and the fact that  
2 millions are added constantly around the world.

3 REPRESENTATIVE JOSEPHS: Or changed.

4 MS. RICHEY: They mutate quickly, yes.

5 REPRESENTATIVE JOSEPHS: The last  
6 number I saw was in a paper that was posted by this  
7 group that I mentioned before, Computer Sciences For  
8 Social Responsibility. The number was two years  
9 old, and they were guessing 18 million.

10 MS. RICHEY: Yes.

11 REPRESENTATIVE JOSEPHS: Are you aware  
12 of the fact -- and you might have to go back and  
13 take some time later and look at the bill -- that  
14 the sponsor of the bill, the maker of the bill,  
15 being a reasonable person and listening to  
16 objections, has removed from the bill the sanction  
17 of defunding from school libraries, but has not from  
18 public libraries. Do you have any reaction to that,  
19 either one of you?

20 MR. BOWRA: We are aware of that, and  
21 we would certainly be curious to understand the  
22 basis for the differentiation between the two.

23 REPRESENTATIVE JOSEPHS:  
24 Unfortunately, these aren't set up for you to ask us  
25 questions. But I am rather interested myself,

1 because it would seem to me that if any sanction was  
2 going to be removed, it ought to be in the other  
3 direction. Public libraries have many adult users  
4 who, it seems to me, ought to be able to access  
5 almost anything they want, so long as they are not  
6 drawing minors into that access.

7           However, my last question, which I  
8 would really like to see something in writing if you  
9 can. The filters cost something. I wonder how much  
10 that might cost, for instance, each one of your  
11 systems, their updating as well.

12           The bill calls for an expedited  
13 procedure for people who are denied the opportunity  
14 to disable the filter on the computer that they are  
15 using. I'm wondering what you think those personnel  
16 costs out to be. And there's also a provision for  
17 people who are denied after this procedure the right  
18 to disable the filter to appeal to Common Pleas  
19 Court. I'm wondering what you think your legal fees  
20 might end up being over, let's say, some course of  
21 time, all of these things, over some course of time  
22 after this passes, if it should pass.

23           MS. RICHEY: I'm sure they would be  
24 enormous, especially the legal fees.

25           REPRESENTATIVE JOSEPHS: Since I'm a

1 lawyer, I think that's a really good idea myself in  
2 the abstract. But if you could send us something  
3 and direct it to the Chair of the Committee.

4 We just made an enormous effort, and I  
5 think a very good one, to fund the libraries so they  
6 would be brought up to the State of the art of  
7 States that are around us. I voted for that and I  
8 supported that all the way through. And now I would  
9 hate to see whatever we might have done to improve  
10 your collections and your physical surroundings  
11 turned into legal fees, even though that's sort of a  
12 conflict of interest for me.

13 CHAIRMAN MAITLAND: Representative  
14 Egolf.

15 REPRESENTATIVE EGOLF: Thank you, Mr.  
16 Chairman. Thank you for your testimony, and I  
17 believe both of you are very sincere in being  
18 concerned about the problem and wanting to do  
19 something about it. But I have to ask you, for both  
20 of you, do you agree with ALA's official position on  
21 this matter, that there should be access to all  
22 material, no matter the content, to all people, no  
23 matter the age. Do you agree with that?

24 MR. BOWRA: Let me speak for the  
25 Dauphin County Library System, in that there have

1       been a wide spectrum of positions that groups have  
2       taken on this issue, from very strong in terms of  
3       the free access to the other side of the coin.

4                   What we have done with our local board  
5       and with our local community is to acknowledge up  
6       front that this is an issue that is not going to be  
7       resolved on either extreme of the spectrum, that  
8       there are clearly legitimate arguments on both  
9       sides. It is a very complex issue.

10                   And what we're trying to work with  
11       with our policy and our board and our local  
12       community is -- I don't know if the term middle  
13       ground is the appropriate way to go. I think the  
14       best way to say this is what is the best way that we  
15       can preserve access for those who have -- and this  
16       is always a dangerous term, to use legitimate sites  
17       that they need to get to that are not against the  
18       policy, and to meet the needs of our constituents  
19       and to do that in the most safe and effective way.

20                   Our library system has intentionally  
21       and conscientiously not taken a position either way  
22       on either extreme because that is not our position.  
23       Our position is we need to work together to come up  
24       with something that is effective. And I think there  
25       has got to be, working with folks around this room

1 and others, some way to try to get the best of both  
2 worlds that's going to ensure the safety of  
3 children, families and everyone concerned.

4 MS. RICHEY: I can tell you what the  
5 American Library Association does with regard to  
6 Internet access and children. They provide a list  
7 of 700 great web sites that are wonderful for  
8 children, child-friendly. They select notable  
9 children's web sites every year. They have a book  
10 about drafting Internet policies for children's  
11 libraries. They have a program in place for  
12 librarians working with children on using cyberspace  
13 and educating parents about parental control  
14 measures that they can use at home. They do a lot.

15 REPRESENTATIVE EGOLF: May I  
16 interrupt, because I know we are time constrained.  
17 That doesn't really answer my question. I'm really  
18 concerned. I'm concerned that you're saying two  
19 sides, they're extreme. But the America Library  
20 Association is your organization that you work  
21 under, and they come out with that statement and  
22 they verified -- I questioned -- I was just  
23 incredulous to hear their position, and I questioned  
24 them at a previous hearing. And they verified that  
25 that is their position, there should be no

1 filtering.

2 Now, both of you say that libraries  
3 are very concerned about this, and I believe you.  
4 But how do you reconcile that with your own  
5 organization? Because we all know that the  
6 leadership, whether it's in business, whether it's  
7 the organization, they set the tone above.

8 And my follow-up question would be if  
9 you don't agree with them, have you ever brought  
10 that objection to them? Do they know? You're  
11 saying all your libraries, I think that's in both  
12 your statements. I think the libraries that you are  
13 aware of in Pennsylvania are concerned about this  
14 problem and want to do something. They are saying  
15 don't do anything.

16 MS. RICHEY: No, that's not my  
17 understanding of what they're saying. They do say  
18 that they care deeply about children and they're  
19 working with libraries to find effective solutions  
20 to the problem.

21 I think to say that the America  
22 Library Association is the organization under whom  
23 we work or to whom we are responsible is not  
24 entirely accurate either. We work with the America  
25 Library Association, the Pennsylvania Library

1 Association, Pennsylvania Citizens for Better  
2 Libraries. We work with a lot of organizations. We  
3 also work with people like you who give us the  
4 funding and people from the State library. So it's  
5 only one part of the group that we actually work  
6 with in developing our policies.

7 MR. BOWRA: I think it's very  
8 important to add to that is I look at the America  
9 Library Association as a resource of many resources  
10 that libraries can avail themselves, and librarians  
11 have the opportunity to avail themselves of what  
12 resources from the Association they feel are  
13 relevant and appropriate to their needs.

14 And I think that's reflected in  
15 Pennsylvania in that libraries throughout this  
16 Commonwealth have a very wide variety of responses  
17 in dealing with the Internet issue. And that while  
18 the National Association for Librarians has a  
19 specific position, as Cynthia pointed out, is by no  
20 means something that's dictated to libraries and  
21 that libraries have the ability with their own  
22 boards and their own local communities to make their  
23 decision. But the American Library Association is  
24 not an overarching policy making body or mandating  
25 anything for the libraries in Pennsylvania to

1 follow.

2 As I said, personally from our library  
3 system, we get a lot of great benefit from some of  
4 the resources that that Association provides. As  
5 our library system, however, we have taken an  
6 approach that is more tempered in manner.

7 MS. RICHEY: And that's my experience,  
8 too, across the country, that each of the libraries,  
9 individual libraries and library systems do tailor  
10 their policies to suit their own community's needs  
11 and desires.

12 REPRESENTATIVE EGOLF: Thank you.  
13 Another question here. Ms. Richey, you mentioned  
14 that your library does not use blocking software as  
15 you've determined that flaws outweigh the benefits  
16 and substantiated by research, filters provide a  
17 false sense of security. What research was done or  
18 what are you using, and how recent is that research?

19 MS. RICHEY: One of the ones that the  
20 library board looked at was the Consumer Report of  
21 March 2001. Another one was done by Montgomery  
22 County Library System, and that was earlier this  
23 year and I can't remember the month. There were  
24 other pieces of research that we did before that,  
25 but I'll give you those two most recent.

1 REPRESENTATIVE EGOLF: Thank you.

2 MS. RICHEY: Ever since we opened, we  
3 opened our new library in the spring of 1997. So  
4 we've been following this monitoring very closely.

5 REPRESENTATIVE EGOLF: Because I think  
6 there's been other research, and I'm hoping we'll  
7 hear some of that today, that refute that, because  
8 technology has been getting better and better. And  
9 at one time I think -- research I've seen, that was  
10 the problem, but that is several years old.

11 MS. RICHEY: This research is new.  
12 The Consumer Reports is March. They are an  
13 independent body, unbiased and not working for  
14 libraries.

15 REPRESENTATIVE EGOLF: I know about  
16 that Consumer Report, and I think there is some  
17 question on their research methods, but again I  
18 think we'll probably hear something later about the  
19 flaws in that research. And I hope that you would  
20 have corroborated this with other research rather  
21 than using just the one. But, anyway, I appreciate  
22 that, that you are basing it on --

23 MS. RICHEY: When we provide you the  
24 list of costs, we can provide you with the list of  
25 data that we used.

1                   REPRESENTATIVE EGOLF: I would  
2 appreciate that. Also, I think you mentioned that  
3 you had very few reports of problems in your  
4 libraries. Do you require reports of problems,  
5 either of you? Do your libraries you're experienced  
6 with require reports of problems, or do they just do  
7 it on a voluntary basis?

8                   MS. RICHEY: It's both. We have  
9 informal complaints and we have formal complaints.  
10 If anybody lodges a complaint, we give them a form  
11 and ask them to fill it out if they tell us about  
12 it.

13                   REPRESENTATIVE EGOLF: I guess in your  
14 library systems, does the main library require the  
15 library branches to report to them when they have  
16 complaints?

17                   MS. RICHEY: I am in an independent  
18 library, but I work in Allegheny County with the  
19 Carnegie Library that has 18 branches, and they do.

20                   REPRESENTATIVE EGOLF: You have a  
21 requirement, you have a standard operating  
22 procedure?

23                   MS. RICHEY: They ask them to submit  
24 reports of problems, yes. But we also collect  
25 anecdotal information, which is where someone comes

1 up to you and tells you something, even if they  
2 haven't written it down. Very few problems.

3 REPRESENTATIVE EGOLF: So it's in your  
4 regulations or requirements that all complaints  
5 would be forwarded up, so you have a central  
6 depository for complaints?

7 MS. RICHEY: Right, whether they're  
8 anecdotal or formal.

9 REPRESENTATIVE EGOLF: Thank you.  
10 Thank you, Mr. Chairman.

11 CHAIRMAN MAITLAND: I have two quick  
12 questions. I hope for quick answers. One is how  
13 does the Power Library address the concerns that  
14 House Bill 10 attempts to address?

15 MR. BOWRA: I don't know that the  
16 answer is that it addresses the concerns per se. My  
17 use of the Power Library was really more of an  
18 example of the power of the Internet and the  
19 informational resources and how they have really  
20 impacted public and school libraries in the  
21 Commonwealth.

22 What would be -- I don't know the  
23 answer to this, but it's certainly something for us  
24 to research, that the Power Library is a list of  
25 commercial databases, nationally accepted,

1 researched encyclopedias and so forth.

2 It would be interesting to look into  
3 the fact that if in those encyclopedia articles or  
4 medical journal articles, there are certain terms or  
5 topics covered, how that might fall into that. It's  
6 a very curious and intriguing question.

7 CHAIRMAN MAITLAND: And then my second  
8 question is what do you do when you are monitoring  
9 children's use of the Internet and you see perhaps a  
10 16-year-old boy, and on his screen is lingerie,  
11 models, Victoria's Secret web site or whatever. And  
12 you walk up and tap him on the shoulder, and he says  
13 he's writing a paper on lingerie for his business  
14 class in high school.

15 How do you handle that situation, when  
16 it is questionable in your mind whether he is  
17 actually doing legitimate research or not?

18 MS. RICHEY: It would be questionable  
19 in my mind, too, whether a lingerie site would be an  
20 inappropriate site as we've defined inappropriate  
21 sites. And it's not for us to determine whether he  
22 has a legitimate reason for looking at lingerie. He  
23 could be looking for something for his mother for  
24 Mother's Day, we don't know.

25 We ask to see their assignments. We

1 ask them if we can guide them and help them. And in  
2 our library, if you want to talk about a real world  
3 experience, a 16-year-old would not be on a  
4 children's computer. Our children's computers are  
5 in the children's library facing the reference desk,  
6 and they have to sign in to use them. And it would  
7 be unlikely that a 16-year-old would go into a  
8 children's library to use our computers.

9 MR. BOWRA: I would just comment in  
10 terms of our use, if there were -- I think Cynthia  
11 addressed the issue of a lingerie site quite  
12 adequately. If there was something that was up a  
13 couple of notches, I guess for the best way to say  
14 it, if there is something of that sort on the  
15 screen, that may well fall under the harmful to  
16 minors or obscene, which is counter to our policy,  
17 and the person would be told to leave that site  
18 immediately.

19 CHAIRMAN MAITLAND: Representative  
20 Josephs, do you have a comment?

21 REPRESENTATIVE JOSEPHS: Yes, I have a  
22 comment. I was interested in a question about the  
23 America Library Association. You and I, sir, and  
24 the Chair here belong to a group too from which we  
25 get resources, and everybody looks at us and says,

1 ah, you are State Legislators. We don't agree with  
2 lots of their policies, different ones, and I think  
3 it's more or less analogous here. Thank you.

4 CHAIRMAN MAITLAND: Thank you both  
5 very much for your testimony. I really appreciate  
6 your time and effort.

7 MS. RICHEY: Thank you. Thanks for  
8 asking us.

9 CHAIRMAN MAITLAND: I would like to  
10 invite Timothy Allwein, Director of Legislative  
11 Services of the Pennsylvania School Boards  
12 Association.

13 MR. ALLWEIN: Thank you. Good  
14 morning. I am Tim Allwein, and I'm Director of  
15 Legislative Services for the Pennsylvania School  
16 Boards Association.

17 As you might guess, this issue is very  
18 important to our members. And as you'll see in my  
19 testimony and some testimony that, I believe,  
20 follows mine, school districts have already done a  
21 lot to insure that their students do not have access  
22 to any objectionable material.

23 I want to talk a little bit about the  
24 Federal law that passed at the end of last year and  
25 how it to relates to House Bill 10 as far as school

1 districts are concerned, and follow up with some  
2 recommendations that I have for House Bill 10 that  
3 hopefully will make compliance with that bill a  
4 little bit easier for school districts.

5 Both the Federal law and House Bill 10  
6 require districts to adopt acceptable-use policies  
7 on Internet use, and both require the deployment of  
8 filtering or blocking devices to prevent access to  
9 certain objectionable material.

10 Probably the biggest difference here  
11 is that the Federal law applies only to school  
12 districts that receive certain Federal funding for  
13 technology under the Elementary and Secondary  
14 Education Act, which as you know is a Federal act.  
15 And also those that receive discounts on Internet  
16 access and internal connections through a Federal  
17 program that's known as Universal Service or, more  
18 commonly, the E-rate.

19 By our count, that would put  
20 approximately 390 of the State's 501 school  
21 districts or about 77 percent, and also 66  
22 vocational technical schools and intermediate units  
23 under the purview of the Federal act, because they  
24 do receive those E-rate discounts.

25 We are not sure, however, how many

1 school district, if any, are covered by the act  
2 solely because they receive funding under ESEA. But  
3 if you need that information, I'm sure the  
4 Department of Education has that for you. House  
5 Bill 10 by contrast would apply to all school  
6 districts.

7           The Federal law says that school  
8 districts that get funding under E-rate have to  
9 certify their compliance by the end of October of  
10 this year by doing one of three things.

11           They have to prove to the appropriate  
12 Federal agency that they are already complying with  
13 the requirements of CIPA, which is the Federal act.  
14 They have to show that they're undertaking actions  
15 toward compliance with CIPA by next July. They can  
16 do that simply by attaching minutes from a regular  
17 board meeting saying that they talked about the  
18 issue, attach an RFP, some kind of proof that they  
19 are looking at complying with the act by July 1st of  
20 next year. Or also, I guess, there are some  
21 districts that receive certain things through the  
22 E-rate that won't necessarily qualify them under the  
23 CIPA provisions.

24           So one of these three things must be  
25 done by each school district that applies for

1 discounts under the E-rate. Failure to comply by  
2 October 28th will render districts ineligible to  
3 receive further E-rate discounts. Districts that  
4 are affected because they receive Title 3 funding  
5 will be ineligible to receive any further funding.

6 In both cases, however, exceptions are  
7 allowed. The school district receives a waiver, and  
8 they can do that under the Federal law if they can  
9 show that State or local procurement rules or  
10 regulations or competitive bidding requirements  
11 prevent them from making a certification by that  
12 date.

13 But even where district receive  
14 waivers, they must certify by October that they will  
15 be in compliance with the Federal act by July 1 of  
16 2003.

17 House Bill 10, on the other hand,  
18 doesn't require any such certification of  
19 compliance. School districts must, however, submit  
20 their acceptable-use policies, the revisions of  
21 those policies to the Department of Education. And  
22 those policies must identify the software program  
23 being used and the on-line server being used to  
24 block access to prohibited materials.

25 House Bill 10 goes a bit further by

1 requiring Internet policies to establish appropriate  
2 measures to be taken against willful violators of  
3 policy and by requiring expedited review and  
4 resolution of a claim that a policy is denying a  
5 student or other person access to material that is  
6 not prohibited.

7 As I mentioned, we are not really  
8 concerned with the requirement for districts to  
9 write policy on Internet use. We haven't asked  
10 every single district, but my guess is that probably  
11 well in excess of 90 percent have such policies.  
12 However, we will question the total reliance on  
13 filters both in House Bill 10 and in the Federal  
14 act. And our skepticism isn't so much based on  
15 whether or not the software is completely effective,  
16 although as you heard and as you probably will hear,  
17 there will be people that challenge that.

18 We believe that simple monitoring and  
19 supervision of students while they are using a  
20 computer is a much more effective deterrent to  
21 Internet abuse. Almost all districts already  
22 provide monitoring and supervision. Students are  
23 rarely in a situation where they're using a computer  
24 without having a teacher or other adult in the room  
25 or nearby.

1           If you have ever been to a school  
2 library, you'll notice that most of the time the  
3 computers are located up front near the librarians'  
4 desks and not in the corners behind the bookshelves.  
5 The same is true in most classrooms as well, where  
6 folks would have a hard time hiding from the view of  
7 a teacher or supervisor anything that they might  
8 have on the computer.

9           Unfortunately, having said that for  
10 the majority of the State's school districts as I  
11 said through the Federal law, the use of Internet  
12 filters and blocking software is now the law. So we  
13 are not going to ask you to make compliance with the  
14 State law any less stringent, because we think that  
15 would be unfair to those districts who are already  
16 under the auspices of the Federal law.

17           But the effectiveness of the filter in  
18 use is an important question, because House Bill 10  
19 includes a provision that allows the Attorney  
20 General, or a District Attorney or an aggrieved  
21 parent to bring an action in a Court of Common Pleas  
22 seeking a court order directing a school board to  
23 enforce a policy filed with the department. We  
24 believe that this provision is written too broadly.

25           If a party is aggrieved because

1 students were exposed to prohibited material that  
2 filtering software did not block, will the board be  
3 required to enforce their policy by buying new  
4 software, and how many times could that happen?

5 We are not necessarily concerned with  
6 the cost of filtering software. We have been told  
7 by our own folks, who are more knowledgeable in these  
8 matters, that it's not that expensive. However, if  
9 school districts have to get caught up in continual  
10 replacement of that filtering software, we could see  
11 districts starting to suffer some large  
12 administrative costs. And, of course, in a larger  
13 district such as Philadelphia or Pittsburgh, those  
14 costs are going to be very, very large indeed.

15 We do like the provision in House Bill  
16 10 that allows a list of acceptable software that  
17 has been examined and approved, that list is  
18 provided, as well as assistance from the Attorney  
19 General's Office or the Department of Education,  
20 both in writing policy -- and, actually, the only  
21 assistance that is required right now for the  
22 department to provide is in writing policy. We'll  
23 talk about that in a minute.

24 I would be remiss if I didn't take  
25 some time to thank Representative Egolf for amending

1 the bill in the previous session and removing the  
2 two most onerous provisions to the School Boards  
3 Association. The first one that was removed was a  
4 requirement that all school district Internet  
5 policies be sent to the department for approval. We  
6 thought that would have set a dangerous precedent.  
7 I don't think there is any case right now where a  
8 school district has to send in a copy of their  
9 policy on any issue for approval from anyone in  
10 Harrisburg.

11 The second provision that was removed  
12 was the penalty of the loss of subsidy monies that  
13 Representative Josephs made mention of earlier. We  
14 felt that was way too severe a penalty for folks not  
15 complying with this law. For that reason, we don't  
16 oppose House Bill 10.

17 As I said, I would like to make some  
18 recommendations that I think can make it a little  
19 more workable for school districts. And they are  
20 very quickly:

21 Amend Section 7 of the bill so that a  
22 school district that is covered by the Federal act  
23 would be in compliance with House Bill 10 by simply  
24 submitting to the department a copy of the  
25 certification that it has to submit to the Federal

1 agency saying they are or will be in compliance with  
2 the Federal law.

3           Districts can list the type of  
4 software being utilized without compliance. We  
5 don't have a problem with that. Essentially that  
6 would prevent the school district from having to  
7 jump through two hoops for the Federal law and one  
8 for the State law.

9           Delete or amend Section 8F, which is  
10 the court enforcement language that I mentioned  
11 earlier. Again, we think it's written a little bit  
12 too broadly. It could cause increased cost and,  
13 frankly, public embarrassment to a district for an  
14 action that may not be its own fault. At the very  
15 least, the section should be tightened up so that  
16 court orders are allowed only in instances where a  
17 school board has not taken the proper action in a  
18 timely manner.

19           Expand the language in Section 6B that  
20 requires the Office of Attorney General and  
21 Secretary of Education to assist districts in the  
22 help of developing a policy. I'm not, frankly, so  
23 sure districts are going to need a lot of help there  
24 because they all have solicitors or else they call  
25 us and we help them out. We have a staff of folks

1 that helps people and helps school districts with  
2 policy.

3 But that section should be expanded to  
4 provide assistance to districts that request help in  
5 selecting a software program or an on-line server  
6 that perhaps some other districts have had good  
7 success with. And I know there's going to be the  
8 list of approved -- not approved, but software  
9 that's been reviewed. Again, that will be very  
10 helpful as well.

11 We urge you to retain the language,  
12 the current language, in Section 6A, which is the  
13 language on the review of software programs, but not  
14 to make a requirement that only those software  
15 packages that have been reviewed can be used. I  
16 think you don't want to limit school districts here.  
17 If they find something that is effective or more  
18 effective than something else, they should be  
19 allowed to use it.

20 In addition to my testimony, I have  
21 enclosed a few samples of school district Internet  
22 policies. You will see that two of the three that I  
23 have enclosed address the issue of filters. They  
24 all address the issue of security as well.

25 A short summary of both the Federal

1 law and the E-rate program that I've cited  
2 throughout.

3 I thank you for the opportunity, and  
4 I'll be happy to answer any questions.

5 CHAIRMAN MAITLAND: Thank for your  
6 testimony. Are there any questions? Representative  
7 Josephs.

8 REPRESENTATIVE JOSEPHS: Thank you for  
9 your testimony. Thank you, Mr. Chairman.

10 I was surprised to hear you say, Mr.  
11 Allwein, do you think that House Bill 10 requires  
12 the use of on-line filters that work from the  
13 servers?

14 MR. ALLWEIN: If you look at the  
15 language -- and I don't know if I have a copy of the  
16 bill -- it talks about using software or on-line  
17 servers to filter access.

18 REPRESENTATIVE JOSEPHS: Or. I don't  
19 know the place to look.

20 REPRESENTATIVE EGOLF: That's correct.

21 REPRESENTATIVE JOSEPHS: So an  
22 institution wouldn't be required to use an on-line  
23 server?

24 MR. ALLWEIN: That's correct.

25 REPRESENTATIVE JOSEPHS: I thought I

1 heard you say --

2 MR. ALLWEIN: The problem that we can  
3 run into though, and one of the reasons why, as I  
4 mentioned, you should retain the language, the  
5 current language, that does not force the district  
6 to use something that's been reviewed by the  
7 Attorney General is, to the extent a district is  
8 using a server, an off-site server, to provide  
9 Internet services, if you require districts to use  
10 something that's on a list and that server is not  
11 using it, which is not the fault of the school  
12 district, then the school district has to go and  
13 find another server, which I don't think is  
14 appropriate.

15 REPRESENTATIVE JOSEPHS: But the  
16 district could hypothetically use a filter that was  
17 based in each PC?

18 MR. ALLWEIN: Correct.

19 REPRESENTATIVE JOSEPHS: If its server  
20 was noncompliant?

21 MR. ALLWEIN: Right, it could do that.

22 REPRESENTATIVE JOSEPHS: Thank you.

23 MR. ALLWEIN: Sure.

24 CHAIRMAN MAITLAND: Representative  
25 Egolf.

1                    REPRESENTATIVE EGOLF: Thank you, Mr.  
2 Chairman. Thank you, Mr. Allwein, for your  
3 testimony. I agree, we've worked closely on this  
4 and I know that you're very concerned with the  
5 problem.

6                    I might just answer Representative  
7 Josephs' question earlier. One of the reasons that  
8 we agreed with your request to sort of keep the  
9 Secretary of Education out of enforcement of this,  
10 because we have an elected body, the school board  
11 which governs the schools, since they are elected  
12 and answerable to the public, we felt that that was  
13 sufficient, where as we don't have that elected body  
14 at that level of the library. So that's the big  
15 difference.

16                    And it's an entirely different  
17 situation, too. With school children, you don't  
18 have adults generally accessing those computers. So  
19 there were some reasons, and we agreed with that.  
20 Because we are not trying to make this an onerous  
21 regulation or law. We are trying to solve a  
22 problem. And we felt that that was one way of doing  
23 it. And, of course, if it does in the future, we'll  
24 look at it.

25                    I would like to ask you a question.

1 You said that PSBA is not concerned with the need  
2 for school districts to write policy on Internet  
3 use.

4 MR. ALLWEIN: Right.

5 REPRESENTATIVE EGOLF: But we do  
6 believe that total reliance on filters and other  
7 blocking devices is unwarranted. I don't know if  
8 you're aware, that's not the total reliance on that.  
9 That's just a minimum. In other words, using  
10 filters but you can use other things, supervision  
11 and so on that you mentioned. Are you aware of  
12 that?

13 MR. ALLWEIN: I know you can use that.  
14 I don't think those things are mentioned in the  
15 bill, though. Correct me if I'm wrong.

16 REPRESENTATIVE EGOLF: I believe you  
17 will find that the bill does say as a minimum or at  
18 a minimum or at least filters or servers. But you  
19 can do these other things. And certainly if that  
20 works, the more things that work the better.  
21 That's what the bill does. I just wanted to point  
22 that out to you.

23 MR. ALLWEIN: The other thing, and I'm  
24 glad I took a look at the testimony of the gentleman  
25 to follow, because he does cite some statistics in

1     there showing that many school districts, the large  
2     majority of them, already are using filtering which  
3     was something I didn't know until I checked into  
4     some of the policies that we had from other school  
5     districts.

6                     REPRESENTATIVE EGOLF:   In fact, I was  
7     going to ask you if you knew how many schools are  
8     using filtering.

9                     MR. ALLWEIN:   I won't steal his  
10    thunder.  He's got it in his testimony, so I'll let  
11    him tell you.

12                    REPRESENTATIVE EGOLF:   You said you  
13    believe that the provisions are written too broadly  
14    to allow parents to bring action.  Are you aware  
15    also that the bill does -- if the school follows the  
16    requirement of having approved filtering or servers  
17    that are approved by the Secretary of Education and  
18    the Attorney General that they cannot be held  
19    liable?

20                    MR. ALLWEIN:   I appreciate that, but I  
21    used the words public embarrassment.  You could have  
22    a parent whose son happened to see something and  
23    told his parents that maybe some other kids were  
24    able to get access to because the filter didn't  
25    block it.  And if you look at the bill, I think that

1 parent could actually go to the Court of Common  
2 Pleas and have the court write an order to the  
3 school district to, quote-unquote, enforce their  
4 policy. Which my guess is that would mean, No. 1,  
5 to punish the students. But it could mean also that  
6 they need a better piece of software to block access  
7 to that material.

8 REPRESENTATIVE EGOLF: Let me ask you.

9 MR. ALLWEIN: That's where I think we  
10 find a situation that could be troublesome.

11 REPRESENTATIVE EGOLF: Maybe with the  
12 fact that you don't have to rely strictly on  
13 filters, that you have supervision. What you said  
14 almost invariably occurs, they have supervision.  
15 You said it's very rare, I think, up here, students  
16 are rarely in a situation where they are using a  
17 computer without a teacher or some adult in the room  
18 with them.

19 So with that in mind, would it be much  
20 of a risk? If you have both, the supervision which  
21 you say is always there and the filters, wouldn't  
22 that be very rare to have that occur and --

23 MR. ALLWEIN: I think and I hope  
24 you're right, that it probably would be rare but --

25 REPRESENTATIVE EGOLF: Supervision,

1 the way it is now, if supervision prevents it, then  
2 this is just adding more prevention of that  
3 happening.

4 MR. ALLWEIN: I understand, but kids  
5 being kids, whenever you put something into place to  
6 prevent them from doing something, you know -- and  
7 we all had them in our class when we were in high  
8 school. You know somebody's going to try and beat  
9 it somehow. There's a lot of smart kids out there  
10 that can do amazing things with computers. And,  
11 again, it may not be a common occurrence, but it can  
12 happen.

13 REPRESENTATIVE EGOLF: Also, you  
14 mentioned about would the board be required to buy  
15 new software if what they had was not working. Are  
16 you already aware that the Secretary in conjunction  
17 with the -- and I think it was mentioned earlier --  
18 Attorney General have to give you a list, give the  
19 schools a list, of approved software. So if you are  
20 using that approved software, I don't think that  
21 would occur, would it? How do you see that  
22 happening?

23 MR. ALLWEIN: Well, again, looking at  
24 it from the school board perspective from the local  
25 level, if you have a parent at a school board

1 meeting and he's making an issue out of it, telling  
2 them that you are using something that's on a list  
3 from the State may not be an adequate answer,  
4 unfortunately.

5 REPRESENTATIVE EGOLF: I was  
6 interpreting that you thought--

7 MR. ALLWEIN: It would certainly cover  
8 the school district, there is no question about  
9 that. I'm just saying that --

10 REPRESENTATIVE EGOLF: You are not  
11 going to be forced to by a higher authority.

12 MR. ALLWEIN: I didn't mean forced by  
13 the State. I mean forced through the power of  
14 public opinion.

15 REPRESENTATIVE EGOLF: And then one  
16 last question. You mentioned that expanding the  
17 language of Section 6, that the Secretary of  
18 Education should assist the school districts that  
19 request help. Again, I think that's provided for in  
20 the bill.

21 MR. ALLWEIN: Well then, very good.

22 REPRESENTATIVE EGOLF: Thank you.

23 CHAIRMAN MAITLAND: Thank you very  
24 much for your testimony today, Mr. Allwein.

25 MR. ALLWEIN: Thank you.

1                   CHAIRMAN MAITLAND: I would like to  
2     invite David Burt, Market Research Manager of N2H2,  
3     Inc., and author of Dangerous Access. Mr. Burt.  
4     Thank you for being with us today.

5                   MR. BURT: Thank you for having me.  
6     As you recall, I testified here last year, as well  
7     last year I testified to the wonders of the Internet  
8     through a high-speed video connection, and it's nice  
9     to be in person.

10                  I've testified before here, I've  
11     testified at the COPA Commission before Congress and  
12     various other places. I am the Market Research  
13     Manager, and we make filtering software in the  
14     United States. I'm also a former public librarian.

15                  I'm here to talk about how filtering  
16     software works and how it's being used. I would  
17     like to address the problem of Internet problems in  
18     public libraries.

19                  As the problems have mounted with  
20     Internet pornography, there have been more of them,  
21     there are now thousands of documented incidents of  
22     patrons, many of them children, accessing  
23     pornography in public libraries, libraries have  
24     really struggled with how to deal with this.

25                  And one of the approaches that many of

1     them take as a policy, in fact, according to the  
2     American Library Association, almost 95 percent of  
3     public libraries in this country already have a  
4     policy. But the fact that we see these incidents  
5     increasing in frequency and in severity I might add,  
6     and at the same time as we've seen almost total  
7     adoption of policies, shows that these policies  
8     really aren't working very well.

9             I'll give you a few examples. One is  
10     the Minneapolis Public Library that Laura Morgan is  
11     going to talk about later on. But since they have  
12     had the Internet in 1996, they have had a policy at  
13     the Minneapolis Public Library. But the policy that  
14     the Minneapolis Public Library has didn't prevent  
15     them from an action being brought against them for  
16     violating the EUC rules.

17             Twelve librarians, one man and eleven  
18     women, accused the library of being a hostile,  
19     offensive, palpably unlawful, working environment,  
20     where images of sex, child pornography and child  
21     rape were routine, as were incidents of fondling by  
22     some library patrons at computers.

23             In their complaint, the librarians  
24     told of hard-core pornographic web sites left  
25     unattended and open for anyone to see and graphic

1 printouts left on tables.

2           The Broward County Library in Broward  
3 County, Florida also uses an Internet policy. They  
4 also use education, too, to encourage appropriate  
5 use of the Internet. The Broward Public Library  
6 also reported that there were 14 incidents of  
7 masturbation documented by library and police  
8 reports, two incidents of men exposing themselves,  
9 and one instance of a man fondling a female patron.

10           The Broward Library configures all  
11 public access computers in the children's area to  
12 default to the ALA's 700 plus Great Sites for kids.  
13 Unfortunately, creating a bookmark for children did  
14 not prevent this incident from occurring at the  
15 Broward Public Library: "Young man probably 13 or  
16 14 years old had accessed something having to do  
17 with sex with animals. He acted strangely, perhaps  
18 also masturbating."

19           The library's policy and the library's  
20 education in 700 Great Sites did nothing for that  
21 child.

22           The Los Angeles Public Library also  
23 has a policy. And in the Los Angeles Public  
24 Library, according to the Los Angeles Times, the  
25 machines are regularly steered to on-line photos of

1 naked women, digitized videos of sex acts and ribald  
2 chat-room discussions."

3 A far more First Amendment friendly  
4 and effective way to address this problem is through  
5 filtering software, as many libraries now, almost  
6 4,000 public libraries in this country, have  
7 discovered after trying the policy-based approach  
8 and seeing it fail.

9 The Greenville, South Carolina Public  
10 Library suffered problems similar to those in  
11 Minneapolis. An internal report found that, "a  
12 large number, perhaps 50 percent, of the users on  
13 one afternoon were young men going to pornography  
14 sites." Library staff found that female staff are  
15 intimidated by this activity. One female staff  
16 member said, I felt dirty coming home at the end of  
17 the day.

18 To stop the illegal activity and  
19 harassment and restore staff morale, the library  
20 board chose to install filtering software. Since  
21 they installed filtering software last year, abuse  
22 of the Internet has stopped. Further, no patrons  
23 have complained about being denied access to  
24 legitimate sites.

25 This experience has been repeated

1 across the country. The Orange County, Florida  
2 Public Library also had similar problems. Director  
3 Dorothy Field described them as, "A number of people  
4 were coming into the library and accessing sites  
5 that would be described as hard-core pornography. I  
6 am not talking about Playboy and naked ladies. They  
7 would view this stuff for hours on end."

8 After installing filtering software,  
9 the Orlando Sentinel reported that, "complaints from  
10 library patrons about others viewing porn have  
11 dropped since the screening system was implemented."

12 A good example of the process that  
13 many of these libraries have gone through with  
14 policies and then eventually ending up installing  
15 filters is the Camden, New Jersey Public Library.  
16 As was described in the Philadelphia Inquirer: "The  
17 library system bought workstations whose monitors  
18 were sunk below table level, making it difficult for  
19 others to see what was on the screens. Problem  
20 solved? Not quite.

21 That took care of the problem for an  
22 extended period of time, Director Claudia Sumler  
23 said. As we kept adding computers and a training  
24 center, the pornography issue started to come up  
25 again. Student assistants helping with the new

1 computers were being exposed to pornography."

2 The library eventually ended up  
3 installing filtering software. Four thousand public  
4 libraries have installed this software.

5 In addition to these examples that  
6 we've seen and the popular filtering software, I  
7 would also add that there is no empirical evidence  
8 to suggest that posting lists of 700 great sites,  
9 offering Internet safety classes or having policies  
10 has any meaningful effect on patron behavior or  
11 preventing children from accessing pornography.

12 As I pointed out, filtering software  
13 has been adopted by nearly 4,000 public libraries.  
14 According to research from the U.S. National  
15 Commission on Library and Information Science, that  
16 number has increased from just 1600 in 1998 to 3711  
17 in the year 2000, or 24.6. So nearly one out of  
18 every four public libraries are now using filtering  
19 software.

20 Not only is this software now being --  
21 and in public schools, as the gentleman before me  
22 pointed out, it is much more widespread. A May 2001  
23 study from the National Center for Education  
24 Statistics finds that 74 percent of public schools  
25 are now using filtering software. That's three out

1 of four public schools. Even before the Federal  
2 legislation, three out of four public schools had  
3 adopted this software voluntarily.

4 And the reason for that is very clear.  
5 You see these public schools try a policy-based  
6 approach. They try to have one teacher in a  
7 classroom monitoring 30 teenage boys and trying to  
8 make sure they're all not looking at things they're  
9 not supposed to be, and it just simply doesn't work.

10 You need a comprehensive-based  
11 approach. Just simply relying on education and a  
12 policy is like relying on driver's ed without  
13 requiring seat belts. You need a more  
14 comprehensive-based approach for it to be effective.

15 Studies that have been done of how  
16 librarians use filtering software and how much they  
17 like it show that filtering software is widely  
18 popular among libraries that use filtering software.

19 In April and May 2000, library  
20 researcher Dr. Ken Haycock conducted a study of  
21 school librarians and public librarians on the use  
22 of filtering software, for the magazine School  
23 Library Journal. An impressive 90 percent of public  
24 librarians who use filters responded that "the  
25 software serves its purpose either very well or

1 somewhat well.

2 And when asked if they were overall  
3 satisfaction with a decision to install filtering  
4 software, 76 percent of public librarians said they  
5 were either very satisfied or somewhat satisfied.

6 This is backed up by the experience  
7 these librarians themselves have. Most of these  
8 librarians when you ask them, such as David Ruff,  
9 Executive Director of the Rolling Meadows, Illinois  
10 Public Library said that, "In the week since the  
11 filtering policy was expanded, patrons have not  
12 noticed the difference" since they put filters on  
13 all terminals.

14 Joan Adams, Director of the Jefferson  
15 Parish, Louisiana Public Library said that added  
16 restrictions were hardly detectable by library  
17 patrons.

18 Finally, Judith Drescher, Director of  
19 the Memphis-Shelby County Tennessee Public Library  
20 said that since installation, the library has  
21 received no reports from the public to review and  
22 block a site. Library staff has submitted five  
23 sites for review, all of which were blocked."

24 The types of filtering software in use  
25 today are, in fact, quite well suited for use in

1 public libraries, as more and more libraries have  
2 selected filtering software and more and more  
3 schools. Filtering companies have fine-tuned their  
4 products to be the types of features that public  
5 libraries want. The majority of filtering software  
6 packages widely used in public schools and public  
7 libraries have features such as they can be  
8 overridden at the work station level. When a patron  
9 encounters a site that's wrongly blocked, they can  
10 usually ask the librarian to override it, and the  
11 librarian can enter a password.

12 We find that doesn't happen an awful  
13 lot and that librarians don't spend a lot of time  
14 overriding wrongly blocked sites. There's no  
15 specific research that's been done on that  
16 particular topic, but the evidence from listening to  
17 librarians, from talking to them, what they say  
18 about using filtering software doesn't suggest that  
19 this is a serious problem.

20 Most of these packages allow you to  
21 set different levels. You can have more restricting  
22 filtering for minors. You can set them on different  
23 work stations. You can have one group of work  
24 stations that has only blocking the really hard-core  
25 stuff and then another group of work stations that's

1 blocking more things than that. And have those in  
2 use by minors and some in use by adults.

3 Most of them have some kind of a  
4 feedback mechanism, where you can send an e-mail  
5 message to the filtering company or to the library  
6 itself suggesting that a site be block or a site be  
7 unblocked.

8 Most of them break their categories  
9 down, the ones that relate to sexually explicit  
10 material, by multiple levels. We'll have categories  
11 like hard-core or we'll have nudity or lingerie or  
12 sex ed. So that if somebody wants to block only the  
13 really nasty stuff, they can do that without  
14 blocking the lingerie sites and without blocking the  
15 sex ed sites and that sort of thing.

16 One last thing I'll address is the  
17 cost. The one gentleman brought that up. The best  
18 data we have on that is a market research report  
19 that was conducted by Frost and Sullivan. I would  
20 submit that for the record, except that it cost  
21 \$4,000, as most, you know, market research reports  
22 do cost a lot of money so I will quote from it.

23 It's called Content Filtering Markets.  
24 It was in the year 2000. And it found in 1999, the  
25 average annual per user licensing and subscription

1 fee for educational products was \$13. So that a  
2 library with like, say, 100 work stations would pay  
3 \$1300. And that's about right. That's about \$13 a  
4 share from the pricing that we get and the pricing  
5 that we see from our competitors, we think that's  
6 probably a pretty accurate estimate.

7 Thank you.

8 CHAIRMAN MAITLAND: Thank you very  
9 much for your testimony, Mr. Burt.

10 Are there any questions?

11 Representative Josephs.

12 REPRESENTATIVE JOSEPHS: Thank you,  
13 Mr. Chairman. Thank you for testifying. I've been  
14 on your side, of course, as soon as I saw that you  
15 were going to testify.

16 You have a privacy policy, is that not  
17 true?

18 MR. BURT: N2H2 has a privacy policy?

19 REPRESENTATIVE JOSEPHS: Yes.

20 MR. BURT: Yes.

21 REPRESENTATIVE JOSEPHS: Can you  
22 explain to us why you need a privacy policy and what  
23 it is?

24 MR. BURT: Well, we have a policy  
25 about information that's collected from people that

1       come and visit our web site.  If -- like most  
2       companies, most every company that's in business has  
3       a policy about when people visit their web site, if  
4       you are there shopping for a product, what kind of  
5       information that they collect and how they use that  
6       and that sort of thing.

7                    REPRESENTATIVE JOSEPHS:  Do you also  
8       have a disclaimer on your web site?  I thought I  
9       found one once, but it might be another company.

10                   MR. BURT:  I don't know what kind of a  
11       disclaimer we have on there.

12                   REPRESENTATIVE JOSEPHS:  Would you be  
13       so kind to forward that, please?

14                   MR. BURT:  Sure, I would be happy to  
15       do that.

16                   REPRESENTATIVE JOSEPHS:  Your company  
17       doesn't -- if you buy the software, will it block  
18       bulletin boards, e-mail, chat rooms, news groups,  
19       those kinds of Internet activities?

20                   MR. BURT:  I don't have the category  
21       list in front of me, but I know that we do have a  
22       mail group and we do have a category for a free  
23       e-mail that will block the e-mail sites.  We do have  
24       a category for chat group sites that will block chat  
25       rooms and those sorts of things.

1           REPRESENTATIVE JOSEPHS: Does that add  
2 to the basic cost of the software?

3           MR. BURT: No.

4           REPRESENTATIVE JOSEPHS: No?

5           MR. BURT: Not at all.

6           REPRESENTATIVE JOSEPHS: If you have  
7 something or you can direct me to a site that would  
8 explain that or direct the Committee to a site.

9           MR. BURT: I would be happy to. There  
10 is a list. It's about ten pages long. It explains  
11 all our categories and what they mean. It's on our  
12 web site.

13           REPRESENTATIVE JOSEPHS: I think I  
14 have that list, but it doesn't -- I have some  
15 questions about it, but I'm not going to ask them  
16 since we are behind. Because some of the sites that  
17 do block, for instance, militants, I wonder whether  
18 we would end up having people blocked from getting  
19 to groups like the National Rifle Association or  
20 those kinds of things.

21           How many web sites do you figure, how  
22 many URLs do you think are out there?

23           MR. BURT: In the universe?

24           REPRESENTATIVE JOSEPHS: Yes.

25           MR. BURT: I've seen various

1 estimates. When we talk about URLs and sites, it's  
2 important not to confuse the two, because I  
3 frequently hear people do that.

4 REPRESENTATIVE JOSEPHS: That's true.  
5 I'm sorry.

6 MR. BURT: A web site is a unique site  
7 like CNN.com that may have hundreds or thousands or  
8 in a few cases even millions of URLs attached to it.  
9 A URL is a specific page.

10 I've seen -- the estimate -- there are  
11 much better estimates for the number of URLs. I've  
12 seen in between one and two billion total are the  
13 studies I've seen. In terms of the number of sites,  
14 I've seen them anywhere from seven to thirty  
15 million, depending on how you define a site which is  
16 an issue and how you're counting.

17 But the number of URLs, number of  
18 unique pages on the Web is between one and two  
19 billion I've seen.

20 REPRESENTATIVE JOSEPHS: And your  
21 company purports to screen these one or two billion  
22 URLs?

23 MR. BURT: We don't need to screen  
24 every single one of them. We do about 4.7 million  
25 is what we do. And the reason we're able to do that

1 is because almost all of the category that we are  
2 trying to block is category that want or are web  
3 sites that want to be found. Porn sites don't try  
4 and hide from you. They jump up and down and  
5 scream, please find me. There have things that they  
6 put in, they're called metatags. They have ways of  
7 loading up their pages so that they're identified by  
8 the search engines. They really want to be found.

9 REPRESENTATIVE JOSEPHS: I've never  
10 found one, but go ahead.

11 MR. BURT: They're pretty easy to  
12 find. Go to Yahoo or Alta Vista and type in sex.

13 REPRESENTATIVE JOSEPHS: I'm always on  
14 the computer, always.

15 MR. BURT: You can find them very  
16 easily. In fact, the National Center for Missing  
17 and Exploited Children did a study a year or so ago  
18 where they found, I think it was, about one in four  
19 regular Internet users had been exposed to --

20 REPRESENTATIVE JOSEPHS: I'll go back.  
21 Maybe I'll have better luck.

22 MR. BURT: -- access to pornography.  
23 We don't need to screen all through two billion web  
24 sites, because that category is making itself --  
25 that content is making itself very available to us

1 so we can go out and get it.

2 REPRESENTATIVE JOSEPHS: Do you screen  
3 for foreign language sites?

4 MR. BURT: Yes, we do.

5 REPRESENTATIVE JOSEPHS: How many?  
6 What kind of languages?

7 MR. BURT: I don't have a list with  
8 me, but I know that we do have reviewers that are  
9 fluent in Portuguese, Spanish, Japanese, Chinese,  
10 and several other languages.

11 REPRESENTATIVE JOSEPHS: How many  
12 foreign language URLs do you think there are? I  
13 mean, this is a guess, I know.

14 MR. BURT: The last time I read, I  
15 read something a few months ago that said that the  
16 amount of content on the Internet that was not in  
17 English was approaching 50 percent, somewhere in  
18 that neighborhood. So it's getting close to half  
19 the content on the Internet is foreign language.

20 REPRESENTATIVE JOSEPHS: A lot of  
21 Chinese, I understand.

22 MR. BURT: Yes, Chinese is getting  
23 very big, that's correct.

24 REPRESENTATIVE JOSEPHS: One more.  
25 What was it? Images, do you screen for images?

1 That don't have words attached? If you have a page  
2 that's a URL all by itself?

3 MR. BURT: With nothing but an image  
4 on it?

5 REPRESENTATIVE JOSEPHS: Yes.

6 MR. BURT: Well, again, I mean, if you  
7 want to defeat a filter by just putting up an image  
8 with no text around it so that no filter and nobody  
9 can find it, you can do that. And probably if  
10 nobody knows about it, no filter is going to find  
11 it, but nobody else is going to find it either. So  
12 it's kind of what's the point, you know.

13 Because we are trying to find content  
14 that wants to be found. I mean, that's really the  
15 issue. I mean, if you could put up a site and hide  
16 it so that nobody can find it, but what kid is going  
17 to see that if we're not going to find it.

18 REPRESENTATIVE JOSEPHS: I just got a  
19 magazine from the University of Pennsylvania. They  
20 talk about the fact that they had they thought  
21 on-line, the largest historical photographic  
22 collection on the globe, historical artistic value.  
23 Those photographs don't have any text except the  
24 size of the photograph and sometimes what -- a short  
25 description, this is a native American woman, this

1 is whatever.

2 I'm assuming that those would not be  
3 blocked.

4 MR. BURT: I would assume not. That  
5 is not the type of thing that we would block, no.

6 REPRESENTATIVE JOSEPHS: Regardless of  
7 what the subject matter might be of any of those  
8 photographs?

9 MR. BURT: It would depend. Something  
10 like that in a historical archive, it is pretty  
11 unlikely that we would block it. We do have like an  
12 exception category that we call historical, which is  
13 something, for example, we have blocked sites for --  
14 under violence that were pictures of war atrocities  
15 and things like that. But we have an exception  
16 called history, and those would fall under that, so  
17 they wouldn't be blocked if you didn't want to block  
18 things that were of historical value.

19 REPRESENTATIVE JOSEPHS: And you are  
20 employed by this company and your livelihood depends  
21 upon selling these products?

22 MR. BURT: That's correct.

23 REPRESENTATIVE JOSEPHS: Thank you.

24 Thank you, Mr. Chairman.

25 CHAIRMAN MAITLAND: Representative

1 Egolf.

2 REPRESENTATIVE EGOLF: Thank you, Mr.  
3 Chairman. Thank you very much for your testimony.  
4 I have just a couple questions here. I may have  
5 missed it. I'm not sure. You said that about one  
6 in four public libraries now use filters, and then  
7 you cited the number that were very satisfied and  
8 somewhat satisfied. I'm just curious, in that  
9 somewhat satisfied, would they be on the side that  
10 preferred the filters or not, since they were not  
11 completely satisfied? Was there anything to  
12 indicate that any of those would like to go back to  
13 non-filtering?

14 MR. BURT: Not that I can see, no.

15 REPRESENTATIVE EGOLF: So the  
16 percentage of those two, greatly satisfied and  
17 somewhat satisfied, seem to be, I guess, happy that  
18 they have had filtering now. They weren't saying  
19 it's bad.

20 Some of the things we hear that  
21 filtering is not good enough, it's bad filtering and  
22 so on. I'm taking that that they are on the side of  
23 saying it's good enough and we're glad we have it?

24 MR. BURT: That's how I would  
25 interpret that. And I would say that's very

1       impressive too, considering the level of skepticism  
2       that you see among public librarians about filters  
3       that you would get satisfaction levels that high  
4       really says a lot about how effective the product  
5       is.

6                        REPRESENTATIVE EGOLF:  Do you have a  
7       percentage of the number of sites that have been  
8       wrongly blocked, because that seems to be also a  
9       criticism.

10                      MR. BURT:  From what I've seen from  
11       where people have actually gone in and examined log  
12       files, which that's really the only way to tell how  
13       well a filter is working is to look at how it  
14       actually blocks real traffic from a library, school  
15       or in your home, rather than just presenting a list  
16       of a dozen or so wrongly-blocked sites.  That really  
17       doesn't tell you very much about what effect a  
18       filter is going to have if you install it in a  
19       public library.

20                      But where people have done that and  
21       actually gone in and looked at log files.  I think  
22       the best one was done by a group of people who were  
23       opposed to filters in the Utah public schools.  It  
24       was less than one tenth of one percent of all the  
25       Internet traffic was being wrongly blocked.

1                   And that really supports what public  
2                   librarians are saying when you ask them that are  
3                   using filters, are you having any problems with the  
4                   filters. And they're saying no, we're not having  
5                   problems or we're having very few problems, it's  
6                   very rare. Librarians just simply don't report this  
7                   as a problem.

8                   REPRESENTATIVE EGOLF: Thank you. And  
9                   then also some libraries are saying, librarians and  
10                  so on are saying, that this is suggesting that maybe  
11                  the only filter computers that children use maybe  
12                  have a separate room for adults. Does your research  
13                  show any of the adverse secondary effects of doing  
14                  that, such as we know there's research showing that  
15                  sex crimes increase around areas of bookstores, for  
16                  example. Do you have any data that shows that sort  
17                  of thing happening?

18                  MR. BURT: I don't have any data on  
19                  that, but there are plenty of examples though. And  
20                  Laura Morgan will certainly address this, that the  
21                  Minneapolis women when they talk about their  
22                  experience describe how when they installed the  
23                  Internet with unfiltered access that it brought a  
24                  new type of patron in, people that had never come  
25                  into the library before.

1           And other libraries report this, that  
2 the person that these librarians describe as porn  
3 addict, people who come in and spend hours at a  
4 time. As Miss Field was talking about in the Orange  
5 County, Florida Public Library, hours on end, a new  
6 type of user that will spend hours doing this. And  
7 these people tend to be sex offenders, some of them.  
8 And, frankly, having them spend hours and hours  
9 looking at porn in an environment where children are  
10 is something that I would consider not a very safe  
11 environment for children, no.

12           REPRESENTATIVE EGOLF: One last  
13 question. Maybe this would help Representative  
14 Josephs' concern there. Can you give us some  
15 examples? I've read some examples of Internet sites  
16 that attract children because of their words, like  
17 Bombie.com or that sort of thing. Can you give us  
18 some examples of some of those? And -- well, go  
19 ahead.

20           MR. BURT: Yes, there's actually a  
21 study that was done about that about six or eight  
22 months ago by a company called Cybervalence in  
23 Europe, and I could certainly give you a copy of  
24 that. What they found was there were several  
25 thousands examples -- I forget how many thousands.

1 I hate to throw out numbers without knowing the  
2 exact figure -- of examples of where pornographic  
3 web sites had used popular brand names and many of  
4 them toys, such as Nintendo and Disney and Bambi and  
5 things like that.

6 They use what they think is going to  
7 draw traffic to their web sites, too. And if that's  
8 something that's going to attract children then, so  
9 what. They don't care as long it's drawing traffic  
10 to their web sites.

11 REPRESENTATIVE EGOLF: Then I know I  
12 was told about some sites where you get into it and  
13 you can't exit it without turning the computer off  
14 completely. You can't go back and you can't hit  
15 that icon to exit or whatever. Is that very  
16 prevalent?

17 MR. BURT: It is real prevalent. I  
18 don't have any statistics on how many porn sites  
19 actually do that, but I know that it's a very common  
20 problem. And it's very common to read in the  
21 newspaper or talk to people who say I got to this  
22 porn site and then 15 more porn sites opened up.

23 And I know that at work we have that  
24 problem a lot with our reviewers when they review  
25 porn sites. I've seen 20, 30 windows open up at the

1 same time. You keep clicking and clicking and you  
2 can't shut them all down. That is a serious  
3 problem.

4 REPRESENTATIVE EGOLF: I had some  
5 complaints from parents about that happening when  
6 the child was at school, for example. One was in  
7 school and one was at the library, where the child  
8 got into it and couldn't get out and was scared and  
9 didn't know what to do and was afraid they'd get in  
10 trouble. They tried everything and just went deeper  
11 and deeper into porn.

12 Thank you very much, appreciate it.

13 CHAIRMAN MAITLAND: Mr. Burt, how long  
14 have you been in this business?

15 MR. BURT: I've been in this business  
16 for a year now. Before that, I was an activist that  
17 promoted filters and was also a public librarian.

18 CHAIRMAN MAITLAND: Has the price of  
19 the product decreased, increased or changed  
20 appreciably in the last couple of years?

21 MR. BURT: I would say if anything  
22 it's decreased. I don't have exact figures for you,  
23 but there's been more competition lately. More  
24 companies are entering into the space, particularly  
25 as they see big opportunities in corporation in the

1 enterprise sector, and there's a lot of pressure  
2 there with more companies.

3 CHAIRMAN MAITLAND: How frequently  
4 does the product change? I assume you're updating  
5 it all the time.

6 MR. BURT: Every day.

7 CHAIRMAN MAITLAND: Every day?

8 MR. BURT: Yes.

9 CHAIRMAN MAITLAND: Is it becoming  
10 more and more effective over time?

11 MR. BURT: We think so. We are adding  
12 new categories. We are finding new ways of  
13 identifying content. The COPA Commission last year,  
14 our CTO, chief technical officer, Kevin Fink,  
15 testified about that. And he has a paper that's on  
16 the COPA Commission web site describing all the  
17 techniques that we've used to identify content. And  
18 it's really quite a complex task. And we are  
19 continually refining those techniques to do that and  
20 adding more things.

21 CHAIRMAN MAITLAND: And the opposition  
22 so to speak, these sites that you attempt to block,  
23 are they actively trying to thwart your product?

24 MR. BURT: No, we don't find that at  
25 all, because again, as I said, these are sites that

1 want to be found. They could try and thwart our  
2 product, but that would be shooting themselves in  
3 the foot. Because in order to hide from the  
4 filters, they'd have to hide from the users who are  
5 trying to find them. And they want to be found by  
6 the users. So, no, they can't really do that  
7 without shooting themselves in the foot.

8 CHAIRMAN MAITLAND: Thank you. Thank  
9 you very much for your testimony. Representative  
10 Josephs.

11 REPRESENTATIVE JOSEPHS: There are  
12 some remarks that were made that I really think I  
13 cannot let go by. I am astonished to learn that  
14 people actually construct a site which would annoy  
15 the user so much that the user would never go back  
16 to that site. I find it -- in other words, the user  
17 would have to reboot.

18 And I would suggest based on the  
19 experience that we have had here the last couple of  
20 days with our Internet use where we all had to  
21 reboot, that there may be some other reason for  
22 folks getting on sites and finding their computer is  
23 frozen.

24 I do not believe that any person in  
25 his or her right mind would abuse a potential

1 customer. And getting to customers, I also don't  
2 believe that anybody without a credit card number  
3 would be able to view and view and view and view for  
4 hours.

5 If so, there is somebody with  
6 anti-business sense, and I hope you never hire that  
7 person, because whatever has gone in to putting  
8 together that site is getting viewed for free. And  
9 that's not the point of those sites.

10 And I think I had another question  
11 along those lines, but go ahead, with the Chairman's  
12 indulgence.

13 MR. BURT: Thank you. The answer to  
14 those questions oddly from a traditional business  
15 sense, those don't make sense as practices don't.  
16 But the economics of the Internet are strange in  
17 some ways, and those practices reflect that.

18 Porn sites get paid for how many times  
19 somebody clicks on their site. There is an article  
20 in the industry standard that was published about a  
21 year ago called how the porn sites do it, and I can  
22 send you that if somebody will remind me.

23 And the whole economics of porn  
24 revolve around thousands of free sites that point  
25 people to a small number of pay sites. That's why

1       there are all those free sites, because their  
2       mission is to try and point people to the paying  
3       sites where you have to do a credit card.

4               The sites that offer it for free get  
5       paid. They get paid like a penny or a fraction of a  
6       penny for every person they direct to those pay  
7       sites. That's why they open up like 30 windows,  
8       because they're getting like a penny for every one  
9       of those 30 windows that are directing people to the  
10      porn sites. Those windows that are opening up, all  
11      those 20, 30 windows, are windows to paid porn  
12      sites, and they're paying the person that open that  
13      window a penny to do that.

14              So that's kind of why that all works  
15      like that. It has to do with really the strange  
16      economics of Internet porn sites.

17              REPRESENTATIVE JOSEPHS: Thank you.  
18      Thank you, Mr. Chairman.

19              CHAIRMAN MAITLAND: Thank you very  
20      much, Mr. Burt.

21              MR. BURT: You're welcome.

22              CHAIRMAN MAITLAND: We appreciate your  
23      testimony.

24              Next I'd like to invite Christian  
25      Ophus, President of the Internet Safety Commission

1 and FamilyConnect, Inc.

2 MR. OPHUS: Good morning. There is  
3 some information I would love to cover. My name is  
4 Christian Ophus. I am cofounder and President of  
5 FamilyConnect and S4F Technologies. Both of those  
6 are Internet filtering companies. That is my  
7 primary purpose of business.

8 But in addition to that, I also serve  
9 as the President of the Internet Safety Association,  
10 which was formed last year and headquartered in  
11 Washington, D.C. for the specific purpose to be able  
12 to deal with some of the issues we're talking about  
13 today on the legislative front, from the standpoint  
14 of public relations and people wanting to get the  
15 truth of information about this subject.

16 I appreciate Miss Josephs' comments at  
17 the very, very beginning concerning her desire to  
18 try to have somebody who may be on a neutral ground  
19 as far as filtering is concerned. I think the  
20 problem is, unfortunately, I don't know that that's  
21 going to exist.

22 And this may be a bad example, but if  
23 you're talking about the subject of abortion, it's  
24 very difficult to find somebody who is neutral on  
25 that subject because it involves socio or Christian

1 ethic or whatever you might want to call this. This  
2 is an issue that skims on morality. And because of  
3 that, it makes it very complex.

4 But what I would like to say to Ms.  
5 Josephs is our company, S4F and FamilyConnect both,  
6 target different markets than libraries and  
7 education. Less than one percent of the revenue of  
8 our company right now is through libraries and  
9 education. I would like to do more of that, but as  
10 it stands right now, I would like to try to be for  
11 you a person who could give you as much information  
12 as possible about filtering, how it works, and  
13 dispel some of the myths, because there are a lot of  
14 myths out there.

15 And I will tell you, let me start off  
16 by saying filtering is not fool proof. It is not  
17 one hundred percent effective. It's reasonable  
18 effective. In fact, in my opinion as time moves on,  
19 even in the last, I don't know, 12 months, 24  
20 months, the advancements that have been made in the  
21 filtering technology industry are staggering.

22 So I'm not going to go super into  
23 depth onto this, except for to skim over a few  
24 points that have been talked about today. And I  
25 invite you all to read some of the comments that

1 I've made in here.

2 To start off, let me say this. The  
3 Internet, because it's the convergence of all of  
4 these new mediums; television, radio, print, postal  
5 service, telephone service, all of these things are  
6 coming together on the Internet. And there's a  
7 convergence of them. Even the U.S. Government is  
8 spending 3 billion dollars this year in E-rate funds  
9 to be able to put computers.

10 The educational library industry is  
11 very much wholeheartedly putting their arms around  
12 the Internet as a source for education to be able to  
13 use it. At the same time they're doing it and  
14 spending this huge amount of money and being able to  
15 put these kids on these terminals, not really a  
16 whole lot up until this last year has been done with  
17 regards to, hey, can we make sure we protect these  
18 kids. So I think that's a big issue.

19 I would like to say this, that I  
20 believe that one of the sacred cornerstones of the  
21 founding fathers was to preserve the free  
22 transmission of ideas. I am very, very much for  
23 free speech. But aside from free speech, there is  
24 obscenity harmful to minors and illegal activity  
25 that has to be addressed. Those things are not

1 covered under the free speech amendments. So I  
2 think it's very important as we look at that.

3 Another question I have is, is what  
4 makes the Internet immune to existing laws and  
5 statutes that are already in place. If we already  
6 have existing laws and statutes about harmful to  
7 minors, even as it pertains to books and things that  
8 are in libraries, why would the Internet be any  
9 different?

10 The Internet is a very viable tool for  
11 business and education, but there's definitely been  
12 conflict and controversy concerning the  
13 effectiveness of filters. So I want to take just a  
14 minute and talk about a few of those.

15 The very early on filtering type  
16 products that were out there very much were more  
17 rudimentary in that they had to search for things  
18 like keywords like triple X or Middlesex, England.  
19 We heard that talked about a lot, where they were  
20 searching for the word breast or the word sex.

21 The unfortunate thing in my opinion is  
22 is that those arguments are still being used today  
23 as reasons why filtering is ineffective, and that is  
24 just simply not true.

25 For example, our company S4F

1 Technologies two and a half years ago, we created a  
2 system called Intelligent Keyword Search String  
3 Blockout. And what that basically meant is, is  
4 through the keyword component of our filter, which  
5 we have several components, through the keyword  
6 component a person could go to a search engine and  
7 they could type chicken breast and they would be  
8 able to go to those sites. But if they typed just  
9 the word sex alone, it wouldn't be able to. So  
10 there's a series of what we call the naughty-word  
11 database. It's a huge database.

12 And David made reference to even words  
13 that are in other languages, where we have hundreds  
14 of hundreds and hundreds of keywords, perhaps  
15 thousands, where we can search and be able to find  
16 some of these web sites.

17 So the issue of the keywords is really  
18 not an issue anymore. I don't know of any filtering  
19 system that relies, one, solely on keywords. And,  
20 two, if they do rely solely on keywords hasn't found  
21 some way to solve this type of a problem, because it  
22 wouldn't be an effective product. And because it  
23 wouldn't be an effective product, it wouldn't be  
24 purchased.

25 One of the things that the first two

1 people up here talked about was Consumer Reports,  
2 that a library had used Consumer Reports as one of  
3 the bases, foundations, of what they had determined  
4 that filtering was ineffective.

5 I was very excited to see the Consumer  
6 Reports had put out a story on this before I read  
7 it, because I've always held that Consumer Reports  
8 had a great standard. And what I started reading  
9 the Consumer Reports article, I was very concerned,  
10 because immediately I started to find out that there  
11 was not going to be what I would consider accurate  
12 statistical data done.

13 In response to the article, I wrote a  
14 letter to the editor, David Heim of Consumer  
15 Reports, and I would like to outline real quick what  
16 I felt were the concerns of the Consumer Reports.  
17 Once again, the reason why is because not only here  
18 have I heard it mentioned, but also three weeks ago  
19 when I testified before the Subcommittee for the  
20 United States Congress, it was mentioned also by a  
21 gentleman from the ACLU. So I know that the  
22 Consumer Reports article is being held right now as  
23 proof positive that filters are ineffective, and I  
24 need to be able to dispel that myth.

25 First of all, I told David Heim in the

1 letter that the objectionable site content sample  
2 they used was only 86. It's a very, very small  
3 sample.

4 Second, a thoughtful set of criteria  
5 should be established to the selection of the sites.  
6 That was not apparent. They only tested six of the  
7 141 filter related products that you can find on a  
8 typical filter site, called getnetwise.org, which I  
9 recommend you looking at. It's a great site to find  
10 out about the different types of products.

11 Fourth, none of the filters that they  
12 tested were typically used in the educational space,  
13 and that's fine. But the problem with it was was  
14 that just as an incident of the article after the  
15 Consumer Reports had done this on the  
16 ineffectiveness of filters, they wrote a story on  
17 well, see, this is why the government should not be  
18 involved in filtering and what happens in schools  
19 and libraries.

20 Well, none of the products they used  
21 were typically used in the educational states. They  
22 were all client side or commercial type products  
23 used in your home.

24 And, lastly, the test that was  
25 conducted did not even include, in my opinion, one

1 of the most important aspects of filtering, and that  
2 is the ability for the filtering to be overridden or  
3 bypassed by web savvy children. And if I have  
4 enough time, we can address that also.

5 I was very glad to get a response back  
6 from David Heim. And, in fact, I have a copy of it  
7 here. I did not include it my testimony. I  
8 apologize. I'll be happy to let you guys have that.

9 But in the second to the last  
10 paragraph he responded and this is what he said, and  
11 I quote: We are guilty of testing only so-called  
12 client side software. One of my claims was is that  
13 he had only tested client side software. Since our  
14 founding in 1936, we've focused on testing products  
15 available to consumers at the retail level. It is  
16 not part of our brief to test software sold  
17 exclusively in schools or libraries.

18 By analogy, we would test garden  
19 hoses, sponges and auto polish, but not special car  
20 wash equipment. So, in essence, he was saying we  
21 don't and we never will be testing any products that  
22 would be used in libraries.

23 So the summary of my point here is to  
24 use the Consumer Reports article as a basis that  
25 schools or libraries, filtering is ineffective is

1 completely bogus entirely. So I submit that to you.

2 Also Christopher Hunter, a COPA  
3 panelist, was quoted by saying, "The majority of the  
4 reports about Internet content filters being both  
5 underinclusive and overinclusive have come from  
6 journalists and anti-censorship groups who have used  
7 largely unscientific methods to arrive at the  
8 conclusion that filters are deeply flawed."

9 And that's part of the reason why I  
10 made the comment a moment ago to Miss Josephs is  
11 that right now I wish there were an organization  
12 that could do a completely unbiased report to it,  
13 but it hasn't happened yet.

14 I don't want to waste a whole lot of  
15 time going into the specifics of how filtering  
16 works, with the exception of just mentioning that I  
17 talk about some of the content that can be blocked.  
18 I'd like to make a comment about one of the things  
19 that David Burt had said. I do have a list in front  
20 of me here from N2H2 of some of the categories that  
21 they offer for filtering.

22 But what I would like to add is, is  
23 that when a school uses N2H2's product that has  
24 these categories, by no means does the school have  
25 to or even in most cases do they ever block all of

1 these categories. But what N2H2 has done and  
2 companies like S4F is we offer multiple categories,  
3 so that we can take the control of what is or isn't  
4 blocked down to the local level.

5 The local librarians would resent the  
6 U.S. Government or even the State Government for  
7 that matter saying this is what your community  
8 standard should be. So every filtering company I  
9 know is building programs and software that  
10 specifically allow the local control of the library.

11 Now, of course, there's going to be  
12 categories of harmful to minors, obscenity, child  
13 pornography, those types of issues. In the setting  
14 of a library, I wouldn't imagine that most of these  
15 categories, if any, outside of the illegal ones  
16 we're talking about would ever be blocked.

17 But the reason why these exist is  
18 because in the corporate marketplace where corporate  
19 dollars are being used, corporations are saying,  
20 hey, we don't want our people looking at job sites  
21 or stocks or some of these other things. So that is  
22 the reason why those categories exist. I felt it  
23 was important to talk about that.

24 The next thing is talking about how  
25 filtering is accomplished, I listed some of the

1 details on that. But I would like to say that one  
2 of the important issues is the fact that virtually  
3 every system I know that works in the school or  
4 library type setting has administrative override,  
5 where a person who is in charge, librarian or  
6 administrator, can come over if a site is  
7 inadvertently blocked. So you are not having an  
8 issue so much where a person just can't get to a  
9 site.

10 I wanted to make a comment also out of  
11 the Legislative Journal that Miss Josephs had made I  
12 believe it was on November 4th -- Representative  
13 Egolf's staff was kind to send this to me here --  
14 with regards to the proposed amendment that she had  
15 made. And I wanted to address it just to make sure  
16 that everybody understood how this works.

17 She had made an amendment where there  
18 would be an exclusion to where contemporary history,  
19 anatomy, physiology, anatomical research, health  
20 information, sexual dysfunction sites, pregnancy  
21 education, art history education, biology and sex  
22 education would not be blocked, so that adults or  
23 even children for that matter who may want  
24 information in some of those areas would be able to  
25 go to those.

1                   And in his comments, Mr. Egolf  
2                   basically says that most of the technology out there  
3                   already excludes these types of things. And I would  
4                   just like to reinforce that we are not blocking sex  
5                   education sites, we are not blocking sites, even  
6                   there's some physiological sites that may have what  
7                   you consider nudity in them. But those types of  
8                   sites are not intended to stir the purulent interest  
9                   of the viewer. So because of that, we don't in our  
10                  company block those types of sites. So I wanted to  
11                  address that.

12                   Let me see if I can -- oh, I'd like to  
13                  make one other comment about how these sites are  
14                  caught. There were some comments about how in the  
15                  world could we keep track of so many web sites that  
16                  are out there. And you're absolutely right, it is a  
17                  difficult thing to do. It's virtually impossible to  
18                  be done solely by human review.

19                   Our company, S4F Technologies, has  
20                  what we call computer spiders. And what these  
21                  computer spiders do is they go out and scour the  
22                  Internet for these keywords, metatags which Mr. Burt  
23                  mentioned, and pulls up the web sites that we feel  
24                  probably are sites that would be considered  
25                  pornography. We compare them to our existing list

1 to make sure they're not already in there. But then  
2 we throw them into a pile and then we have humans  
3 review those web sites. And when we do that, we do  
4 it with the images off so that it doesn't put any  
5 undo burden of exposure or those types of things.

6 So my point is, is there is very  
7 sophisticated methods that filtering companies are  
8 using right now to be able to track and effectively  
9 control this. The problem is, is that even in the  
10 time we have been here today, there could be  
11 hundreds, perhaps thousands, of sites that have come  
12 up new. And they may not be original porn sites,  
13 but what they are is sites, people who are reselling  
14 porn sites or perhaps even people who have personal  
15 sites.

16 So you don't see 7,000 new pornography  
17 businesses going up on the Internet. What you may  
18 see is 7,000 a week new people who are reselling one  
19 of the particular adult entertainment industry's  
20 core sites. I hope that makes sense there. We on  
21 the average block in the porn category about 7 to 8  
22 thousand a week is what we're adding.

23 I'm not going to go into any of the  
24 specifics on the client side software, the proxies,  
25 the browser settings. Safe to say that there's

1 different versions for that.

2 I would say just in closing that HB 10  
3 is very well written, especially because it has  
4 terms like reasonably, considered to be harmful to  
5 minors, and those types of things. I think it's a  
6 very well written bill, and I encourage you to pass  
7 this bill, because I think there is a crying need  
8 for filtering and there's a crying need to protect  
9 our children. And I believe that filtering  
10 companies have figured out many ways to do that and  
11 not at the expense of the First Amendment.

12 Thank you.

13 CHAIRMAN MAITLAND: Thank you very  
14 much for your testimony, Mr. Ophus.

15 Any questions? Representative  
16 Josephs.

17 REPRESENTATIVE JOSEPHS: Thank you.  
18 Thank you, Mr. Chairman. Thank you, Mr. Ophus. I  
19 was grateful for the description of the mechanical  
20 and human review of these sites. If I buy your  
21 product, will you show me the list you developed so  
22 I can decide whether or not I want it, of the sites  
23 or the URLs?

24 MR. OPHUS: Yes. There has been  
25 considerable debate about that. And part of the

1 debate has been because some filtering companies  
2 believe because they have competitors and they're  
3 still a business, that that's proprietary  
4 information.

5 My problem with showing a list to  
6 somebody is, is that if I give you the list for you  
7 to look at, then that means some kid can go get a  
8 list of all of these objectionable sites also. So  
9 you're defeating -- you see what I'm saying? You're  
10 defeating the purpose of allowing you to be able to  
11 look at it.

12 Now, I tell you what we do -- and I  
13 don't know about N2H2, we'd have to ask David. Our  
14 company has on its web site, S4F.com, a place where  
15 you can go in and you can type in any URL that you  
16 want to know if we do or don't block that, and we  
17 will come back and say yes or no to you.

18 But, no, we don't publish the entire  
19 list. But it's less about the intellectual property  
20 than it is about just not making that available to  
21 kids.

22 REPRESENTATIVE JOSEPHS: If nobody  
23 bought your software or anybody else's software  
24 because they were not willing to trust your judgment  
25 over their's, what then?

1 MR. OPHUS: Okay.

2 REPRESENTATIVE JOSEPHS: If nobody  
3 bought it. I would not buy your filtering software  
4 unless I got a list of what you were filtering.

5 MR. OPHUS: That's why I believe you  
6 have things like sophisticated categories. In a  
7 case where you have a school or a library --

8 REPRESENTATIVE JOSEPHS: I think that  
9 my question is really rhetorical. If nobody would  
10 buy it without revealing the list, you would reveal  
11 the list.

12 MR. OPHUS: I'm not sure it's as big  
13 of an issue to other people. I know it's an issue  
14 to you because I know we have talked about it here  
15 for a couple of questions. So that means it's an  
16 issue to some people. I know that thought has come  
17 up before.

18 If I had a way to be able to  
19 privately, for the sake of legislation, say we would  
20 love to show you our list so that you could go  
21 through and check it. But let me make another point  
22 on this if I can, and I'll be real short, I promise.

23 The gentleman I testified with from  
24 the ACLU before the U.S. House of Representatives  
25 and Congress made a comment flippantly that, well,

1 even today we found a web site where a chicken  
2 breast recipe was blocked. This information was  
3 kind of just thrown out there.

4 So my response to him was, what  
5 specific software was that, what time was it, where  
6 did it happen. And obviously there was no answer  
7 for that. So I think that there are from both  
8 sides, they're kind of thrown in this direction  
9 because most of those lists aren't available.  
10 However, there are some companies that do make the  
11 list available.

12 REPRESENTATIVE JOSEPHS: This Internet  
13 Safety Organization, who makes up the members?

14 MR. OPHUS: Yes. I'm sorry, I should  
15 have said that. The Internet Safety Association is  
16 mostly -- I wouldn't consider it a lobby  
17 organization as much as I would a trade association  
18 of companies that are filtering organizations.

19 REPRESENTATIVE JOSEPHS: Thank you.  
20 Thank you. That's exactly what I thought.

21 MR. OPHUS: No problem.

22 CHAIRMAN MAITLAND: Representative  
23 Egolf.

24 REPRESENTATIVE EGOLF: Thank you very  
25 much. Thank you for that testimony. I think that

1 was outstanding. I have no questions because you  
2 covered it. The things you haven't covered verbally  
3 are in your written testimony. So I just hope that  
4 people will read that.

5 MR. OPHUS: Thank you.

6 REPRESENTATIVE EGOLF: No questions.

7 CHAIRMAN MAITLAND: I don't have any  
8 either. I could have you here for an hour or two  
9 going over the details. But I really appreciate  
10 what you had to say about the Consumer Reports.

11 MR. OPHUS: May I respectfully make  
12 one last comment if you don't mind because I want to  
13 make sure I say this. I think the point that Miss  
14 Josephs is trying to make is that we all have  
15 somehow a personal interest in this law passing.  
16 And as having a company, there is an element to that  
17 that I believe is true.

18 But on the same note, the reason why I  
19 started this company, and I'm so passionate about  
20 being here, I paid my own way to come up here, I  
21 have no schools or libraries in Pennsylvania that we  
22 service whatsoever.

23 The reason why I'm passionate about it  
24 is because I have four kids, and I know what's out  
25 there because I've spent the last couple years

1 specifically looking at it. So my passion and my  
2 drive to here is not because, oh, goody, the State  
3 of Pennsylvania is going to pass this law. And I  
4 respectfully say that, because that is my intention.  
5 And if you don't mind me, I just wanted to say that.

6 REPRESENTATIVE JOSEPHS: I don't  
7 question your motives or your intention, but you  
8 have a pecuniary interest and so does your -- I  
9 mean, I'm getting paid for doing this job, too.

10 MR. OPHUS: That's true.

11 REPRESENTATIVE JOSEPHS: Thank you.

12 MR. OPHUS: That's fine. Thanks.

13 CHAIRMAN MAITLAND: Thank you very  
14 much. I appreciate your testimony.

15 If our stenographer is still good,  
16 we'll move on then to Sayre Turney and Carrie  
17 Gardner.

18 MS. TURNEY: Good morning. My name is  
19 Sayre Turney, and I am a library media specialist in  
20 the school district of Lancaster, a position that I  
21 held for 33 years. In addition, in the school  
22 district I serve as a charter member of our  
23 Technology Overview Committee. And for your  
24 information, our district has 11,000 plus students  
25 housed in 22 buildings. I also serve as Chair of

1 PSEA's Legislative Committee.

2 At the request of Patsy Tallarico,  
3 President of PSEA, Carrie and I are representing the  
4 159,000 members of the Pennsylvania State Education  
5 Association. Dr. Gardner is from the Milton Hershey  
6 School District.

7 House Bill 10 raises the question of  
8 local determination versus State determination on a  
9 subject that until now was entirely a local matter.  
10 On one hand, school districts are concerned about  
11 protecting the children we serve from inappropriate  
12 material at any time. On the other hand, educators  
13 have a deep and abiding interest in preserving the  
14 decision-making process of parents and school  
15 children -- excuse me, parents and school officials  
16 in selecting age appropriate materials for the  
17 education of children.

18 Educators would certainly not allow a  
19 magazine stand selling pornographic literature to be  
20 set up in the lobby of one of our high schools.  
21 The inappropriateness of such an act is obvious.

22 For decades prior to the advent of the  
23 Internet, educators had to deal with students who  
24 would bring inappropriate materials into their  
25 schools. For the most part, these incidents were

1 handled by teachers and principals in time honored  
2 ways by policies and procedures locally adopted.

3 In the electronic age, we have the  
4 prospects of having the inappropriate material enter  
5 the school via the Internet. In reality, this is  
6 just a variation on the ways enterprising youngsters  
7 used in the past to sneak offensive material into  
8 school.

9 Not surprisingly, the education  
10 community has responded by adopting acceptable-use  
11 policies. These policies are largely locally  
12 developed or are adaptations of policies shared by  
13 other school districts. Not only have the  
14 acceptable-use policies been adopted, but  
15 consequences for violating the policies are in place  
16 in our State school districts.

17 A law requiring State approval and  
18 State sanctions would have the effect of imposing a  
19 one-size-fits-all solution to a problem that is  
20 already being treated by local officials.

21 In my own school district when a  
22 teacher plans a research unit, the teacher and I  
23 meet and come up with a list of acceptable Internet  
24 sites that students may use. Students are then made  
25 aware of the list and of the consequences of

1 deviating from it.

2           Considering all aspects of the  
3 problem, PSEA has concluded that the need to have a  
4 law with a Statewide effect is largely unnecessary.  
5 Before the time of the Internet, controlling  
6 appropriate materials used in a school curriculum  
7 was in retrospect easy. Most, if not all, the  
8 school districts in Pennsylvania have acceptable-use  
9 policies.

10           Judging from the low number of  
11 complaints and comments we received from our members  
12 on this subject, we can conclude that the policies  
13 in place are adequately protecting students from  
14 inappropriate materials on the Internet.

15           We have also followed the development  
16 of screening software. Although the software is  
17 becoming more and more sophisticated, it does not  
18 perform perfectly. Imposing the use of filtering  
19 software that has been shown to be troublesome on  
20 the schools and libraries is to impose a large  
21 number of headaches.

22           So the challenge would seem to be  
23 weighing the need to create a law that would require  
24 school districts to have Internet usage filtered  
25 versus retaining local control for school districts

1 to choose age appropriate materials on the Internet.

2 House Bill 10 would remove a large  
3 measure of local authority to make self  
4 determination on appropriate use policies, sanctions  
5 for offenders and control over the costs of software  
6 and personnel needed to operate a filtering  
7 operation.

8 To go into these issues in more  
9 detail, I will turn to Dr. Carrie Gardner,  
10 Coordinator of Library Media Services at Milton  
11 Hershey School, a position she has held for two  
12 years. She also serves on the Board of Directors at  
13 the Pennsylvania School Librarians' Association and  
14 has chaired the American Association of School  
15 Librarians' Intellectual Freedom Committee.

16 Her focus will be on the use of  
17 filtering software and the issue of acceptable-use  
18 policies and training.

19 MS. GARDNER: Thank you. Thank you  
20 for the opportunity to present PSEA's views on these  
21 matters.

22 I would like to take a few moments to  
23 talk about how implementation of this law would  
24 affect day-to-day operations in Pennsylvania schools  
25 and specifically school libraries. I have spent my

1 life working in and around school libraries.

2 From the testimony given before us, I  
3 feel that you have a good background on how  
4 filtering software works. I would like to give you  
5 some real life examples of how when filtering  
6 software was employed, the educational process was  
7 interrupted.

8 You've heard about keyword filtering.  
9 Commonly used filtering packages have keyword  
10 filtering built in. You've heard about the breast  
11 example. I won't focus on that.

12 XXX is an example that is mentioned in  
13 some of the testimony. It does designate in our  
14 society pornographic information. It is also  
15 commonly used as a Roman numeral. Scientific papers  
16 posted on the web by researchers often employ Roman  
17 numerals. Youngsters wanted to access scientific  
18 papers, research reports, are often blocked from  
19 those sites simply because somewhere in the paper  
20 XXX appears together.

21 Another example that caused quite a  
22 flurry in the school library community happened a  
23 few years ago when Federal tax dollars funded a  
24 little rover to Mars. NASA was able to beam back  
25 instantaneously photos of the martian surface for

1 the first time in the history of mankind.

2           They posted those pictures to a web  
3 site, and they named -- the URL of the web site was  
4 marsexplorer.nasa.gov. S-E-X was in the middle of  
5 that word; the last s in Mars, the ex from explorer.  
6 And, in fact, those pages were blocked from school  
7 students because of the URL. Obviously, nothing  
8 pornographic was found on the surface of Mars.

9           I would like to talk for a moment  
10 about something that teachers call the teachable  
11 moment. Working with young people today is an  
12 interesting fast-paced experience. The youngsters  
13 of today are very busy. We have all heard about how  
14 hurried our children are, how involved they are in  
15 extracurricular activities.

16           And many of them have short windows of  
17 time to do their research. And if they encounter  
18 filtering software, it does two things. One, it  
19 prevents them from accessing the information they  
20 need to complete their assignment. The second thing  
21 it does is that it presents an air of mistrust. It  
22 presents a roadblock for students intellectually,  
23 and they are not stupid. They recognize that what  
24 they are trying to do is simply complete their  
25 assignments as given by their teachers, not do

1 something immoral, illegal, etc.

2 An interesting thing that has happened  
3 with this filtering packages as of the last year is  
4 that they have decided to block the work high,  
5 H-I-G-H. And, in fact, many school web sites  
6 contain the word high adjacent to the word school,  
7 because it is, indeed, a web site for their high  
8 school. For example, Lebanon High School.

9 And their own web sites are filtered  
10 in their own school systems.

11 House Bill 10 in Section 4A3 and  
12 Section 5C provides expedient review and resolution  
13 of a claim that the policy is denying a student or  
14 other person access to material that is not within  
15 the prohibition of the acceptable-use policy.

16 On a practical day-to-day operational  
17 level, school systems do not have the extra  
18 personnel to deal with those requests that would  
19 inevitably come into play. It would not be unusual  
20 to receive 10, 12, 20, 30 requests from one school  
21 building.

22 My co-presenter here works in a school  
23 district with 22 school buildings. And there would  
24 need to be personnel hired at great expense to  
25 handle those requests, and that is an undue burden

1 that the school districts are not in a position to  
2 handle.

3           What would be gained by such a  
4 requirement above the present locally controlled  
5 system? Very little. Years ago, long before the  
6 Internet was a word in our vocabulary, did  
7 inappropriate material come into school buildings?  
8 Yes. Did we as educators handle it? Yes. Did we  
9 need a law requiring a search of every student  
10 before they entered the school? No.

11           Most, if not all, school districts  
12 already have acceptable-use policies. They were  
13 developed by local citizens looking at local  
14 situations in order to meet the local needs of their  
15 students and educators.

16           I have appended to the testimony a  
17 number of examples from across the State. I  
18 purposely chose some small rural districts, some  
19 large urban districts and a few suburban districts.  
20 You can see that there are similarities, but yet  
21 there are differences based on those local districts  
22 situations.

23           Many of the districts have taken a lot  
24 of time and effort to develop policies that included  
25 the input of local community leaders, not just

1 school board members, local religious leaders, local  
2 stakeholders in education. And to supersede this  
3 with a State law would disenfranchise that entire  
4 process.

5 Finally, House Bill 10 will reduce the  
6 opportunity educators in our State have to teach  
7 students how to act appropriately on the Internet.  
8 The reason I remain in K through 12 education is  
9 that I believe firmly that we have to educate young  
10 people about how to be productive citizens of this  
11 world. And in this day and age, in order to be  
12 productive citizens, students must be able to handle  
13 themselves appropriately on the Internet. And the  
14 job of a K through 12 school district is to teach  
15 that set of skills to the students.

16 Filtering Internet access runs a high  
17 risk of taking that away, taking that skill set away  
18 from our young people.

19 I will now turn it back to Ms. Turney  
20 who will discuss cost.

21 MS. TURNEY: Filtering software for  
22 individual computers or resident software on a  
23 server will have cost implications for school  
24 districts. The initial cost is approximately \$40  
25 per computer.

1           Currently, my own district has looked  
2           at some free and been exploring some free filtering  
3           software, only to find that it won't work with our  
4           firewall or it won't work with our main frame server  
5           and so forth. If we had to spend approximately \$40  
6           per computer in our district, I am guessing that the  
7           cost would exceed a hundred thousand dollars. And  
8           that doesn't count the man hours to install that  
9           software and get it up and that it works with  
10          everything. Keep in mind, my district right now has  
11          a 2.2 million dollar budget deficit.

12                 The software is in constant  
13          development so upgrades are frequent. This amounts  
14          to additional cost. The expedited review process  
15          provision would require systems personnel to be  
16          constantly tweaking the filter for individuals  
17          seeking information blocked by the mindless  
18          software.

19                 Either personnel would need to be  
20          hired to fill the need or the student would be  
21          denied access to the information in a timely manner  
22          because the district was not able or willing to hire  
23          adequate staff.

24                 In the first instance, considerable  
25          cost would be incurred. In the second, loss of a

1 learning opportunity would occur. Some intermediate  
2 units offer a filtering program for a fee. The cost  
3 is significant when upgrades, technician time,  
4 software purchase, etc. are considered.

5 Finally, the mandated review  
6 requirements of the acceptable-use policy by the  
7 Secretary of Education would add to the clamor of  
8 accusations of needless regulatory requirements.

9 If Act 48 approval by the Department  
10 of Education can serve as an example, turn around  
11 time is three to four times longer than advertised.  
12 To speed it up would require additional personnel  
13 and additional cost.

14 I want to thank you for your time, and  
15 we look forward to answering your questions.

16 CHAIRMAN MAITLAND: Thank you very  
17 much for your testimony. Representative Josephs.

18 REPRESENTATIVE JOSEPHS: The Chairman  
19 is so nice to me. Thank you, Mr. Chairman.

20 I was very interested, Dr. Gardner, in  
21 your talk about the moment of teachability, which I  
22 notice is much more pronounced among my  
23 grandchildren than I remember with my own children.  
24 I think you are right. The demands that are made on  
25 children are beginning to be as onerous as the

1 demands made on adults, but that's a whole other  
2 discussion.

3 I was struck by that in thinking over  
4 the testimony from one of the gentlemen from one of  
5 these companies who claimed, I believe, that 50  
6 percent of the people were in the library or some  
7 very large number for the sole reason of accessing  
8 porn sites. But when those porn sites were filtered  
9 out that none of the librarians could notice a  
10 difference in day-to-day operations.

11 So I'm wondering -- I mean, I didn't  
12 mention it at that point, because I thought it would  
13 fall of its own weight. But then later on I thought  
14 maybe I should bring that up.

15 I would be very interested -- of  
16 course, you don't have the same kind of monetary  
17 interest in collecting those kinds of antidotes or  
18 those kinds of incidences. But if you know of them,  
19 I think it would be very important for us to hear  
20 what kind of incidents happen when library patrons  
21 of school libraries, whether it's the parents of  
22 these children or the children themselves or high  
23 school students have, when they encounter these  
24 things. And what happens to them when they  
25 encounter the filters, and what might happen to them

1 when they go to someone to ask whether -- that the  
2 filter be disabled.

3 MS. GARDNER: Certainly. Let me say  
4 that I deal primarily in school libraries. And most  
5 of the patrons in the school library are adults  
6 connected with the educational process and the  
7 students.

8 There have been a number of instances  
9 across the country where school employees have been  
10 fired or disciplined for using computers  
11 inappropriately. There have been instances of that  
12 in corporate America in businesses all across the  
13 country.

14 What's interesting is that it is not  
15 necessarily porn. It can be the stock quotes,  
16 someone who is too concerned about the performance  
17 of their portfolio and not concerned enough about  
18 the job of which they were hired to do.

19 I am not aware of instances of adults  
20 looking at pornographic information in a school  
21 library setting. That has just not come across my  
22 desk.

23 When students look at something that's  
24 inappropriate -- and, again, if they're in the  
25 library to do research on their science term paper,

1 looking at a Shakespeare site could be deemed  
2 appropriate and would be cause for an adult in  
3 charge of those students to say, young man, you are  
4 on one site, you need to get back to the science  
5 site so that you are completing the assignment for  
6 which you are here.

7 In a school situation, there are  
8 adults working with youngsters to make sure that  
9 they are on task.

10 REPRESENTATIVE JOSEPHS: Well, if you  
11 do know of people who are aggrieved by filtering  
12 mechanisms, I would appreciate you forwarding them  
13 to the Subcommittee or the Committee Chair. I don't  
14 know what the procedure is. Do they go to you or do  
15 they go to --

16 CHAIRMAN MAITLAND: I guess they go to  
17 me and I make them available to the Committee.

18 REPRESENTATIVE JOSEPHS: So the  
19 Subcommittee Chair. I would appreciate that from  
20 anybody who is here who is a librarian or a teacher.  
21 Thank you. Thank you, Mr. Chairman.

22 CHAIRMAN MAITLAND: Representative  
23 Egolf.

24 REPRESENTATIVE EGOLF: Thank you.  
25 Thank you for your testimony. Both of you are

1 citing a lot of reasons why there could be problems  
2 from filtering in the schools, but 74 percent of the  
3 schools are already doing it. How do you reconcile  
4 that? They're doing it on their own without even  
5 having any legislation requiring it. Why would they  
6 be doing it if there are so many problems and it  
7 doesn't work or it's too costly or all these things?  
8 How do you reconcile that?

9 MS. GARDNER: I reconcile that with  
10 the local decision. Across this nation, school  
11 systems have looked at the issues of Internet access  
12 and made the decision about whether or not filtering  
13 is appropriate for their situation.

14 In those districts that have decided  
15 to filter, my guess is that they have the financial  
16 resources to hire someone to monitor that filtering  
17 software and that that person, a part of their job  
18 is to be available to make sure that they can tweak  
19 that software and allow access to the perfectly  
20 acceptable, educationally valid sites that are  
21 inevitable blocked by filtering software.

22 REPRESENTATIVE EGOLF: I would think  
23 if three quarters of the schools are doing this, if  
24 75 percent are doing this, there must be a problem  
25 out there that they are trying to prevent or cure.

1 So I think that tells us something. If they are  
2 doing it on their own and they are handling all  
3 these problems you're citing while doing it, there  
4 certainly there must be some good reason for it.

5 MS. GARDNER: I would be happy to  
6 forward to the Chairman three research studies about  
7 the number of school libraries filtering. One study  
8 published in School Library Journal puts that number  
9 at 33 percent. I think I'm aware of the study that  
10 you're citing that has it at 74 percent. And the  
11 University of Indiana recently published research  
12 that had it around 45 percent.

13 So it seems to me that there is a lot  
14 of conflicting research about those numbers.

15 REPRESENTATIVE EGOLF: That certainly  
16 is something -- if it's that different, there's got  
17 to be something wrong. It should be easy to get  
18 those figures I would think.

19 You had cited some of these problems  
20 with keyword filtering, but we just had testimony  
21 that that's pretty old technology. How long ago was  
22 this that you -- you're citing something like NASA  
23 dating back to the Mars Explorer and having blocked.  
24 When was that? How long ago?

25 MS. GARDNER: Well, actually that

1 example took place a few years ago, because that's  
2 when the rover was walking around on Mars. The  
3 incidents of high are about a month old, the  
4 incidents of high school being blocked.

5 What happens is school districts  
6 implement filtering software, and then the person in  
7 charge of it must educate themselves and learn to  
8 tweak it. And actually we have to hope that they  
9 purchased a package that allows them to unblock or  
10 allow access to sites that are blocked.

11 It's entirely possible that they could  
12 have purchased a system that does not allow that,  
13 and then the educational community in that district  
14 must deal with not having access and not being able  
15 to do anything about it.

16 REPRESENTATIVE EGOLF: That's probably  
17 a good reason for having the Secretary provide a  
18 list of filters that do what we want them to do.  
19 Because what you're saying is if they just go out  
20 there and do it on their own, they're going to maybe  
21 get some bad filters or not good and so on. So it's  
22 probably just a good thing then to have a list of  
23 acceptable filters.

24 MS. GARDNER: Only if the Secretary of  
25 Education is provided with the funds to hire the

1 people to really do the research on the filtering  
2 software.

3 REPRESENTATIVE EGOLF: I think they  
4 probably would be if they're going to do it for all  
5 the schools.

6 I have a question. You mentioned  
7 about selecting -- preserving the decision-making  
8 process of parents and school officials in selecting  
9 age appropriate materials for the education of  
10 children. How does the appropriateness of child  
11 pornography and obscenity and material harmful for  
12 minors, which are already defined in statute, how  
13 can that change from one place to another? And  
14 based on age, how can that change from different  
15 ages and so on?

16 I mean, it's straightforward across  
17 the board from computer to computer it's all the  
18 same. So how can that vary in necessity to look at  
19 that based on age and based on different schools?

20 MS. GARDNER: It is my understanding  
21 that child pornography is illegal in this country.  
22 It is my understanding that obscenity is a  
23 legally-defined term and that anything declared  
24 obscene is also illegal.

25 So when librarians talk about age

1 a bad thing and have this decided at a higher level  
2 than the local level when it is a straightforward  
3 decision and takes it out? There is no decision to  
4 make at the local level. Do you see what I'm  
5 saying? There's no decision that your school versus  
6 this school. It's already illegal. It's already  
7 decided.

8 MS. GARDNER: If filter software only  
9 filtered out obscenity and child pornography, I know  
10 I wouldn't be sitting here. But the fact of the  
11 matter is that filter programs filter out lots of  
12 information.

13 In school systems across the State, we  
14 teach health, and part of health involves the human  
15 body. And many of those sites are filtered. One of  
16 my favorite sites that I found filtered was some NIH  
17 sites, National Institutes of Health sites, that  
18 talked about diseases of the body, because indeed  
19 they had black and white pencilled drawings. And  
20 those were filtered last summer when I was working  
21 with a group in Washington.

22 Those sites were filtered, but yet  
23 they were Government sites directed at consumers.  
24 Our young people can benefit by having access to  
25 that knowledge, including high school students

1 learning about health issues.

2 REPRESENTATIVE EGOLF: The legislation  
3 allows that. In other words, the legislation makes  
4 a minimum, says you will filter obscenity and child  
5 pornography and material harmful for minors at a  
6 minimum. But then you can go beyond that and filter  
7 other things if you want. That can be a local  
8 decision.

9 With the filtering that's required  
10 here, it does exactly what you want. It takes out  
11 the illegal material automatically as a minimum  
12 required by legislation, but it allows you then to  
13 do other things, to restrict it further if you want,  
14 but certainly not to restrict it less because it is  
15 already illegal and it's everywhere. So I don't see  
16 that that conflicts with what you're saying.

17 MS. GARDNER: I see that it does  
18 conflict. We have trained educators who are there  
19 and know those kids and are able to say, you know,  
20 you need to be accessing this information. You are  
21 doing your report on Sylvia Platt poetry, you need  
22 to be accessing those web sites.

23 And so teachers are working right  
24 alongside those students to teach them the  
25 higher-level thinking skills to be able to

1 discriminate the information they need, and that  
2 translates into later life. We all have to be  
3 consumers of information as adults, and we're trying  
4 to instill those skills into our youngsters in the K  
5 through 12 world.

6 REPRESENTATIVE EGOLF: So they should  
7 be allowed to have the pornography come in and teach  
8 the children to look at it and decide what is  
9 appropriate?

10 MS. GARDNER: No. They should be  
11 allowed to develop the skills needed to determine  
12 what information is appropriate for a given  
13 situation.

14 REPRESENTATIVE EGOLF: Including  
15 pornography?

16 MS. GARDNER: Actually, I have to tell  
17 you that a number of years ago I worked as a high  
18 school librarian, and I was standing over a child's  
19 shoulder and the English teacher was standing over  
20 her other shoulder. And a page with a partially  
21 nude woman came up, and it actually probably had to  
22 do with the metatags. And that young woman clicked  
23 the back button, went off of that page and went to  
24 the next hit in her search.

25 And I blush. And when I blush, I can

1 going on. They know. We have a few slick ones, and  
2 we did discipline one severely this year. But  
3 that's one out of twelve hundred kids. In most  
4 cases, my kids know what's inappropriate and they  
5 know to ask for help. Because they're scared to  
6 death they're going to lose their computer  
7 privileges, and they don't want that to happen to  
8 them.

9 REPRESENTATIVE EGOLF: I have a lot of  
10 questions. I think I'll -- that's fine.

11 CHAIRMAN MAITLAND: Mrs. Turney, Dr.  
12 Gardner, thank you very much for your testimony.  
13 It's greatly appreciated. Thanks for your time here  
14 today.

15 Move on then next to invite Miss Laura  
16 Morgan, librarian with the Chicago Public Library.

17 MS. MORGAN: Good afternoon. Can you  
18 hear me okay?

19 My name is Laura Morgan, and I am the  
20 architectural librarian at the Chicago Public  
21 Library, a position I have held since 1989.

22 I want to thank Representative Allan  
23 Egolf and the Pennsylvania House Judiciary Committee  
24 for giving me the opportunity to submit testimony in  
25 support of House Bill 10, the Child Internet

1 Protection Act. I also wish to commend all of the  
2 individuals who support this critically important  
3 legislation.

4 I am speaking today as a concerned  
5 citizen and parent and am not representing my  
6 employer. One might wonder why a librarian would  
7 travel from Illinois to speak on behalf of a  
8 Pennsylvania Internet filtering bill.

9 The answer is this. The topics I will  
10 discuss regarding Internet pornography are relevant  
11 to every public library in the United States that  
12 offers Internet access.

13 Before I begin speaking about the  
14 negative impact of Internet porn in libraries,  
15 however, I want to stress that my criticism should  
16 not diminish the numerous positive aspects of  
17 libraries. I have been a fan of libraries since I  
18 was a child. And when I completed by degree in  
19 library science, I was truly grateful to be hired by  
20 one of the finest public libraries in the United  
21 States, if not the world.

22 In fact, it is because of this deep  
23 regard for the library profession that I chose to  
24 become an outspoken critic against -- of  
25 unrestricted Internet policies. Since the summer of

1 2000, I have raised my concerns to the Chicago  
2 Public Library Administration and its Board of  
3 Directors. I've testified at two Illinois House  
4 hearings on this matter, and most recently testified  
5 before the U.S. House of Representatives at a  
6 hearing entitled E-rate and filtering.

7           Although the Internet is an incredibly  
8 valuable tool on many levels, it has also made  
9 available a sizable amount of unreliable, false and  
10 offensive material that was previously unknown in  
11 public libraries and public schools.

12           The primary concern in the library  
13 setting has been the easy access to pornography,  
14 from soft-core to illegal obscenity and child  
15 pornography. Libraries across the United States are  
16 dealing with this issue in many different ways,  
17 ranging from restricting access via filters or  
18 acceptable-use policies to no restrictions at all.

19           Since the beginning, the Chicago  
20 Public Library and countless others adopted the  
21 latter anything goes kind of policy. Although many  
22 of the incidents I will report today occurred at the  
23 Chicago Public Library, I want to stress that they  
24 are by no means unique to that institution.

25           In his report entitled, Dangerous

1 Access, Uncovering Internet Pornography in America's  
2 Libraries, David Burt, who is a guest here today,  
3 documented numerous similar incidents occurring at  
4 libraries across the country.

5 As I see it, the goal of House Bill 10  
6 is to minimize the many negative consequences that  
7 can result from the easy availability of Internet  
8 porn at public libraries and public schools.

9 The first point in the bill's  
10 declaration of policy states, the Commonwealth has a  
11 compelling interest and duty to protect children  
12 from exposure to obscenity, child pornography and  
13 other materials harmful to minors.

14 The basic concept of protecting  
15 children is one point that most people tend to agree  
16 with and one that is reflected in many restrictions  
17 for minors already exist in our society. For  
18 example, minors under the age of 18 cannot purchase  
19 pornographic magazines in their local convenience  
20 store, patronize X-rated bookstores, rent X-rated  
21 videos and so on.

22 Unfortunately, because of the Internet  
23 however, far too many young people access or are  
24 exposed to pornography in public libraries and  
25 public schools, both intentionally and

1       unintentionally. As a parent of two children  
2       myself, this is my number one concern.

3                   I have spoken to several Chicago  
4       public library children's staff members who have  
5       described incidents of children under the age of 14  
6       viewing pornography in children's departments.

7                   In defense of their policy, the  
8       library administration claims that staff can monitor  
9       what kids are doing at all times while they are  
10      using the computers. Many staff have told me this  
11      is not possible. I think this is an important point  
12      to bring up, because some of the previous testifiers  
13      claim that these acceptable-use policies work and  
14      that people can monitor this. And, as I said, it is  
15      simply not possible, and many of the librarians at  
16      my own institution have told me this.

17                  For example, when I was working at a  
18      branch library for just a few weeks in the month of  
19      December, a little 9-year-old girl, again 9 years  
20      old, told me that it bothered her when she went into  
21      that library branch and saw the boys looking at what  
22      she called nasty pictures on the computers.

23                  I want to ask what kind of a message  
24      does that give to a child of that age when she goes  
25      about her local library, the place that is touted as

1 a safe haven for a safer neighborhood. Those are  
2 actually the words on a sign on the door of that  
3 library, which by the way is in a pretty rough  
4 neighborhood in the City of Chicago.

5 At that branch, I also witnessed how  
6 adept some of the boys are at hiding what they are  
7 doing because they change the screen when someone  
8 walks by. After they left the library, I could  
9 easily see by looking at the recent search history  
10 and bookmarks that they had accessed extreme triple  
11 X porn sites. Have we as a society become so  
12 desensitized that this does not bother us? I  
13 sincerely hope that's not the case.

14 In addition to children under the age  
15 of 14 accessing porn in children's departments,  
16 minors under the age of 18 have been known to access  
17 porn in the subject departments of the central  
18 library where I work, as well as on the adult  
19 computers in the branches.

20 I believe it is obvious that many  
21 patrons, and in particular teenage boys,  
22 deliberately seek out Internet porn in libraries.  
23 This will continue to be true regardless of how many  
24 American Library Associations, educational programs  
25 or acceptable-use policies are in place.

1           The fifth and sixth points in the  
2           declaration of policy deal with the issue of sexual  
3           harassment. There is no question that the issue of  
4           sexual harassment is critical to this and similar  
5           bills, both ethically and legally.

6           From my own experience and from what I  
7           read and hear about from other libraries, the  
8           Internet porn surfers are almost exclusively male,  
9           and the staff and patrons who take offense to the  
10          pornography are overwhelmingly female. Not only  
11          does this present a danger to women and children,  
12          but the entire environment of the library suffers  
13          because of it.

14          In my own workplace, the unlimited  
15          free access to pornography is attracting men who can  
16          only be described as hard-core porn addicts. Almost  
17          every day on the floor where I work, I see many of  
18          the same adult men and teenage boys viewing and  
19          sometimes printing pornography. Security guards  
20          have told me that some of these men surf for triple  
21          X porn for hours on end going from floor to floor.  
22          Our building is the largest public library in the  
23          United States. We have ten stories, so they have  
24          many places to roam.

25          I was frequently told that the porn

1 surfers now even frequent our ninth floor special  
2 collections reading room, where one staff jokingly  
3 refers to these men as Internet scholars. If the  
4 fact that male patrons are allowed to porn surf is  
5 not bad enough, consider for a moment the behavior  
6 that it encourages, including overt harassment and  
7 public exposure and masturbation.

8           And I know I've heard the argument  
9 that this is always happening in libraries, which I  
10 think is a pretty ridiculous comment. Surely, there  
11 has been bad patron behavior in libraries prior to  
12 the Internet, but when you make hard-core porn  
13 available, there is no doubt that these behavioral  
14 problems are increasing.

15           Not surprisingly, library patrons also  
16 have been offended. I have had several adult female  
17 patrons complain to me about this issue on the floor  
18 where I work, and it has also happened throughout  
19 the central building and in the branches.

20           I think it is one thing to argue that  
21 library employees must put up with this as a  
22 condition of employment, but I think it is quite  
23 another to argue that female patrons must also  
24 endure unwanted exposure to pornography due to the  
25 alleged rights of the almost exclusively male porn

1 surfers.

2 I also want to comment, too, that  
3 sometimes the argument is that, well, we don't get  
4 any complaints about this, there must not be a  
5 problem. I believe the Commissioner of the Chicago  
6 Public Library at one point said they had only  
7 received three formal written complaints in five  
8 years.

9 Now, just in the last month, I have  
10 had, I believe, three verbal complaints from female  
11 patrons. And whether or not those people write a  
12 formal letter, who knows if they're going to go to  
13 that level. But, again, the lack of formal  
14 complaints is not an indication of no problem.

15 The issue of Internet porn creating a  
16 sexually hostile workplace is particularly relevant  
17 in light of a recent case involving the Minneapolis  
18 Public Library, which was mentioned earlier. In May  
19 of 2000, twelve library staff members made a  
20 complaint with the local EEOC over the egregious  
21 working conditions which were a direct result of a  
22 similar open-access policy.

23 According to the Minneapolis Star  
24 Tribune, "Librarians complained of hard-core  
25 pornographic web sites left visible on vacated

1 terminals, etc. Pictures included scenes of  
2 bestiality and child molestation." Patrons  
3 complained that anyone walking through the library  
4 could see porn on computers.

5 On May 23rd, 2001, just two weeks ago,  
6 the EEOC concluded that due to the library's  
7 unrestricted Internet access policy, the  
8 administration had, indeed, subjected its staff to a  
9 sexually hostile work environment which is a  
10 violation of Title 7 of the Civil Rights Act of  
11 1964.

12 Although the EEOC is not involved with  
13 the Chicago Public Library case, the issue of  
14 Internet porn is now under full investigation by the  
15 City of Chicago's Sexual Harassment Office. This  
16 happened as a direct result of comments I made at  
17 the public library board meeting September 19th of  
18 2000. Because I used the phrase sexually hostile  
19 work environment, I was asked to speak to attorneys  
20 in the Sexual Harassment Office.

21 A positive result of my three and a  
22 half hour meeting with the attorneys on December  
23 1st, 2000, was their decision to commence a  
24 full-scale investigation. Considering that the  
25 corporate world is taking the issue of Internet porn

1 very seriously in light of sexual harassment  
2 lawsuits, I am pleased that the City of Chicago is  
3 at the very least looking into the matter.

4 The second point of House Bill 10's  
5 declaration of policy deals with the issue of  
6 obscene material and child pornography. In a  
7 hearing I attended last September, Bill Harmening,  
8 Deputy Chief of Investigations for High Tech Crimes  
9 in the Illinois Attorney General's Office stated  
10 that "it is common knowledge in the business of  
11 pedophiles and traders of child pornography to go to  
12 your public library and download it because it's  
13 there."

14 Although he was not speaking  
15 specifically about the Chicago Public Library, I  
16 have heard accounts by guards and staff that patrons  
17 are accessing child porn on library computers on  
18 occasion. And the point is, too, apparently the  
19 guards have been told that people are allowed to  
20 view it, only when they print it is that considered  
21 a crime. Considering the heinous nature of these  
22 kind of images, I find it simply unconscionable that  
23 the library administration allows patrons to even  
24 view such materials.

25 Next, I would like to discuss the two

1 methods of restricting access to the Internet; the  
2 acceptable use tap-on-the-shoulder method versus  
3 filtering. If one accepts the premise that viewing  
4 and printing triple X porn in public libraries and  
5 public schools is inappropriate, I firmly believe  
6 that Internet filtering is the most efficient and  
7 effective solution.

8           Library administrators who prohibit  
9 porn surfing often claim that their acceptable-use  
10 policies are a solution to the problem. Such a  
11 policy would certainly deter some of the porn  
12 surfers at the Chicago Public Library, but I have  
13 become increasingly convinced that these policies  
14 are not adequate.

15           On April 6th, 2001, in a local  
16 Pennsylvania paper, the Lancaster New Era, in the  
17 newspaper they clearly illustrated the inadequacy of  
18 these acceptable-use policies at their local  
19 libraries. The newspaper stated, "the rule is  
20 clear, you are not allowed to use the Internet in  
21 any of Lancaster County's public libraries to look  
22 at porn. To do so is offensive, an abuse of  
23 privileges, an inappropriate use of taxpayer money."  
24 But it's happening. Strict policies and threats of  
25 having their computer privileges stripped are

1 failing to stop a small number of library members  
2 from scouring the Internet for X-rated material, the  
3 New Era found. An analysis of computer files at  
4 twelve libraries discovered traces of pornography at  
5 eight.

6 Similarly, staff at the Minneapolis  
7 Public Library report that even though conditions  
8 improved once the administration was pressured to  
9 adopt an acceptable-use policy, they still have  
10 patrons who attempt to break the rules and surf for  
11 porn. In fact, just in March they had a child  
12 pornography bust at that library.

13 Another drawback of  
14 tap-on-the-shoulder policies are that they are  
15 inherently much more intrusive and subjective than  
16 filters, because they imply that library staff are  
17 watching what patrons are viewing on the computers,  
18 all the while making inconsistent individual  
19 judgments about site content. Even the ACLU agrees  
20 on this point.

21 I also want to mention that the  
22 Chicago City Counsel Education Committee recently  
23 held a hearing. They had put forth a resolution to  
24 require Internet filters on all Chicago public  
25 schools. Some have done it already on their accord,

1 but they are putting forth a resolution to require  
2 it, because they had representatives from the  
3 Chicago public school stating that the  
4 acceptable-use policies simply weren't working.

5 And now regarding the arguments  
6 against filtering and other forms of restricting  
7 access to porn, I discussed many of these things in  
8 detail in my written testimony. I only want to  
9 touch on one today, and that is the First Amendment.

10 Along with the hierarchy of the  
11 American Library Association which is headquartered  
12 in Chicago, and the America Civil Liberties Union,  
13 the Chicago Public Library administration believes  
14 that library patrons have a First Amendment right to  
15 view virtually anything on the Internet, including  
16 hard-core porn.

17 Lofty sentiments about the U.S.  
18 Constitution and civil liberties are dramatically  
19 professed in order to rationalize that which seems  
20 clearly indefensible to the majority of politicians  
21 and the public at large. Could the authors of the  
22 Constitution have envisioned young children  
23 accessing or being exposed unintentionally to triple  
24 X porn, male patrons surfing for triple X porn for  
25 hours on end, female patrons leaving in disgust,

1 library staff being told this is part of their job  
2 as I have been told, or patrons accessing child  
3 porn, all in the name of intellectual freedom and an  
4 absolutist view of the First Amendment? I think  
5 not.

6 The plain truth remains that public  
7 libraries have never been in the business of  
8 providing triple X pornography in print, not to  
9 mention illegal obscenity and child porn. The  
10 argument that libraries must provide it now simply  
11 because it is available via the Internet is absurd.

12 The Internet policy of the Santa Cruz  
13 Public Library sums this idea up well by stating in  
14 their policy, "while protected by the First  
15 Amendment to the U. S. Constitution, sexually  
16 graphic Internet sites are best suited for private  
17 viewing. The library is a public space."

18 In conclusion, I want to say that as a  
19 librarian, I am concerned about what the open access  
20 to pornography means to the future of public  
21 libraries. Must we now add X-rated bookstore to our  
22 list of services? Is that what the public library  
23 has now become? Think about that and what that says  
24 about the library as a public institution.

25 Regardless of what most people think

1 of pornography on a personal or philosophical level,  
2 I believe that many Americans would agree that  
3 viewing and printing it in a public library building  
4 or school is at best highly inappropriate and at  
5 worst a violation of a number of State and Federal  
6 laws.

7 While some libraries have acted  
8 responsibly and at the very least have installed  
9 filters in children's rooms and attempted to enforce  
10 acceptable-use policies for adults, many have not.

11 In a speech discussing the urgent need  
12 for the Federal Children's Internet Protection Act,  
13 Senator John McCain stated the following:

14 "What is happening in schools and  
15 libraries all over America in many cases is an  
16 unacceptable situation." Unfortunately, the Senator  
17 is absolutely correct. While the hierarchy of the  
18 ALA and some others in the library profession will  
19 try to marginalize outspoken people like myself as  
20 right-wing extremists, I am proud to say that I have  
21 always considered myself a liberal. And in the end,  
22 supporting Pennsylvania House Bill 10 and similar  
23 legislation is not a matter of left or right,  
24 liberal or conservative. It is a matter of common  
25 sense.

1 I hope that my testimony has  
2 highlighted the seriousness of the issue, the  
3 compelling need for such legislation and will  
4 encourage others in the library profession to speak  
5 out. The time to act is now.

6 Thank you.

7 CHAIRMAN MAITLAND: Thank you very  
8 much for that testimony, Ms. Morgan. I know you  
9 came a long way to deliver it. It's obviously very  
10 heartfelt on your part.

11 Are there any questions?

12 Representative Josephs? Representative Egolf?

13 REPRESENTATIVE EGOLF: No questions.  
14 I thank you very much for that absolutely  
15 outstanding testimony. Unfortunately, I know you  
16 skipped a lot in here because of time constraints,  
17 but it's in here and we have it. And I hope it's  
18 read by many. There are many good examples or bad  
19 examples, I guess, of what's happening out there.

20 So thank you very much for coming. I  
21 know we are way over time, so I won't ask any  
22 questions. Thank you.

23 MS. MORGAN: Thank you.

24 CHAIRMAN MAITLAND: Thank you very  
25 much.

1                   Next I would like to invite Tricia  
2 Wilt, Perry County resident.

3                   REPRESENTATIVE EGOLF: May I just  
4 mention before she starts that we just had Laura  
5 Morgan from the largest library system in the  
6 country. And some people say, well, they may have  
7 problems in Chicago, but it doesn't happen out here  
8 in interlands. This is an example that it can  
9 happen, it does happen here in Pennsylvania, and it  
10 can happen in the very smallest libraries. Thank  
11 you.

12                   MS. WILT: Three years ago my two  
13 young children and I made our weekly trip to the  
14 Newport Public Library. My children love to wonder  
15 around the library, browsing through books and  
16 looking at videos.

17                   My daughter asked me to help her find  
18 a Little House on the Prairie book in the children's  
19 section. I was searching for the book, and I  
20 happened to look up, and facing me was a computer  
21 screen with an outrageous sexually explicit picture.  
22 It was devastating for me to see such a thing, but  
23 my biggest concern at that moment were my children.

24                   I immediately informed the librarian,  
25 and she approached the man who was using the

1 computer and told him not to use it for that  
2 purpose. I was shocked at that time to find that  
3 the library did not use any type of filtering  
4 devices. I did not return to the library for an  
5 entire year because of that horrifying experience.

6 My children kept asking me why we  
7 could not go anymore and I felt sorry for them, but  
8 I could not bring myself to go back.

9 A year later, I finally decided to  
10 return. I picked up my daughter from school and  
11 when we arrived at the library, there were many  
12 junior high aged boys using the computers. Sure  
13 enough, they had a sexually explicit picture on the  
14 screen. I decided it was time to do something about  
15 this.

16 So my husband and I set up a meeting  
17 with the head librarian and told her of my  
18 experiences. We told her something needs to be done  
19 about this. And she said that the board decided not  
20 to make any changes regarding pornography on the  
21 Internet.

22 We then had a meeting with the  
23 chairman of the library board and expressed concern.  
24 They did agree to put a privacy screen on one  
25 computer and filter another computer but leaving the

1 rest as they were. These changes are simply not  
2 acceptable. We need to make the library safe for  
3 families.

4 I have spoke to many parents who were  
5 completely unaware and shocked that there are no  
6 filtering devices in the libraries. And, in fact,  
7 yesterday I ran into a lady I was talking about  
8 today, she said that just recently she and her  
9 daughter and her husband were at the library, the  
10 same library, and they saw a 10-to-12-year-old boy  
11 flipping through pages of pornography. And when  
12 they did tell the librarian, she said that there is  
13 simply no way that she can possibly monitor  
14 everybody's computer usage, which is true.

15 I just finished reading a book called  
16 Every Man's Battle by Arterburn and Stoeker. Inside  
17 the pages of this book, I read story after story  
18 about how pornography completely destroyed the  
19 lives, the families, the jobs, relationships and  
20 marriages of every day men.

21 We simply cannot risk reading a story  
22 about one of our precious children who came addicted  
23 to pornography, especially in a place where parents  
24 assume would and should be a safe place to allow  
25 their teenagers to go after school to study.

1           When I was about 13, a man exposed  
2 himself to me in a department store. When this  
3 happened, I felt so dirty and violated. And, once  
4 again, in a library of all places I have been  
5 victimized by being subject to view something very  
6 repulsive without my consent.

7           I think we would all agree that what  
8 that man did to me when I was 13 was totally  
9 unacceptable, and that type of act would not be  
10 tolerated. Then how can anyone say that what took  
11 place in the library that day while children were  
12 present is something to be tolerated.

13           Libraries must make every effort to  
14 assure that when a child, a teen or an adult enters  
15 their facility, they will not unwittingly be exposed  
16 to pornography.

17           CHAIRMAN MAITLAND: Thank very much  
18 for your testimony.

19           Are there any questions?  
20 Representative Josephs.

21           REPRESENTATIVE JOSEPHS: Just to say  
22 thank you. Because I think your testimony was  
23 probably not so easy for you to give, and I  
24 appreciate it.

25           MS. WILT: You're welcome.

1                   CHAIRMAN MAITLAND: Thank you very  
2 much.

3                   Next I invite Mr. Robert Frieden,  
4 Professor of Telecommunications at the Pennsylvania  
5 State University. Professor.

6                   MR. FRIEDEN: Thank you for according  
7 me this opportunity to testify on House Bill 10, the  
8 Child Internet Protection Act.

9                   I serve at Professor of  
10 Telecommunications at Penn State University where I  
11 teach courses on communications and Internet law,  
12 economics and policy. However, this testimony in no  
13 way represents an official position of Penn State  
14 University, nor do I appear before this Task Force  
15 as a representative of the university.

16                   I appreciate the invitation to examine  
17 House Bill 10 and to provide the Task Force with  
18 some insights on the strengths and weaknesses of the  
19 bill and, additionally, as to whether in my opinion  
20 it will pass muster with a review in court.

21                   I have some experience in issues  
22 presented by the bill, having written several  
23 scholarly articles on Internet legal and regulatory  
24 issues. And additionally, I devised and taught an  
25 Internet law course at the Dickinson School of Law.

1     Additionally, I am a member of several law bars,  
2     including the Commonwealth of Pennsylvania and the  
3     Supreme Court of the United States.

4             In a nutshell, while I do not agree  
5     with the libertarian notion that government has  
6     business whatsoever interfering with the Internet, I  
7     am, however, leery of government-mandated access  
8     restrictions. The bill responds to a legitimate and  
9     compelling need for legislative protection in an  
10    Internet-based environment, like that majority  
11    applies to obscenity and material unsuitable for  
12    children in the so-called bricks and mortar world.

13            But if the legislation is to pass  
14    muster with review in courts, it must narrowly  
15    tailor Internet access restrictions and avoid  
16    interfering with the lawful rights of adults to  
17    access material that would be inappropriate for  
18    children.

19            I have some reservations about the  
20    need for mandatory software filtering, the  
21    effectiveness of this technology, and whether a  
22    reviewing court would uphold the installation of  
23    filters, even when adults access the Internet at  
24    public schools and public libraries.

25            I believe it would assist the Task

1 Force if I identify two potential areas in the bill  
2 that present some potential risk of litigation.

3 First, while no Pennsylvania cases  
4 specifically address the permissible scope of  
5 restricted Internet access in public schools and  
6 public libraries, a body of cases elsewhere suggest  
7 that courts will closely scrutinize the extent to  
8 which some restrictions designed to safeguard impose  
9 burdens and limitations on adults.

10 A so-called harmful to minors standard  
11 applied to any Internet user, adult or child as the  
12 bill requires, has the potential to be construed as  
13 overbroad, overinclusive and vague.

14 Second, reliance on software filtering  
15 has the very real potential for being both  
16 overinclusive and underinclusive. And by that I  
17 mean the software may filter out permissible sites  
18 dealing with public health, and also underinclusive  
19 in that it might let things slip through.

20 I am not keen on deferring to the  
21 judgment of software engineers as to what kind of  
22 worldwide web site might prove harmful to children.  
23 Because commercial software vendors typically do not  
24 disclose the type and nature of content filtering,  
25 users have little, if any, sense how these programs

1 work and their effectiveness at blocking only  
2 harmful or improper content. Indeed, I wonder if my  
3 testimony here might be blocked by the less  
4 sophisticated filtering software.

5 And I should add that these very types  
6 of software indeed are still in use. I readily  
7 acknowledge that some of the more sophisticated  
8 software as represented in testimony previously  
9 might not present such a problem. But prior  
10 versions, less sophisticated versions, I submit  
11 might indeed block out this testimony, because words  
12 sexuality and pornography appear, as do XXX in a  
13 row, a reference to the Roman numerals used to  
14 represent the 30th professional football  
15 championship game, commonly referred to as Super  
16 Bowl XXX.

17 Here are the main points of the  
18 written testimony that I've presented. The Internet  
19 reflects the best and worst aspects of society. On  
20 the positive side, it provides extraordinary  
21 opportunities to access news, information, data and  
22 entertainment. It certainly makes my job as an  
23 academic, as a sometimes practicing attorney,  
24 effective even in rural Pennsylvania.

25 But on the negative side, it has the

1 potential to threaten the welfare of children, to  
2 violate privacy interest and to facilitate criminal  
3 and harmful conduct. Having just said those two  
4 things, I hope you appreciate the ambivalence I have  
5 in presenting this testimony because I'm terribly  
6 torn.

7           Using the Internet as a medium for  
8 communications and commerce does not by itself  
9 change the nature of the transaction. I agree with  
10 that which was presented previously in the sense  
11 that if a transaction were to trigger administrative  
12 scrutiny in the physical world, the so-called bricks  
13 and mortar world, then an Internet mediated  
14 transaction would trigger the need for similar  
15 scrutiny.

16           So going to instances of pornography  
17 in the library, I think that if we had a physical  
18 manifestation of that pornography in a library, some  
19 policy applicable to that kind of content, would  
20 limit, if not restrict, access or prohibit such  
21 access. I submit that those are legitimate time,  
22 place and manner restrictions and it doesn't  
23 interfere with the First Amendment.

24           Additionally, the Legislature has a  
25 legitimate and compelling interest in safeguarding

1 children and has legislative safeguards applicable  
2 to transactions in the physical world. For example,  
3 prohibited access to alcohol until age 21. If the  
4 Legislature can limit transactions in the physical  
5 world, so too can it enact laws to safeguard  
6 children in the virtual world of cyberspace, when  
7 the Internet provides a medium for communications  
8 and commerce.

9           However -- and there always is a  
10 however here -- legislation designed to safeguard  
11 children in either the physical or the Internet  
12 mediated world must not be vague and must be  
13 narrowly tailored to achieve a compelling State  
14 interest. Careful drafting is necessary to insure  
15 that legislation does not impede the equally  
16 legitimate interest of adults to engage in lawful  
17 conduct that would be inappropriate for children.

18           On the matter of the scope of the  
19 First Amendment protection, few would dispute that a  
20 child's rights can deviate from an adult's,  
21 particularly when the child is located in a public  
22 school or a public library. On the other hand,  
23 adults have a qualified right to access nonobscene  
24 content. Accordingly, time, place and manner  
25 restrictions and even prohibitions lawfully placed

1 on children regarding such content must not  
2 excessively burden the legitimate right of adults to  
3 access nonobscene material available via the  
4 Internet.

5           Legislation designed to safeguard  
6 children regarding their access to the Internet must  
7 be narrowly drawn to past judicial scrutiny. A  
8 harmful to minors standards runs the risk of being  
9 overbroad and vague, particularly in light of the  
10 reliance of the software-based filtering, which can  
11 be overinclusive and underinclusive.

12           While House Bill 10 would guard  
13 against children's access to harmful content like  
14 pornography, the use of software filtering has the  
15 potential to block nonobscene worldwide web sites  
16 addressing such issues as human sexuality and public  
17 health. I think there have been a number of  
18 anecdotes represented previously by other people  
19 before you.

20           An absolute prohibition on public  
21 library access to material harmful to minors might  
22 be construed by a court as excessively burdening  
23 adult access to nonobscene material, which while  
24 inappropriate and possibly harmful to minors,  
25 nevertheless is constitutionally permissible and

1 protected by the First Amendment.

2 I might mention going to the issue of  
3 pornography, I don't think that, particularly in a  
4 public forum like a library, there is an absolute  
5 First Amendment right to access pornography even by  
6 adults and certainly nonfiltering library policy,  
7 acceptable-use policy, that could occur and exist in  
8 a physical world would apply to that sort of  
9 situation, although that does make librarians in a  
10 sense police. I can recognize that that is an  
11 additional burden not initially in their job  
12 description.

13 Lastly by way of suggestion, I believe  
14 the Committee might consider expanding the  
15 unblocking provision contained in Section 9 to  
16 provide generally for unfiltered Internet access by  
17 adults. This would maintain the vital safeguards  
18 appropriate for children, while eliminating the  
19 application of software filtering to computers  
20 accessed by adults.

21 I would be pleased to answer any  
22 questions by the Committee. Thank you very much.

23 Are there any questions?

24 Representative Josephs.

25 REPRESENTATIVE JOSEPHS: Thank you,

1 Mr. Chairman.

2 I kind of lost sight of the fact that  
3 we are not really here talking about illegal child  
4 pornography or illegal obscenity, because they're  
5 illegal. Now so we are talking about something that  
6 is a different standard, that is not illegal in this  
7 country, but we think it is inappropriate.

8 Going back to some of the anecdotes  
9 that were cited by the people who are selling these  
10 filters, or perhaps only one of them, in response to  
11 my question of sites that keep opening up and you  
12 can't escape from them, that shut your machine down  
13 if such a thing is possible. If those images or  
14 words, spoken or written, met the test for what is  
15 illegal material in this country, would the library  
16 operator have no other recourse than installing  
17 filters? Is there not some criminal prosecution  
18 that could be asked from the local authorities?

19 MR. FRIEDEN: That's a very good  
20 question. I think, first of all, we should  
21 acknowledge that libraries have use policies,  
22 acceptable-use policies, that predate the Internet.  
23 And when there is content, be it written or in a  
24 magazine or what not, that is inappropriate for  
25 children or should be partitioned and available only

1 to adults, we've had those kinds of policies. I'm  
2 not suggesting we burn books.

3 But, on the other hand, software  
4 filters can be analogized to burning books in the  
5 sense that it's just extinguished. It's taken right  
6 off the list.

7 REPRESENTATIVE JOSEPHS: If for some  
8 reason a branch has repeated problems with -- let's  
9 go to any kind of obscene, somebody standing in  
10 front of the school and handing out something which  
11 meets the standard for being illegal obscenity or  
12 child pornography, somebody calls the local law  
13 enforcement folks, and that person gets removed from  
14 that site, I assume.

15 MR. FRIEDEN: You bet.

16 REPRESENTATIVE JOSEPHS: If the same  
17 kind of thing comes into the school or public  
18 library through the Internet, don't we have the same  
19 recourse?

20 MR. FRIEDEN: Absolutely. We have, in  
21 a sense, a community-based standard for what  
22 constitutes indecency and obscenity. Indecency  
23 might be acceptable, obscenity isn't. But it's the  
24 community that decides.

25 If there's a web site based in Seattle

1 and it's viewed in Lancaster, the Lancaster standard  
2 applies. So in terms of the purveyor, they're  
3 running the risk of violating the community  
4 standard. Similarly, as to the Internet scholars  
5 and perpetual frequent users, I think a library  
6 policy in terms of a time, place and manner type  
7 restriction within the restrictions of the First  
8 Amendment kicks those people out. You play police.  
9 It is a job that maybe librarians didn't want to  
10 assume, didn't think they had to assume, but if  
11 somebody is a perpetual pornography viewer, out he  
12 or she goes from the library. It's as simple as  
13 that.

14 REPRESENTATIVE JOSEPHS: But if that  
15 person is viewing pornography which meets the  
16 standard -- I agree. And I also don't think that  
17 libraries should not have acceptable-use policies.  
18 I think they should. I agree. Families should have  
19 acceptable-use policies.

20 MR. FRIEDEN: I should mention that I  
21 do and I use filters at home.

22 REPRESENTATIVE JOSEPHS: My children  
23 do. I do not use filters at home which is why we  
24 have local control.

25 MR. FRIEDEN: Right.

1                   REPRESENTATIVE JOSEPHS:  But if  
2                   somebody is sitting in front of a screen and is  
3                   viewing something that meets the standard for  
4                   obscenity, don't you have a legal action not only  
5                   against the site -- and I don't want to say another  
6                   city -- in another remote place that people who have  
7                   published that site and keep updating it, and a  
8                   legal remedy perhaps against the person who is  
9                   sitting in -- aside from saying out of here?

10                   MR. FRIEDEN:  I'm very intrigued by  
11                   the brazenness or anecdotes of the brazenness of  
12                   users.  I consulted with two librarians in State  
13                   College where I live and the computers --  
14                   admittedly, it's a small library, but the computers  
15                   are approximate to the circulation desk, and you  
16                   have to be pretty brazen to try to access a site  
17                   like that.  That's the first point practically  
18                   speaking.

19                   The second point is that I think there  
20                   is a separate First Amendment protection in the  
21                   privacy of one's home as opposed to in a public  
22                   place.

23                   REPRESENTATIVE JOSEPHS:  I agree.

24                   MR. FRIEDEN:  And insofar as something  
25                   that might be past the obscenity standard in the

1 privacy of one's home, it might not meet a community  
2 standard in a public place.

3 REPRESENTATIVE JOSEPHS: I have no  
4 problem with that at all. Thank you. Thank you,  
5 Mr. Chairman.

6 CHAIRMAN MAITLAND: Representative  
7 Egolf.

8 REPRESENTATIVE EGOLF: Just quickly I  
9 guess, are you saying then that the libraries take  
10 care of these problems of the illegal obscenity and  
11 child pornography and there's not a problem then or  
12 what?

13 MR. FRIEDEN: No, sir, I didn't mean  
14 to imply that. I think that harm can be done, and I  
15 readily acknowledge that sometimes you can't undo  
16 the harm. But, on the other hand, the perpetrators  
17 of the harm can be brought to justice, either the  
18 purveyors of the material or the recipients,  
19 procurers of the materials. And that's where a  
20 legal standard and acceptable-use policy applies.

21 REPRESENTATIVE EGOLF: But, see, I  
22 think the problem that we brought out today is that  
23 they are not doing that in the libraries. In other  
24 words, it's coming in and you are saying they could  
25 be charged with illegal activity of accessing and so

1 on. But they're not doing it. Our idea is that the  
2 filters would do that, plus along with their other  
3 policies. Maybe I just misunderstood what you were  
4 saying.

5 MR. FRIEDEN: I mean, just on the  
6 issue of filtering. I recognize this is a terrible  
7 difficult issues and I'm ambivalent. And I've  
8 already acknowledged that I use filtering at home.  
9 And I use very aggressive active monitoring of  
10 content by my two children. But I just don't feel  
11 comfortable relying on software engineers and on  
12 algorithms and on programs, the likes of which and  
13 the effectiveness of which I don't really fully  
14 understand.

15 I readily acknowledge that maybe my  
16 testimony on the XXX might not be blocked by some,  
17 but I also assert that it would be blocked by  
18 others.

19 REPRESENTATIVE EGOLF: Thank you.

20 CHAIRMAN MAITLAND: Professor, I have  
21 a question. Would you say then -- suppose I'm at  
22 the library and I get into something that's Seattle  
23 based that I think is illegal, that I could go down  
24 to the Magistrate's Office and file a private  
25 criminal complaint against that Seattle-based

1 company?

2 MR. FRIEDEN: There is a law case. It  
3 wasn't Seattle. Actually it was in the San  
4 Francisco area where content was downloaded in  
5 Memphis, and a Memphis standard applied. It was a  
6 bulletin board. And the purveyors, the Thomases,  
7 the purveyors of that site, and it was something  
8 that you had -- commercial site you had to use a  
9 credit card but was accessible, were brought to  
10 Memphis and prosecuted under Memphis community  
11 standards. And they're doing two to ten in the big  
12 house.

13 CHAIRMAN MAITLAND: That's  
14 interesting. Thank you very much, Professor, for  
15 your testimony.

16 MR. FRIEDEN: Thank you.

17 CHAIRMAN MAITLAND: Next we'll invite  
18 another Professor of Law, Gary Gilden, from  
19 Dickinson of Law. Professor Gilden.

20 MR. GILDEN: Thank you for having me.  
21 I am a professor at the Dickinson School of Law.  
22 But as with the previous speaker, I am not here to  
23 express the views of the institution. In fact, I'm  
24 here on behalf of the Civil Liberties Union of  
25 Pennsylvania to give our take on House Bill 10.

1           I would also note parenthetically I am  
2 a parent of three children who have been raised in  
3 Pennsylvania in public schools using the public  
4 libraries as well.

5           Both personally and on behalf of the  
6 ACLU, we log the goal of House Bill 10 certainly as  
7 constitutionally permissible to protect children  
8 from exposure to obscenity, to protect children from  
9 exposure to pornography.

10           The problem with House Bill 10,  
11 however, is that the means used to achieve this end  
12 is too blunt, because it sensors information that is  
13 neither obscene nor pornographic and thereby  
14 violates the free speech provisions of the First  
15 Amendment to the United States Constitution and the  
16 Pennsylvania Constitution.

17           And the problem arises because of the  
18 filtering that this legislation mandates for public  
19 schools and for public libraries. Now, certainly in  
20 a technologically perfect world, there would be no  
21 constitutional problem. If there were filters that  
22 screened only pornography, only obscenity, we would  
23 not be here talking about this particular  
24 constitutional issue.

25           However, we don't live in that

1     technologically perfect world. I know at the outset  
2     of the hearing, Representative Josephs asked about  
3     if there was any sort of neutral expert who would be  
4     here testifying. I don't think we've heard from  
5     that neutral expert yet.

6                     I will only refer the Committee to one  
7     source, and that is the report of the Federal  
8     Commission on the on-line Protection Act, which was  
9     a commission designed to ferret out what was the  
10    state of the technology in consultation with the  
11    Federal analog to this particular act.

12                    I took a look at the report of that  
13    commission on its web site which is cited in my  
14    material. That commission concluded that because of  
15    its potential to be overinclusive in blocking  
16    content; that is, because it blocked things that  
17    were not obscene and were not pornographic, that the  
18    filters used in libraries and schools raised  
19    significant concerns about First Amendment values.

20                    Again, this was not a Civil Liberties  
21    Organization. That was a neutral commission  
22    designed to ferret out what is the state of that  
23    particular technology.

24                    Some of the overinclusiveness came  
25    because of blocking by word. We've heard a lot of

1 debate as to whether somehow the technology has  
2 changed so some of that blocking is not happening.

3 But interestingly enough, what we  
4 haven't heard anything about is the more serious  
5 issue of whether the editors of this software and  
6 these filters were making content choice based upon  
7 their very own value judgment.

8 In fact, there's incidents of blocking  
9 of sites hosted by the American Family Association,  
10 the Religious Society of Friends, the on-line  
11 magazine the Magical Spectacle, not because of three  
12 Xs appearing or the words S-E-X appearing  
13 consecutively, but because the editors of the  
14 software or the filtering systems had made some  
15 personal value judgments as to whether this was  
16 appropriate material to pass through to children.

17 Now, we have heard some denigration of  
18 the Consumer Report as being inadequate in its  
19 sampling. But let me just talk about one other  
20 observation about the Consumer Report that was not  
21 contested. And that is that the Consumer Reports  
22 found more troubling, and I quote, that the  
23 designers of filters blocked legitimate sites based  
24 upon moral or political value adjustments.

25 And, again, there were citations to

1 examples of the Citizens Committee For The Right To  
2 Keep And Bear Arms site being blocked, the Southern  
3 Poverty Law Center sit being blocked, which is a  
4 nonprofit antidiscrimination law center. And I  
5 believe as Representative Josephs dialogue with one  
6 of the previous speakers brought out, they are not  
7 willing for proprietary reasons to disclose what is  
8 the system by which they are making the -- not the  
9 screening function by three Xs or context, but what  
10 are the individual choices that these private  
11 companies are making as to what they are going to  
12 preclude.

13           Given this situation, we have to take  
14 a look at the constitutional analysis. I suppose  
15 the first question that ought to be asked is, well,  
16 what does the First Amendment have to do with  
17 Internet access? Isn't the First Amendment about  
18 free speech? And here we are not talking about  
19 children speaking or library patrons speaking.

20           But it is well settled that the First  
21 Amendment of the United States Constitution is not  
22 merely a guarantee of the right to speak, but also  
23 the freedom to receive speech, because the First  
24 Amendment is about the free exchange of  
25 communication in the marketplace of ideas. And I've

1 cited in the written report the cases that's stand  
2 for that particular proposition.

3 What House Bill 10 proposes to do  
4 through its mandated filtering is to regulate the  
5 content of speech that is going to be received. And  
6 when government proposes to regulate the content of  
7 speech that is to be received, it triggers from the  
8 court's perspective the highest level of scrutiny by  
9 the courts and, in turn, the highest burden of proof  
10 on government.

11 And that same standard is going to  
12 apply to this legislation, one, because of the  
13 nature of the forum, the library; and, secondly,  
14 because of the nature of the medium it proposes to  
15 restrict, the Internet.

16 I've cited in my written testimony the  
17 clear case law that sets forth that public libraries  
18 are what the law calls limited public fora for  
19 expressive activities. And because they are what is  
20 known as a limited public forum -- again, one of  
21 these cases comes out of the United States Court of  
22 Appeals of the Third Circuit which controls in  
23 Pennsylvania -- that we are going to trigger what  
24 I'll explain in a moment as strict scrutiny, because  
25 government is proposing to limit information that is

1 going to be transmitted in this limited public  
2 forum.

3           Interestingly enough, the same standard  
4 is triggered by virtue of the fact that this  
5 legislation tries to regulate the Internet. The  
6 United States Supreme Court in Reno versus American  
7 Civil Liberties Union had a chance in the first real  
8 take from the Supreme Court on this new medium, to  
9 label this, as Justice Stevens noted, comparable  
10 from the reader's viewpoint to a vast library,  
11 including millions of readily available and indexed  
12 publications.

13           So just as House Bill 10 attempts to  
14 regulate libraries directly, its regulation and  
15 censorship of the Internet is a regulation of what  
16 the Supreme Court has declared to be a library. And  
17 in those circumstances -- and this is not advocacy,  
18 this is simply reporting the law -- the strict  
19 scrutiny would three questions to be asked and  
20 answered.

21           First, the Government would have to  
22 prove that it has a compelling interest. And,  
23 secondly, the government would have to prove that  
24 this particular restriction is necessary to further  
25 those compelling interests. And -- and I stress the

1 word and these are not or -- the government would  
2 have to prove that this legislation was narrowly  
3 tailored to achieve that compelling interest.

4 And this standard comes right out of  
5 the United States Supreme Court case law. This is  
6 nothing that is unclear or in dispute. And what I  
7 want to do is to simply walk you through this  
8 particular test.

9 I know one of the previous speakers  
10 talked about that this was a theoretic discussion  
11 about whether there should be free access to  
12 information and free access to pornography. For  
13 present purposes, that debate is really not at  
14 issue, because we can accept that the government's  
15 interest here is compelling. That as to the first  
16 prong of that test, I think the case law would well  
17 support that protecting minors from obscenity,  
18 protecting minors from child pornography, would  
19 satisfy the compelling interest test. But that,  
20 again, is only one of three things the government  
21 would have to prove.

22 The second thing that the government  
23 would have to prove to sustain the constitutionality  
24 of this legislation is that this filtering is  
25 necessary to satisfy that interest. I don't want to

1 tarry to much on that particular prong, because I  
2 think the answer lies readily under the less  
3 restrictive alternatives prong.

4 But let me just note parenthetically  
5 there has been one case, one Federal case, on the  
6 constitutionality of filtering. It's the Main  
7 Stream Louden case out of the Louden County Library,  
8 which is where the library board itself chose to  
9 mandate filtering. And patrons of that library  
10 brought a lawsuit claiming that the library's  
11 decision to mandate filtering not legislatively  
12 imposed violated the First Amendment right of  
13 patrons of access to information.

14 And the District Court in Virginia  
15 applied this three-prong test -- and even before  
16 getting to what I want to be the thrust of my  
17 remarks, although less restrictive alternatives --  
18 but the court found that the government had not  
19 satisfied the necessity prong.

20 Under the precedence, it's not enough  
21 to hypothesize that perhaps there could be a problem  
22 for which censorship would provide some benefit,  
23 that because you are trying to restrict fundamental  
24 speech, you'd have to prove actually that there was  
25 a problem here to be addressed.

1           And interestingly enough, the evidence  
2 turned out to be as offered in that case that there  
3 was a single complaint in Virginia. And the  
4 Defendant's expert who is named David Burt -- I'm  
5 not sure whether it is the same Mr. Burt who  
6 testified earlier today -- only came up with three  
7 isolated incidents across the country where this was  
8 a problem in libraries.

9           We certainly have heard some testimony  
10 here today that this does not present a problem.  
11 Again, I don't think for purposes of my testimony we  
12 need to resolve whether or not there's a problem or  
13 not. It's enough to say that were this tested in  
14 the courts from a constitutional perspective. If  
15 there was not an establishment that there was, in  
16 fact, a problem, that alone would topple the  
17 legislation on constitutional grounds.

18           But even if we assume that the court  
19 accepted a compelling interest, and even if we  
20 assume that there was some necessity, that is there  
21 was a problem there to be addressed, the government  
22 would still have to prove that this was the least  
23 restrictive alternative to satisfying that  
24 particular problem.

25           And I've cited in the materials, the

1 case law whereby the courts have applied that least  
2 restrictive alternative test, because when you're  
3 trying to regulate constitutionally protected speech  
4 -- and that's where the overinclusiveness problem  
5 comes in -- we know that these filters do not screen  
6 only pornography and obscenity, but whether because  
7 of the screening technology or the value choices,  
8 they are screening constitutionally protected  
9 speech, it's going to be the burden on government to  
10 proof that this is the least restrictive means of  
11 doing this, not whether we'd prefer that this is  
12 done this way, not whether we like this as opposed  
13 to other options which has been much of the  
14 testimony that's been here today.

15           There's been great debate as to  
16 whether people prefer system A to system B, but we  
17 are going to have to establish that this is the  
18 least restrictive alternative.

19           I think the testimony of people far  
20 more knowledgeable than I over the course of this  
21 morning and early afternoon have talked about  
22 alternatives. Again, in the one case where this has  
23 been litigated, the Loudon Court found that, in  
24 fact, there were less restrictive alternatives to  
25 achieve these ends.

1           And, therefore, it is our position  
2 that applying the plain precedence that House Bill  
3 10 by mandating filtering, where there are other  
4 less restrictive alternatives, is unconstitutional.

5           Let me just add a practical note or  
6 maybe a prudential note as to why this Committee and  
7 the Legislature should not be quick to rush into  
8 this particular methodology or this particular  
9 legislation. We know that on December 21st of 2000,  
10 President Clinton signed into law the Children's  
11 Internet Protection Act.

12           One of our previous speakers, I think,  
13 from the School Board Association talked about how  
14 that mandated filtering and that the Pennsylvania  
15 schools were in the process of doing that. What  
16 hasn't been noted is that a lawsuit was filed by a  
17 coalition of libraries, adult library patrons,  
18 juvenile library patrons and web publishers,  
19 alleging that the requirement of filtering in that  
20 Federal Act was unconstitutional.

21           That case by my most recent  
22 information is expected to be set for trial in  
23 December of 2001. I think that that case raises the  
24 very constitutional questions that I've been talking  
25 about here today. And, certainly, it would seem

1 that before the Legislature would waste its time and  
2 taxpayer dollars and maybe school district dollars  
3 and library dollars that have been talked about of  
4 pushing forward, that perhaps we should be a little  
5 more careful. Because if that's declared  
6 unconstitutional in the interim, this particular  
7 legislation will not stand.

8 One last constitutional -- I don't  
9 know if it's a side issue. I characterize it as a  
10 side issue. But in the legislation, there's this  
11 procedure by which a patron who believes that the  
12 filtering system has prevented her from accessing  
13 constitutionally permissible information and the  
14 library has said, well, no, we don't agree with  
15 that, that there's an appeal procedure that requires  
16 the library patron to file a lawsuit in the Court of  
17 Common Pleas. And somehow the court is to hold a  
18 hearing within three business days and issue its  
19 final decree within 24 hours.

20 There are both policy and  
21 constitutional problems with that. From a policy  
22 perspective, the proposal places a cost on a library  
23 patron to procure counsel or else figure out the  
24 legal system. It places a cost on the library to  
25 defend this, and it places a cost on an already

1     overburdened judicial system to somehow hold  
2     hearings within three days and within another 24  
3     hours issue a decision every time a library patron  
4     complains about filtering.

5                     But equally importantly, this  
6     particular notion of the patron seeking review is  
7     contrary to well established legal precedent that  
8     requires the entity doing the censoring to initiate  
9     a judicial proceeding if it wishes to sustain that  
10    censoring, and we cited to the Freeman case.

11                    House Bill 10 in short in our view is  
12    subject to constitutional attack, but let me just  
13    add one last policy statement that really hasn't  
14    been discussed. And that is, not only is this  
15    legislation in our view deficient on constitutional  
16    grounds, but it's our opinion that the net effect is  
17    going to be widening the digital divide between the  
18    haves and the have nots.

19                    Those people with Internet access in  
20    the home are going to be able to access the  
21    information that is not constitutionally proscribed,  
22    but which is nonetheless filtered by the public  
23    system.

24                    Those people who don't have Internet  
25    access at home, the have nots in society, persons of

1 low income, minorities, less educated, children of  
2 single parent households, rural areas, may not have  
3 reliable Internet access, are going to be  
4 disadvantaged in the marketplace of ideas and in  
5 their schools by their inability to do so.

6 Thank you for giving us the  
7 opportunity to testify, and I'd be happy to attempt  
8 to answer any questions.

9 CHAIRMAN MAITLAND: Thank you,  
10 Professor. Representative Josephs.

11 REPRESENTATIVE JOSEPHS: Thank you.  
12 Thank you, Professor.

13 I just wondered I guess whether you  
14 agree with the previous speaker that if  
15 constitutionally impermissible speech shows up in a  
16 library via the Internet that there are other legal  
17 remedies to take care of that situation.

18 MR. GILDEN: Some but not all that you  
19 might imagine. The Federal Congress tried to do  
20 this with the Communication Decency Act, where they  
21 try to have a blanket proscription that said if you  
22 actually as a provider put on the Internet  
23 information that would be obscene, that you would be  
24 responsible.

25 The United States Supreme Court struck

1 that down applying the very standards I talked about  
2 here today, because given the local standards for  
3 obscenity, you would be actually punishing people  
4 for information that may not be obscene in community  
5 A, but community B.

6 Problem No. 2, with the definition of  
7 those terms, it was overbroad and, just as this  
8 legislation does, has the potential to punish  
9 constitutionally protected information. So trying  
10 to go attack this through the vehicle of reaching  
11 any Internet provider I think has already been  
12 declared to be unconstitutional. Whether there's  
13 some lesser, more targeted means that might be  
14 available, we'd have to explore those on an  
15 individual basis.

16 But certainly the United States  
17 Supreme Court has already struck down the blanket  
18 approach of saying that if I'm sitting in Seattle,  
19 I'm potentially liable in Carlisle, Pennsylvania  
20 under some circumstances.

21 But other more targeted means may well  
22 be viable. And, again, I think the courts  
23 ultimately are going to apply the least restrictive  
24 alternative test and the sort of sweeping things,  
25 such as this legislation, are not going to be

1       accepted as the solution.

2                   REPRESENTATIVE JOSEPHS: Thank you. I  
3 kind of thought that was the case. Thank you.

4                   CHAIRMAN MAITLAND: Representative  
5 Egolf.

6                   REPRESENTATIVE EGOLF: Thank you for  
7 the testimony. I just have one comment. You  
8 mentioned about the locking filter to block the  
9 different sites based on moral or political value  
10 judgments. This bill isn't mandating a particular  
11 filter. So, in fact, it will be a list of filters  
12 that meet the objectives of this. And I would think  
13 that those types of filters that would be chosen by  
14 the Attorney General's Office and the Secretary of  
15 Education will be looking for filters to do what the  
16 department can do.

17                   So the market is going to I think play  
18 in there and they're going to give a list of the  
19 filters that do the job and not include the other  
20 ones. So I think -- I don't know if you are sort of  
21 implying, I think, there that they might be required  
22 to use a filter based on moral or political value  
23 judgments. And I don't know that that's --

24                   MR. GILDEN: Again, our position and  
25 everything that's been published on this suggests

1 that there is not a filter that restricts itself to  
2 the constitutionally proscribed categories.

3 And there's an interesting question as  
4 to whether the Attorney General or Secretary of  
5 Education will ever be able to find out from the  
6 filtering companies precisely what it is they are  
7 filtering, because they want to protect their  
8 product. And if I somehow produce to you, here's  
9 what we're filtering, there's nothing that prevents  
10 Company B from saying, well, great, you did all that  
11 research and start-up, I'll just piggyback on it and  
12 adopt it.

13 So the experience has been that the  
14 companies are not going to tell you. And I think we  
15 saw this here today. They are willing to give you  
16 the categories that they're using, but not how those  
17 sites were arrived at.

18 REPRESENTATIVE EGOLF: I think I would  
19 disagree, because I think the company would want to  
20 sell their product. They are going to try to market  
21 it, so they are certainly going to tell what they  
22 can. Obviously, everybody has some proprietary  
23 things in their business, whatever it may be.

24 MR. GILDEN: With all due respect, all  
25 I can tell you is that the Federal Commission, with

1 the same motives as you did, disagreed with that  
2 conclusion based upon their investigation.

3 REPRESENTATIVE EGOLF: Thank you.

4 MR. GILDEN: And Consumer Reports,  
5 notwithstanding the debate about its sampling,  
6 reached the same conclusion after its inquiry and I  
7 can't tell you that I've done any independent  
8 research. I'm just trying to share with you what  
9 was requested earlier, is there any data from  
10 neutral providers on that. And that seems to be the  
11 state of the science and the state of the art.

12 CHAIRMAN MAITLAND: Professor, does it  
13 matter in your constitutional argument that over  
14 time a facility like a public library or school  
15 library can unblock sites through the software and  
16 block additional sites that maybe the software  
17 should have gotten but didn't? I mean, that is not  
18 as restrictive as never being able to go in and  
19 adjust one way or the other what the software does  
20 block.

21 MR. GILDEN: I guess the short answer  
22 is I'm not sure that's what this legislation  
23 accomplishes. I'm not sure the practical  
24 implementation of what you're theorizing does what  
25 you say it will. And, third, you then get a whole

1 new issue of the librarians now trying to apply  
2 standards of constitutionality, which cause all  
3 different problems. So, again, I think we can  
4 theorize a perfect world where we can do this. But  
5 the reality unfortunately is not there.

6 CHAIRMAN MAITLAND: Another question  
7 I have is clearly there is material out there that  
8 is constitutionally protected but might be offensive  
9 to people. And we heard from librarians and private  
10 citizens that they feel violated by viewing some of  
11 this constitutionally protected material in the  
12 public library.

13 And I have from the Internet,  
14 foxnews.com, a report that the Equal Employment  
15 Opportunity Commission in Minnesota has ruled that  
16 the city central library may be creating a hostile  
17 working environment for librarians by allowing  
18 patrons to download materials from the Internet  
19 without restriction.

20 So here, on the one hand, you have  
21 First Amendment right of an adult taxpayer to go  
22 into a library and access this information. Over on  
23 this hand, you have the violation of the right of  
24 the patrons and the employees in the facility not to  
25 be violated by being forced to view this material or

1 the behavior of the individuals viewing it.

2 So where is this clash going to be  
3 reconciled?

4 MR. GILDEN: I think that's a  
5 wonderful question. Actually, that was one of the  
6 issues that was before the District Court in Loudon.  
7 One of the government interests there was protecting  
8 against the hostile work environment. Apart from  
9 the fact that the court found there was no evidence  
10 of that, even if we assume that there was, they went  
11 on to say that there were less restrictive  
12 alternatives. And they cited to the privacy  
13 screens, which allowed the user to access the  
14 information, but the passerby and the librarian  
15 didn't have to do so.

16 Again, if you just follow the  
17 analysis, they said we don't have to censor the  
18 speech, because there are less restrictive ways  
19 where we could preserve the speech as well as  
20 preserve the rights of the patron in the library not  
21 to be subjected to this material.

22 And I think you've heard from the  
23 librarians about that. That's the way that plays  
24 out. It's not a matter of choosing one or the  
25 other, that you have to subject the librarian to the

1 hostile work environmental in order to preserve the  
2 First Amendment rights of the patrons.

3 And if they were no less restrictive  
4 alternatives, the Court might find that protecting  
5 the employee from that hostility would be a  
6 compelling interest that there was a problem and no  
7 alternatives. If that were true, that perhaps that  
8 legislation -- that restriction would be upheld.  
9 But the Court in Louden said there are other ways  
10 apart from censoring the speech that we don't have  
11 to sacrifice either individual's rights.

12 And that's how the Court will go about  
13 asking that question. Again, I defer to the  
14 librarians who testified who seemed to have offered  
15 some responses to that.

16 CHAIRMAN MAITLAND: Representative  
17 Josephs has another question.

18 REPRESENTATIVE JOSEPHS: Thank you.  
19 Not so much a question, but I've not only read the  
20 filtering companies filtering things on  
21 philosophical and political means, but they filter  
22 sites that tell you how to unblock filters. And I  
23 would be very interested, since we have  
24 representatives, I don't know, at least from one  
25 company, maybe two companies still here, to pick a

1 day in the recent past, because I know these things  
2 change every minute, and just send us a list of the  
3 sites that they block.

4 And any of their other members of the  
5 Internet Safety Committee who want to do that, I  
6 would like to see that happen. And I'll start the  
7 clock going now. It's 1:26 and it's the 7th of  
8 June. I think it's a proprietary interest. I think  
9 it's to be protected that way. And people act that  
10 way when they are in business. And from their point  
11 of view, they ought to, I think. Thank you.

12 CHAIRMAN MAITLAND: Representative  
13 Egolf.

14 REPRESENTATIVE EGOLF: I would like to  
15 now bring up another question to you. I'm not an  
16 attorney so see what your opinion would be on this.  
17 In adult bookstores, the Supreme Court I understand  
18 has upheld the zoning that they can't be near  
19 schools or in residential areas and so on because of  
20 the adverse secondary effects. Is that correct?

21 Why wouldn't that also stand up then  
22 in saying in a library, you said about least  
23 restrictive, if you put screens or have a separate  
24 room for adults to view pornography and so on over  
25 the Internet, why wouldn't that also cause adverse

1 secondary effects and couldn't that be restricted  
2 under the same law and decision that allows you to  
3 restrict adult bookstores in neighborhoods?

4 MR. GILDEN: I think the short answer  
5 is there's a difference in the standard that's  
6 applied when you're completely banning the speech  
7 versus regulating circumstances under which it may  
8 be accessed. In other words, there's a difference  
9 in reasonable time, place and manner restrictions  
10 which the previous speaker talked about that could  
11 be acceptable.

12 In other words, if you would say  
13 there's a limit to the amount of time at which you  
14 can be on the Internet period because that was a  
15 reasonable time, place and manner, as opposed to  
16 what we are saying here in House Bill 10, speech  
17 will not be permitted period, which is a regulation  
18 on the content basis.

19 So there may be different ways where  
20 you are not actually regulating based on content or  
21 proscribing material that would undergo a different  
22 constitutional analysis there. And a lot of  
23 limitations on adult bookstores are not on that were  
24 proscribing the existence of the bookstore or the  
25 conveying of that information. But the restrictions

1 are being restrictions, not censorship, are being  
2 approved under a reasonable time, place and manner  
3 approach.

4 REPRESENTATIVE EGOLF: Even in the  
5 library, we are not restricting them completely.  
6 Because you can tell the librarian that you have  
7 research to do and you can have it unblocked.

8 MR. GILDEN: Again, the way the Court  
9 has in Louden, and we suggest would, analyze this  
10 would be under a content-based regulation which  
11 triggers the higher standard.

12 REPRESENTATIVE EGOLF: I guess one  
13 comment. I don't expect an answer on this. But we  
14 have medications that have side effects. I know you  
15 made comments that there may not be perfectly  
16 effective ways of blocking and we know that.  
17 Nothing is perfect, nothing is 100 percent perfect.

18 But in the case of medications, for  
19 example, we have medications that may prevent you  
20 from dying from cancer, but there may be side  
21 effects. But we don't not use that medication  
22 because there's side effects. We go ahead and use  
23 it and we try to do something else to minimize those  
24 side effects.

25 It seems to me that this -- I'm just

1 making a comment. I think the same thing here.  
2 Maybe filters are not 100 percent perfect, but  
3 should we wait till they are and allow this disease,  
4 this disease of cancer, to invade.

5 MR. GILDEN: Unfortunately or  
6 fortunately, the differences here, you have the  
7 constitution on the other side of the balance and  
8 the most fundamental of constitutional rights, that  
9 of speech. And that's the approach the Court's  
10 going to take from it, not just from a policy  
11 perspective; gee, does this seem to be a good idea  
12 or not. When you're dealing with speech, the case  
13 law is abundantly clear that the most rigorous  
14 scrutiny is going to be applied. Thank you.

15 CHAIRMAN MAITLAND: Counsel. Wait,  
16 Professor, one more. Counsel Cherry has a question.

17 MR. GILDEN: He's just looking forward  
18 to asking a former professor questions.

19 MR. CHERRY: Professor Gilden, you had  
20 talked about strict scrutiny standards. What is the  
21 ACLU's view as a way that House Bill 10 could meet  
22 that standard; the time, place and manner  
23 restrictions could be narrowly drafted to meet that?

24 MR. GILDEN: I don't want to go too  
25 far along the lines and get yelled at by our

1 legislative director. I will tell you that  
2 acceptable-use policies without censorship perhaps  
3 might be a better way to go, but I simply would  
4 refer you to our legislative director, Mr. Frankel,  
5 for more expertise on alternatives. I was just  
6 asked to show why this wasn't the one. As you may  
7 be familiar with, it's a good way of evading the  
8 question.

9 CHAIRMAN MAITLAND: Thank you very  
10 much, Professor, for your testimony today.

11 And our final testifier today is  
12 Thomas Shaheen, Vice President for Policy,  
13 Pennsylvania Family Institute.

14 MR. SHAHEEN: Thank you, Chairman and  
15 Members of the Committee. I will try to be as brief  
16 as possible, knowing the day has gone long.

17 I am Tom Shaheen, Vice President of  
18 the Pennsylvania Family Institute. We are a  
19 nonprofit research and education organization,  
20 founded in 1989 and based in Harrisburg. At the  
21 Family Institute, we analyze policies and social  
22 trends that affect the most basic building block of  
23 our society, the family. We work to be a voice for  
24 those who are too seldom heard in the public policy  
25 debate, the voice of families and the voice of

1 parents. Our membership list is approaching 30,000  
2 families across Pennsylvania.

3 The Internet has revolutionized  
4 society, including how our children are educated.  
5 With its vast reach, the knowledge once contained in  
6 isolated distant locations is now accessible to  
7 millions of children at their local libraries,  
8 schools and home.

9 Unfortunately, the most violent,  
10 offensive and graphic forms of obscenity are also  
11 readily available, so are web sites that promote  
12 suicide and murder, bomb making and other material  
13 harmful to minors.

14 We support the passage of House Bill  
15 10 which would require Pennsylvania's public school  
16 libraries that provide Internet access to minors to  
17 employ filtering technology on those computers.  
18 The problem is real in just a few examples. On  
19 April 6th of this year -- and I heard reference to  
20 this by Ms. Morgan as well. On April 6th of this  
21 year, the Lancaster New Era newspaper reported the  
22 results of a three-day investigation, just three  
23 days, three-day investigation of the electronic  
24 history computer files at 12 local libraries  
25 throughout Lancaster County.

1           They found that pornographic web sites  
2 were viewed at 8 of the 12 libraries. For one  
3 example, at the Ephrata Public Library, the New Era  
4 found more than 70 X-rated web sites had been  
5 visited on a single day, ranging from Electrosmut  
6 to Dirty Sweet Teens and Sex Illustrated.

7           To quote the paper, strict policies  
8 and threats of having their computer privileges  
9 stripped are failing to stop a small number of  
10 library members from scouring the Internet for  
11 X-rated material.

12           The paper also reported that,  
13 "Librarians were not surprised at the findings and  
14 admitted they have a limited ability to prevent  
15 users from accessing pornographic web sites." I  
16 will add to that children and adults alike had  
17 access to these computers, and the libraries do not  
18 use filtering.

19           In March of this year, the  
20 Philadelphia Inquirer reported the experience of an  
21 11-year-old in a Monmouth, New Jersey library.  
22 Tyler Spader was surfing the Internet trying to find  
23 pictures of pro wrestlers. Instead, the boy found  
24 sex scenes. He quickly switched screens, but the  
25 pornographic image he stumbled on to was so

1 disturbing, it would, to quote his mother, pop back  
2 into his head for no apparent reason.

3 She said my son's mind was molested by  
4 cyber pornography in this library. This never  
5 should have happened, and she was speaking in  
6 support of State legislation in New Jersey to  
7 require libraries and schools to install filters.

8 A couple of years ago the York Daily  
9 Record reported the widespread problems that  
10 administrators in York County school districts were  
11 having with keeping students from viewing  
12 objectionable sites. Even policies telling students  
13 what is not appropriate use didn't seem to be  
14 enough. York City School Superintendent, Jack  
15 VanNewkirk, recommended Internet filtering because,  
16 "we have a whole lot of smut mongers out there."

17 Since then, York City and some other  
18 York County school districts and the nearby West  
19 Shore School District have installed sophisticated  
20 filtering systems.

21 The Philadelphia Daily News did a  
22 story on the dramatic rise in youth sex offense  
23 cases in Philadelphia's Family Court. The Joseph J.  
24 Peters Institute which runs a juvenile sex offender  
25 treatment program said, "Offenders typically come

1 from homes where violence and pornography are  
2 commonplace. Many have seen people engage in sex  
3 both at home and on the screen. Many are exposed to  
4 pornography at a young age.

5 Parents need help when they cannot be  
6 present. What are parents to do when a teacher  
7 cannot supervise all the children at their school or  
8 when librarians either cannot or will not monitor a  
9 child's Internet use. Placement of filtering  
10 technology on school library computers will ensure  
11 that parental rights to direct the child's  
12 upbringing are respected, when parents are not able  
13 to be present while their child is at the school or  
14 at the library.

15 Furthermore, it reinforces the  
16 teachings and values of the overwhelming majority of  
17 parents, as well as the public policies of both our  
18 State and Federal Government that found that the  
19 viewing of pornography is harmful to a child's  
20 development.

21 Surveys consistently show that a  
22 majority of parents strongly support Internet  
23 filtering at school. In a Safe Kids/Net Family news  
24 survey of parents and other care givers of on-line  
25 kids, 85 percent said they approve of filtering

1 legislation.

2 In a University of Pennsylvania  
3 Annenberg Center survey showed that 67 percent of  
4 parents with on-line access and 82 percent of  
5 parents without home Internet access are worried  
6 that their children will view sexually explicit  
7 images.

8 Filters assist public officials to  
9 enforce public policy. The placement of filters on  
10 school computers is an exercise of public school  
11 officials' duty to determine the educational  
12 suitability of all material in their schools.  
13 Similarly, public libraries have no obligation to  
14 provide unrestricted access to sexually explicit  
15 material via their tax-funded computers.

16 House Bill 10 is entirely consistent  
17 with the United States Supreme Court precedent and  
18 both National and State public policies.

19 Public schools are an environment  
20 within which access to pornography should be  
21 prohibited. There is no educational purpose for  
22 which public school students must access material  
23 harmful to minors or obscenity. Therefore, it is  
24 entirely appropriate that such material be blocked  
25 out on Internet accessible computers in public

1 schools.

2           And I'll add to that previous  
3 testimony by school librarians, constantly referred  
4 to the ability of the librarian or the duty of the  
5 librarian to choose what has an educational purpose  
6 and what is suitable. And that's exactly why this  
7 legislation is needed, because I think it is  
8 incumbent upon lawmakers in coordination with the  
9 funding they provide to also be able to determine  
10 that. And I think filtering is a tool that  
11 libraries and schools can use to do that.

12           My conclusion is that the Internet is  
13 a wonderful tool to modern era. And recognizing the  
14 educational revolution it has ushered in, parents  
15 are actively seeking to expose their children to the  
16 many benefits of the Internet. However, these same  
17 parents fear the dark side of the Internet and  
18 rightly so.

19           As the State helps introduce this  
20 technology to schools and libraries, children will  
21 be subjected to State-funded peep shows unless steps  
22 are taken to remove pornography from these  
23 computers. However, libraries and schools also play  
24 a pivotal role as the first line of defense in  
25 efforts to keep children away from this material. A

1 parent's diligent and watchful eye is useless once  
2 his or her child has entered the schoolyard, since  
3 parents cannot supervise the children while at  
4 school, nor is it always possible for parents to be  
5 present at libraries.

6           Library and school officials are in a  
7 position to use the latest technology to prevent  
8 children from accessing pornography while at school  
9 or in the library, whether through the Internet or,  
10 as they do now, through traditional print media.

11           For schools and libraries to refuse to  
12 bear this responsibility and use the tools at hand  
13 is an abdication of their role to assist patrons,  
14 and it can endanger the children they have pledged  
15 to teach and protect.

16           The implications of unblocked Internet  
17 access are particularly troublesome for those  
18 children who have Internet access only at their  
19 schools or local libraries. These children will  
20 learn to use the Internet away from the loving care  
21 of parents capable of training them to safely  
22 navigate around its dangers.

23           We have our strongest duty to assist  
24 these parents in their efforts to protect their  
25 children from harmful material. Otherwise, they

1 will be left with only one option, expressly  
2 prohibiting the children from using the Internet.  
3 Parents must be able to entrust school and library  
4 officials with the safety of their children.

5           House Bill 10 goes a long way toward  
6 this goal by providing parents with a tool that will  
7 assist them in their most important job, raising  
8 their children.

9           By respecting the desires of parents  
10 to prevent their minor children from accessing  
11 pornography, the General Assembly can provide much  
12 needed support to families in their battle against  
13 those who prey on children.

14           If I may just make brief references to  
15 so earlier testimony today -- I guess that's one of  
16 the advantages of going last -- Professor Frieden  
17 said that he was not comfortable with trusting  
18 filtering software or technology or those who do the  
19 surfing and decide which sites are blocked.

20           I can say as a parent of four  
21 children, as well as an advocate for families, as  
22 well as a Pennsylvania taxpayer, I'm not comfortable  
23 trusting either librarians or school officials who  
24 would oppose this bill or oppose filtering and not  
25 even voluntarily employ filtering, I don't trust

1 those officials to keep the Internet safe at my  
2 school or my library.

3 And just a personal note. My son was  
4 in 6th grade this year, and he was sent home a  
5 permission slip to use the computer lab. And along  
6 with that was the appropriate-use policy,  
7 Internet-use policy.

8 I was very delighted to see that my  
9 school district uses a filtered server. And I  
10 called the IT coordinator at my district and asked  
11 him, because I knew we were supporting this  
12 legislation. He didn't give me his support for the  
13 legislation. I didn't ask for it. What I asked for  
14 was did he have problems with it, how long did they  
15 have it, what did he think about the cost, how does  
16 he get it.

17 And the answers I got were he gets it  
18 through the IU, which provides it for those  
19 districts that want it. It's Lancaster/Lebanon IU,  
20 I believe it's 13, and it's Annville/Cleona School  
21 District.

22 He said the cost in his words were not  
23 much different than if it was unfiltered access.  
24 They have not had a problem with it in the school.  
25 And I know that earlier this year, a classmate of my

1 son who is also in the computer lab with him one  
2 evening tried to send my son some pornography over  
3 the Internet from home.

4 And that's just one example to me or  
5 kind of prompted me to think, well, if this same  
6 child -- and it could have been my child doing it  
7 too. If this same child would have had unfettered  
8 access in the computer lab, he probably wouldn't  
9 have even waited until he got home. He would have  
10 been downloading it or transmitting it from the  
11 school computer, which I think is totally off  
12 limits. So I was pleased that they have it.

13 And another added note is that at home  
14 we have purchased a filter -- we went with an ISP  
15 that provides filtering. It's a local one, D & E  
16 Jazz, I think in Lancaster and York and Lebanon  
17 Counties. And I was very pleased with the level of  
18 sophistication, the choices that parents can make.  
19 There are maybe six or seven choices of levels of  
20 filtering that we can use.

21 And when I looked into it further, I  
22 discovered that it was provided by N2H2, which is  
23 the company David Burt works for. That's not why I  
24 purchased it. It was purchased at the ISP. But in  
25 looking into it further, I found out that my school

1 district also uses N2H2. So when David Burt speaks,  
2 I listen, because I know his filtering software  
3 works, just from personal experience.

4 Thank you for the opportunity to  
5 present this testimony.

6 CHAIRMAN MAITLAND: Thank you, Mr.  
7 Shaheen. Any questions? Representative Egolf.

8 REPRESENTATIVE EGOLF: Thank you very  
9 much. I think we've had some great testimony today,  
10 and I think you've done a very good job of  
11 summarizing why we have the problem and we need to  
12 do something and why such legislation is needed. So  
13 thank you very much for your testimony.

14 CHAIRMAN MAITLAND: Speaking to the  
15 sponsor and the cosponsor, so you are preaching to  
16 the choir.

17 I want to thank you for your time and  
18 thank everyone for taking part in today's hearing.  
19 And I'll declare the hearing adjourned.

President  
Pennsylvania Library Association**

**before the Committee on the Judiciary  
House of Representatives  
General Assembly of Pennsylvania  
June 7, 2001**

## **LOCAL DECISION-MAKING FOR PUBLIC USE OF THE INTERNET IN LIBRARIES**

### ***Introduction***

Mr. Chairman and Members of the House Judiciary Committee:

Thank you for giving the Pennsylvania Library Association (PaLA) the opportunity to present testimony in this hearing today. My name is Jack Sulzer and I am honored to serve this year as the president of the Pennsylvania Library Association. I am a native Pennsylvanian and currently serve as the Associate Dean for the Campus College Libraries at Penn State University. I should also note that I have also served as a library trustee on the board at the Schlow Memorial Library in State College, and served two terms as its president.

PaLA is pleased to be represented at today's hearing by Rich Bowra, Director of the Dauphin County Library System in Harrisburg, and Cynthia Richey, Director of the Mount Lebanon Public Library in Allegheny County. They will offer testimony and answer any questions from the perspective of library professionals in the field concerning Internet use in public libraries and possible implications of HB 10, The Child Internet Protection Act.

As president of PaLA, I wanted to take this opportunity to offer some context and background for this discussion. As you may know, PaLA is Pennsylvania's oldest and largest association of librarians, staff, and trustees. This year the Association's more than 1700 personal and institutional members are celebrating the centennial anniversary of PaLA. We represent Pennsylvania's public, academic, and special libraries that serve government, business, and other institutions. PaLA's mission is to promote the highest quality in library and information services in order to enhance learning and ensure public access to information. That is why we have adopted as our centennial theme: PaLA @ 100: Enhancing Libraries/Enriching Lives.

***Libraries Enhance Information Literacy Skills***

The education and nurturing of children has always been and continues to be a paramount mission of Pennsylvania's libraries. Libraries and librarians are partners with parents, teachers, and local officials in working to help their residents become information literate. Librarians teach adults and children to access, evaluate, and wisely use all information resources, including the Internet.

The concerns underlying HB 10 are important, and we commend the Committee for taking a serious look at children's Internet safety. As librarians, we share the sponsors' concerns that children's experience on the Internet be safe, educational, and rewarding. As new information technologies proliferate, it is critical that we balance the extraordinary value they bring to communications and learning with responsible use and careful guidance. Nevertheless, we are very concerned about the negative impact that a State mandate to filter all Internet resources will have on local decision-making and community control of the educational process in our public and school libraries.

Public and school libraries care a great deal about the Internet issue and continue to work diligently on ways to ensure a positive Internet experience. Librarians are on the frontline in providing the training, support, and guidance that children, parents and all library users need to become responsible Internet users. In addition to the issue of "inappropriate sites," libraries are concerned about the accuracy of information on the Internet.

Libraries conduct Internet training and safety classes, customized safe Internet terminals for children's use, and links to accurate and reliable sources for children and adults. At the Free Library of Philadelphia, for example, they offer a Bits & Bytes program. It includes an after school Computer Science Club for 4<sup>th</sup>-6<sup>th</sup> graders that explores science software and science Web sites. Teenage Tech Team Assistants provide tutoring and computer assistance. The library also offers workshops to introduce technology to parents, teachers and child care providers, as well as other special programs.

This is just one example of the many, many educational programs libraries use to help develop informed Internet users and to tender responsible use of library computers and Internet information resources. Programs such as this are planned, developed and implemented through the professional expertise of librarians and educators working with

their library and school boards to meet the needs that they recognize in their communities and schools. HB 10 intercedes on this traditional, locally controlled educational process by assuming that a “one size fits all” statewide mandate will protect all of our children in all of our communities regardless of the educational tools that are deemed appropriate by local decision-makers.

The local library is one of the few institutions providing the general public with Internet instruction. The greatest tool that librarians have to work with in protecting and educating our children is forged from the ethics of our profession, responsible application of our education and experience, and the commitment, support, and direction of our local library boards. How we provide training, support, and guidance varies depending on the community we serve, and the effectiveness of technologies like filtering software in protecting children is determined by its use in combination with educational programs that serve library users at the community level, well-enforced library policies, and parental involvement. State legislation that overrides local policy-making and education undermines the entire system that has developed our public libraries from a notion by Ben Franklin into an organization of public learning institutions unmatched by any in the world.

### ***Librarians Deplore Computer Misuse***

Pennsylvania librarians deplore any misuse of library computers to access or display obscene materials found on the Internet. No local library policy in Pennsylvania supports access to or display of obscene materials in the library, either in print or on computers, and librarians vigorously enforce their local policies. The process of developing acceptable computer use policies has been important for communities. It can help parents

and other caregivers to become more aware of the issues and options they have to control or limit their own children's access to through home computers. This is the only way, in my mind, that communities can have public libraries that are safe places for us all, adults and children alike.

Until the advent of the Internet, libraries proactively chose the materials that were purchased to place in the collection. The Internet "opens the door" to materials and information far beyond what the library would choose to purchase. While there are numerous filtering programs on the market, research has demonstrated that filters have many limitations. Legitimate sites are often blocked, while the blocking of x-rated sites is not comprehensive. This creates a great challenge when looking towards a solid solution. Given that filters fall short of their intended purpose, filtering often gives parents a false sense of security. While many people will opt toward filtering despite these limitations, it is important to know that inappropriate sites will continue to be accessed, although in a lesser number. Conversely, patrons needing to access appropriate sites will often be blocked from those sites due to the blocking software.

Also, let us not forget that there are many, many positive aspects of the Internet that have vastly improved library service and access to information. For example, the statewide POWER LIBRARY program offers citizens Internet access to more than 2,000 periodical titles (with an infinite number of full-text articles), encyclopedias, AP photo archives, and a variety of additional reference databases. Libraries are continually adding numerous information databases accessible via the net, and our increase in access has been exponential. In short, one must not lose sight of nor access to all of the positive things on the Internet.

While no one approach to Internet safety will satisfy everyone in the community, we believe it is possible to work with the community to fashion a “bottom up” approach that reflects community values, addresses core concerns and provides useful solutions. Not surprisingly, local decision-making processes vary significantly and the solutions are extremely diverse. But what they have in common is involvement of the community, understanding of local norms and values, knowledge of practices that take into account the information needs of children and teens, and a general good faith desire to find a solution that respects the diverse perspectives in the community and strikes a balance between what is bad on the Internet and the multitudinous good things that it has to offer.

The fact that Pennsylvania’s locally adopted policies have resulted in infrequent occurrences of abuse or illegal use of the Internet demonstrates that:

- 1) Pennsylvania’s librarians and trustees are performing their jobs conscientiously;
- 2) Libraries are responsive to local community needs; and
- 3) Technology and management techniques are working effectively. These techniques may include: providing Internet training for children, adults and families; creating lists of recommended web sites for different age groups; placing computers in public view and adjacent to staff areas for ease of supervision and assistance; requiring parental permission for Internet access; and selective use of filtering and site blocking software.

### ***Effective Responses to Legal and Community Issues***

Under Pennsylvania law, every public library in the Commonwealth has adopted an Internet use policy that prohibits use of its computers by minors to access materials that contain or make reference to explicit sexual materials as defined in the law. Additionally,

under current Pennsylvania law, library policies (including access to the Internet) are the responsibility of local community library boards and professionally trained librarians. Obscene images and child pornography are defined in and are illegal under federal and state law and, as such, are not made available in public libraries in print or online. We do not buy it for our book and magazine collections, and we have collection standards, policies, and procedures for keeping it off the shelves, off the computers and away from children.

Librarians understand that increased access to the Internet in schools and libraries has heightened concern about children's ability to access inappropriate and illegal material. Those concerns are serious, but they are not new. At least they are not new among librarians. We had similar concerns well before the days of computers in libraries and the Internet's open door. Communities have been developing many different and effective ways to guide children's access to information for many years that are informed by professional research and judgment and local norms and values. The State should not interfere with local control and decision making by mandating a single approach to a multifaceted problem.

As librarians, working with our library boards, we continue to carry out our jobs expertly and professionally with dedication and diligence in the "information age." We, and our trustees, have always set policies to determine the materials selected for our collections and establish standards for use of the library. Computer technology has not changed this. Local library boards are made up of dedicated Pennsylvania citizens who unselfishly volunteer their time, talent, energy, and sound judgment. These individuals are in the best position to set local library policies for the communities they serve. Together, librarians and trustees continue to set the policies and make the rules that are appropriate

for our communities and the libraries we run. In the age of the World Wide Web, our public libraries remain safe and inviting environments for children and adults alike.

Libraries are currently handling access in a variety of ways, ranging from no filtering to fully filtered terminals. In some cases, terminals in the children's area are filtered or "customized for children," while terminals in the adult areas are not. In many libraries, parental permission is required to allow minors to use the Internet. While these are but a few examples, there are a large number of approaches that have been taken. There have been cases where libraries that have chosen to filter all terminals have been successfully sued (i.e. Loudon County, Virginia) by citizens demanding open access.

Regardless of any individual library's position on filtering the Internet, experience has demonstrated that interest groups such as the American Library Association and the ACLU will be quick to mount a legal challenge on Internet filtering. Both organizations have recently launched a legal challenge to federal legislation mandating filtering in libraries receiving E-Rate telecommunications discounts, and federal library funding under the Library Services and Technology Act and Title III of the Elementary and Secondary Education Act. The question then becomes: "What is the best approach to protect children from unsavory Internet sites in a fashion that will withstand legal challenge?" It may be wise to see how federal legislation would relate to state legislation, whether or not differences would cause any particular conflicts or problems, and whether any legislation linking such a mandate to government funding will withstand constitutional challenges in the courts.

Finally, it makes little sense that, in order to receive State funds, school and public libraries should be required to spend their valuable resources, mostly local tax dollars, to

**purchase software filters that cannot do what this bill wants them to do. That is the purview of law enforcement. The law enforcement community doesn't rely on a piece of faulty technology to perform their challenging duties. They rely on the sound judgment of men and women who have been well trained and who believe in serving the needs of their local communities.**

**Therefore, the Pennsylvania Library Association strongly supports the authority of Pennsylvania's local library boards to determine the appropriate measures for educating and responding to the needs of citizens in their communities. Further, the Pennsylvania Library Association opposes action by the state or federal government to override the respected tradition of responsible and effective decision-making at the local level under the threat of losing federal or state funds. For your further reference, at the end of my statement I am providing a copy of the Statement of Principle in support of Local Decision Making adopted this past April by the Pennsylvania Library Association's Board of Directors.**

**I thank you for this opportunity to share the perspective of the Pennsylvania Library Association. Please know that we stand ready to work with the Committee to achieve the goal which we all share: Internet access for all Pennsylvanians, that is educationally sound, enriching, and comprehensive, and provided in a manner, especially for our children, that is as safe as humanly possible.**

## **Pennsylvania Library Association Statement of Principle — April 2001**

### ***LOCAL DECISION-MAKING FOR PUBLIC USE OF THE INTERNET IN LIBRARIES***

The Pennsylvania Library Association asserts that:

- Libraries and librarians are partners with parents, teachers, and local officials in working to help their residents become information literate. Librarians teach adults and children to access, evaluate, and wisely use all information resources, including the Internet.
- The education and nurturing of children has always been and continues to be a paramount mission at Pennsylvania's libraries.
- Pennsylvania's librarians deplore any misuse of library computers to access or display obscene materials found on the Internet.
- No local library policy in Pennsylvania supports access to or display of obscene materials in the library, either in print or on computers. Librarians conscientiously enforce their local policies.
- Under Pennsylvania law, every public library in Pennsylvania has adopted an Internet use policy that prohibits use of its computers by minors to access materials that contain or make reference to explicit sexual materials as defined in the law.
- Under Pennsylvania law, library policies (including access to the Internet) are the responsibility of local community library boards and professionally trained librarians.
- Local library boards are made up of dedicated Pennsylvania citizens who unselfishly volunteer their time, talent, energy, and sound judgment. These individuals are in the best position to set local library policies for the communities they serve.
- The fact that Pennsylvania's locally adopted policies have resulted in infrequent occurrences of abuse or illegal use of the Internet demonstrates that:
  - 1) Pennsylvania's librarians and trustees are performing their jobs conscientiously;
  - 2) Libraries are responsive to local community needs; and
  - 3) Technology and management techniques are working effectively. These techniques may include: providing Internet training for children, adults and families; creating lists of recommended web sites for all ages; placing computers in public view and adjacent to staff areas for ease of supervision and assistance; requiring parental permission for Internet access; and selective use of filtering or site blocking software.

Therefore, the Pennsylvania Library Association strongly supports the authority of Pennsylvania's local library boards to determine the appropriate measures for educating and responding to the needs of citizens in their communities. Further, the Pennsylvania Library Association opposes action by the state or federal government to override the respected tradition of responsible and effective decision-making at the local level.

## **Mandating Internet Filtering at Public Libraries Undermines Freedom**

*The Pennsylvania Alliance for Democracy believes that creating productive, responsible citizens requires that people be taught to think critically, to understand and respect the views of those different from them, to appreciate a broad spectrum of ideas and to respond to controversial ideas and different views with understanding and open talk, rather than suppression and censorship. The Pennsylvania Alliance for Democracy will work to ensure that Pennsylvania schools and libraries remain intellectually free and uncensored in any medium.*

*Adopted May 1997*

The Pennsylvania Alliance for Democracy opposes laws requiring that public libraries receiving state or federal funding install internet filtering software that prevents patrons from accessing constitutionally protected material. The federal Public Law 106-554 and proposed state legislation (H 10, S 583) are each titled Child Internet Protection Act, although it should be noted that the provisions restrict access of adults as well as children.

- ▶ Democracy requires that citizens have access to information. Public libraries are an important source of information, including access to the internet, especially for low income patrons.
- ▶ Libraries are local institutions, and have policies that have been developed with community input and local control.
- ▶ Internet filters often fail to block the type of material they are intended to filter out. At the same time, they may also filter information that is not objectionable and is constitutionally protected.
- ▶ As citizens we cherish our freedom of speech and of the press, as well as our right to privacy. Only the courts can determine what material does not deserve constitutional protection.

---

**Democracy requires that citizens have access to information. Public libraries are an important source of information, including access to the internet, especially for low income patrons.**

**Free public libraries facilitate the dissemination of a wide range of information on many diverse topics. Libraries make it possible for citizens to be well informed, even if they do not have substantial economic resources. A well-informed citizenry is essential for meaningful participation in democracy. Whether it is voting, writing to lawmakers, interacting with administrators of public agencies, knowing how to access services, calculating the proper amount of taxes, seeking justice in the**

courts, or running for public office, civic activity requires information. For many citizens, the best place to get that information is the library, and access to the internet at our libraries has become an essential source of information.

**Libraries are local institutions, and have policies that have been developed with community input and local control.**

Libraries are responsible to their communities; most of their funding comes from their communities and they are governed by local community trustees. As members of the community they serve, library trustees are sensitive to local standards and aware of concerns about children accessing inappropriate material. At the same time, they must be true to their mission of making information accessible. The vast majority of libraries have adopted standards about the availability of sensitive material, whether on the internet or in other media. These standards help parents keep their children safe, while not restricting the rights of adults to access constitutionally protected material.

Libraries are places to find information. They serve diverse populations with varying needs and standards. The growth of the internet has expanded the amount of information available. Its effects are no less revolutionary than development of the printing press. Locally controlled public libraries are the best places for all of us to learn how to best use all of the information that is available.

Although most library funding comes from their local communities, state and federal funding are important to provide library users with access to electronic communication. Federal e-rate funding and Library Services and Technology Act grants are designed to assist libraries with their use of internet technology. Rather than require that libraries purchase ineffective filtering technology, we should respect the decisions of local libraries regarding both internet use policies and how to use their resources.

**Internet filters often fail to block the type of material they are intended to filter out. At the same time, they may also filter information that is not objectionable and is constitutionally protected.**

All internet filters sometimes fail to block the type of material they are intended to filter out, while at the same time, they may also filter information that is not objectionable. Although filters may be useful at home, in the context of a public library which serves a wide range of patrons, mandatory filtering is not workable.

Filters block large amounts of material that could not by any reasonable standard be considered obscene, indecent or harmful to minors. Blocked material can include art and literature, medical information, sexual information and advice, or discourse on controversial political subjects. According to the American Library Association, during its research into filters, the Chicago Public Library found that its own site was blocked. In testimony regarding a successful challenge to the mandatory internet filtering policy that had been adopted for Loudoun County, Virginia public libraries, the blocking software at issue was found to block out a vast amount of constitutionally

protected information including websites relating to the Society of Friends, the American Association of University Women, the Heritage Foundation, the Yale graduate school of biology, sex education, and even beanie babies.

In addition to being blocked from accessing specific sites, library patrons would be hampered in their searches for information. Filtering software does not provide a list of addresses being blocked and software companies consider their list of filtered material to be proprietary information, so library patrons won't know what they are not getting unless they know a particular site exists.

A filter may be useful at home, where parents are dealing directly with the software producer, and can review what material is being blocked or allowed for access by their own children. Still, parents need to be involved with their children's internet use, whether at home or in the library. Filtering isn't the same as critical thinking; it doesn't help children develop good decision-making ability. Children need to learn how to deal with the rapidly increasing amount of information available from many sources.

**As citizens we cherish our freedom of speech and of the press, as well as our right to privacy. Only the courts can determine what material does not deserve constitutional protection.**

A federal law and two state bills threaten public financial support for libraries if they do not install commercially produced filtering devices which are purported to restrict access to objectionable material over the internet. Libraries that do not comply with these mandates are at risk of losing federal e-rate funding and Library Services and Technology Act grants, which are designed to improve access to technology in libraries as well as state funding. All terminals, not just those in children's areas, would have to be filtered. Patrons who wish to view a blocked site must make a request of the librarian, who would have to respond to the request in two days. If then denied, the patron has the right to appeal to the court of common pleas.

For many personal and sensitive reasons, library patrons may be interested in information about gender identity, sexual abuse or medical conditions. To access relevant information, the patron will have to disclose their interest to a librarian. The required disclosure itself may keep people from learning helpful information about serious personal concerns.

There is no clear standard for the librarian to use in determining whether a patron shall have access to a blocked site. Librarians are not medical professionals or counselors, and are not bound by any standards of confidentiality. It is inappropriate to require patrons to provide librarian with their reasons for seeking information, nor is it reasonable to expect librarians to judge the propriety of their requests.

**Mandating filters at public libraries threatens our freedom of speech and our right to privacy. Public libraries provide access to a broad range of information for diverse individuals, giving them the tools to be active and informed citizens of a democracy. Public libraries must not be forced to choose between funding and censorship.**
