COMMONWEALTH OF PENNSYLVANIA
HOUSE OF REPRESENTATIVES
HOUSE INSURANCE COMMITTEE

STATE CAPITOL
ROOM 140
HARRISBURG, PENNSYLVANIA

TUESDAY, APRIL 15, 2008
10:00 A.M.

PUBLIC HEARING ON
HOUSE BILL 1849

BEFORE:

- HONORABLE ANTHONY M. DELUCA, CHAIRMAN
- HONORABLE SCOTT W. BOYD
- HONORABLE RON BUXTON
- HONORABLE JOHN R. EVANS
- HONORABLE ROBERT W. GODSHALL
- HONORABLE BOB MENSCH
- HONORABLE STEVEN R. NICKOL
- HONORABLE RICK TAYLOR

- - -

CHAIRMAN DELUCA: Good morning, ladies and gentlemen. I -- it's ten after. We apologize. We were looking to see our first testifier, who got tied up on the expressway coming in from Philadelphia today, so I -- he said he'll be a little late, but we're going to start the meeting since it's ten after.

Before I start, I'd like to have my colleagues introduce themselves from my left.

REPRESENTATIVE BUXTON: Ron Buxton, Dauphin County.

REPRESENTATIVE GODSHALL: Bob Godshall, Montgomery County.

REPRESENTATIVE NICKOL: Steven Nickol, York and Adams.

REPRESENTATIVE MENSCH: Bob Mensch, Montgomery County.

CHAIRMAN DELUCA: I'm Representative Tony DeLuca, the Chairman from Allegheny County.

REPRESENTATIVE EVANS: John Evans from Erie and Crawford Counties.

1 REPRESENTATIVE BOYD: Scott Boyd from
2 Lancaster County.

3 CHAIRMAN DELUCA: Okay. And as I
4 said this morning, I want to thank everyone
5 for coming out today to -- for these
6 hearings. The Insurance Committee is going to
7 be having a lot of hearings on different
8 pieces of legislation to -- to educate not
9 only ourselves but to educate the public.

10 And today, this morning, we have
11 House Bill 1849 sponsored by Representative
12 Mark Cohen dealing with the coverage for
13 telehealth care services.

14 Telehealth is defined in the bill as
15 a remote interaction between a health care
16 professional and a patient through the use of
17 video cameras and transmission on a computer
18 or other devices that deliver health
19 information concerning the patients to a
20 health care professional.

21 As technology evolves, the practice
22 of medicine must advance along with it. It is
23 incumbent upon us to investigate and consider
24 these technologies -- technologies and
25 advances and how they can benefit our

1 constituents.

2 The telehealth benefits as envisioned
3 in the legislation would have to be
4 appropriate for the patient and the use of
5 these tools would have to result in lowering
6 health care costs. This would appear to be
7 a -- a win/win situation for the patient and
8 certainly for the insurance companies.

9 The use of this new technology is
10 designed to reduce the traditional necessity
11 of patients going to the doctors' offices for
12 health care monitoring.

13 Patients can be provided with
14 information on how to self-manage their health
15 concerns. It would appear that the use of
16 telehealth medicine would be more convenient
17 for both the providers and the patients. It
18 also seems connecting the patients with health
19 care through these devices would reduce the
20 demands for health care services and save the
21 patients time and money going for the doctors'
22 visits.

23 I understand that telehealth is paid
24 for in at least five states -- Louisiana,
25 Kentucky -- California, Oklahoma, Texas and

1 Kentucky. Although it is permitted in
2 Pennsylvania, it is not often reimbursable
3 expenses by the insurance companies.

4 I hope this hearing will enlighten
5 the committee as to the efficacy of the use of
6 telehealth care, and we will be able to
7 determine whether or not it makes sense in
8 this state.

9 At first glance, it appears using
10 such technology may, in fact, be a good idea,
11 but I need to hear more about it and this
12 committee needs to be -- hear more about it as
13 to how it actually is used and to learn if
14 it's a safe and reliable alternative to
15 physically seeing one's physician.

16 Again, I would like to welcome all of
17 you to our hearing today, especially those of
18 you who have -- who will be testifying. I
19 look forward to hearing your thoughts on this
20 legislation so that we can educate the
21 committee and educate the members here.

22 Before I start, I want to
23 apologize -- not apologize but I want to relay
24 the fact that the chairman, my good friend
25 Representative Micozzie, unfortunately

1 couldn't be here today because he had
2 something in his district. It's election
3 time, and unfortunately he had something to do
4 in his district and had a couple meetings
5 there and he couldn't get out. So he just
6 wanted to relay that to the members and relay
7 it to the audience.

8 So without further ado, we'll call
9 our first -- or the second testifier, Andrew
10 Watson. He's an M.D. with the University of
11 Pittsburgh Medical Center. Welcome him.

12 DR. WATSON: Chairman DeLuca and
13 other distinguished members of the House
14 Insurance Committee, I want to thank you for
15 giving us the opportunity to come here and
16 speak about House Bill 1849 on behalf of
17 UPMC.

18 At UPMC our mission is to provide
19 high-quality and cost-effective health care
20 for our patients, and we believe, and firmly
21 believe, that removing barriers for
22 telemedicine will help us to accomplish this
23 goal.

24 Just a bit about why I'm here. I'm
25 an actively practicing laparoscopic surgeon.

1 In my practice I'm actually a fourth
2 generation surgeon in Pittsburgh. My
3 great-grandfather, grandfather, great uncle
4 and father were all surgeons in Pittsburgh.
5 And when I started my training, what I
6 particularly do benefits from technology.

7 When I trained, I was trained in open
8 surgery. These days we do laparoscopic
9 surgery. And if you've heard of laparoscopic
10 cholecystectomy, which is minimal access
11 techniques for taking out your gallbladder,
12 it's incredible the effect it has on patients
13 every day.

14 This is now standard of care for this
15 country. If you were to go to somebody's
16 office and they wanted to take out your
17 gallbladder through a large incision, that
18 would probably scare you away from them.

19 Colon surgery is what I do. I can
20 take out someone's colon, and I say that
21 humbly, through a incision about an inch and a
22 half long, two inches. The patients are out
23 of bed that afternoon, go home in several
24 days. It's incredible. They have less
25 problems with wound healing, hernias, faster

1 return to work, and less pain.

2 Every day that I live with my
3 practice, I'm looking at the benefits of
4 technology, what it's done for health care and
5 patients and every day I appreciate it more
6 and more. It's -- it's with this background
7 that I became interested in telemedicine,
8 looking at how technology will benefit
9 patients.

10 I'm here on behalf of Lawrence
11 Wechsler, who is the head of the UPMC Center
12 for Telehealth, and I'm an associate director
13 as well, as well as our Physician Services
14 Division.

15 The -- our view of telemedicine and
16 telehealth is it's a way of connecting
17 patients and physicians, as well as diagnostic
18 testing, when all those pieces of information
19 and parties may be physically separate.

20 Patients can be in the south side,
21 the physicians can be, for us, in the city of
22 Pittsburgh itself, and the information could
23 be from Erie, it could be from somewhere else,
24 where that patient may have been transferred
25 from, and we believe it's telemedicine's way

1 of looking at patients and seeing patients and
2 evaluating through these very disparate
3 sites.

4 The -- it's incredible the revolution
5 of technology that we've seen. These days
6 patients have to travel to specialists in the
7 centers of care. We've come to know health
8 care as being these large academic centers of
9 excellence. Patients have to drive hours,
10 families have to take time off work to drive,
11 and there's the costs associated with this as
12 well.

13 And we believe that telemedicine is a
14 way of actually reversing that process.

15 The technology has changed
16 enormously. I mean these days we have cell
17 phones that are as commonplace as cars, this
18 is broad-band connectivity, and we think
19 telemedicine is a way to turn this around so
20 that we can go back to the patients.

21 Patients don't necessarily want to
22 come to the hospital just to have a wound
23 checked or to have the heart listened to. We
24 can do this just as effectively and safely
25 through telemedicine.

1 I had some problems believing this --
2 I'll be very honest with you -- up-front, but
3 I went down to Texas and heard an electronic
4 stethoscope and I watched them examine a
5 patient 200 miles away.

6 And having been in medicine and
7 medical school since 1993, so about 15 years
8 into this, I'd never heard a patient's breath
9 sounds so clearly as I did through a digital
10 stethoscope and I'd never heard heart tones
11 that clearly and it was incredible the
12 effectiveness of being able to examine these
13 patients remotely.

14 In many areas of Pennsylvania, as you
15 well know, we have one of the country's
16 largest rural populations with two very large
17 cities on either end of the state. We have
18 one of the sixth largest, I think, populations
19 in the country right now.

20 It's very challenging to recruit
21 surgeons and other specialists to
22 Pennsylvania, as we know. So, therefore,
23 patients are having to drive farther and
24 farther to see the specialist.

25 And it's our position that we believe

1 that telemedicine is a way of providing high
2 quality, as well as cost-effective, health
3 care to these patients. We can take the
4 health care back to the patients.

5 We had a tremendous grass roots
6 appeal at UPMC for telehealth. We had a
7 number of physicians come forth expressing
8 interest in telemedicine or telehealth, both
9 of those terms.

10 We had folks, ophthalmology,
11 cardiology, radiology, wound healing, all come
12 forth, as well as stroke in particular, saying
13 that they wanted to look at ways of sort of
14 centralizing telemedicine for UPMC.

15 And we, therefore, completed the UPMC
16 Center for Telehealth, and we currently have
17 91 members. We have 31 divisions that it
18 encompasses and we have committees looking at
19 technology, outpatient care, looking at
20 business plans, as well as ways to implement
21 telemedicine to make it effective.

22 UPMC itself is one of the nation's
23 largest integrated health care systems, as you
24 know. We have about 48,000 employees, 20
25 hospitals, about 4.5 million outpatient visits

1 a year.

2 So we think that we've got an
3 excellent delivery model for telemedicine as
4 well. If I can give you some examples,
5 telestroke is one of the most striking
6 examples that I've personally seen of this.
7 I'll give you an example of it. It happens
8 quite frequently.

9 Imagine that if you have a stroke and
10 you're out by UPMC Northwest. It's about an
11 hour and a half drive down to
12 UPMC Presbyterian. To treat a stroke, you
13 need to have a clot-busting drug called tPA.

14 And what's critical about tPA, to
15 give this clot-busting drug, it has to be
16 given by and large by a trained specialist.
17 Those specialists are not always immediately
18 available at some of the other hospitals
19 outside of the large tertiary hospitals.

20 And so to give -- make the call to
21 give the clot-busting drug, the patient only
22 has a very narrow window. If you go beyond
23 that window, the patient can't get it and you
24 lose the benefits of it.

25 And what we've learned, if somebody

1 comes in with a stroke and goes to the
2 emergency room, and instead of having to drive
3 an hour and a half to Pittsburgh, or get in a
4 helicopter, and the helicopter may not be able
5 to fly because of the weather, we can now turn
6 on the telemedicine devices, someone can see
7 the patient, interact with the patient, talk
8 to the staff, examine the patient, and then
9 make the decision to give the clot-busting
10 drug, the tPA.

11 And the results actually are fairly
12 spectacular. It's not a panacea, but there
13 are a number of cases where patients'
14 neurologic symptoms can resolve right there in
15 the emergency room.

16 And the impact of this is
17 tremendous. Because if you go on to complete
18 a stroke, so to say, you can end up in rehab.
19 You could not be able to return to work. You
20 could end up in a prolonged hospitalization
21 and have all the associated complications and
22 all the procedures that may go along with
23 that.

24 But by having a trained specialist
25 available at any time, no matter where you

1 are, to be able to make the decision to give
2 you the clot-busting drug is tremendous.

3 We have 14 hospitals enrolled with us
4 now. We've treated 165 patients currently
5 with the tPA, and the interesting thing about
6 that is our rate of treatment with tPA is
7 about 25 percent.

8 So a quarter of the patients that
9 come in are candidates for tPA and they're
10 getting it. And what's interesting is the
11 national average for giving tPA is three
12 percent. So we've seen a 20-fold or 20
13 percent increase in giving tPA where it's
14 indicated.

15 And on a national level this has been
16 shown to give tremendous cost savings. I'll
17 mention that just a little bit later on.

18 One of the other programs that we're
19 also looking at is telepsychiatry. There's a
20 enormous dearth of psychiatrists in the state
21 of Pennsylvania as well.

22 We currently have a program that's
23 being developed through our UPMC health plan
24 looking at a pilot program to deliver
25 psychiatric care to adolescents and young

1 adults through the use of telemedicine.

2 The kids actually love this. If you
3 think about the way folks interact these days
4 with cell phones, video games or televisions,
5 they actually feel more secure looking into
6 the camera and talking to the television
7 screens, if you can believe it.

8 And I think it was surprising for us
9 to hear that as well.

10 But this is a way of reaching out to
11 patients who are -- can be a hundred miles
12 away through the use of telemedicine to give
13 them meaningful psychiatric care where
14 otherwise it may not have been available.

15 The impact of that on these kids, as
16 well as the communities and families that
17 support them, is tremendous.

18 And the third example of something
19 that we do currently at UPMC is wound care.
20 Currently there are not many wound care
21 specialists in the state of Pennsylvania.
22 We're fortunate to have Dr. David Steed, who's
23 a wound care specialist on staff in
24 Pittsburgh, and he has the ability to look at
25 folks that might have chronic, non-healing

1 lower extremity wounds. For folks that have
2 diabetes or heart failure or venous
3 insufficiency, a lot of times, it's very hard
4 for these people to drive or travel an hour to
5 an hour and a half to have their wound
6 evaluated.

7 And what we've been able to do at
8 UPMC is have specialized nurses go in there
9 with cameras to take pictures of the wounds.

10 When you look at the wound, those
11 pictures can be sent back to Dr. Steed, who
12 might be 50 or 100 miles away. He can
13 evaluate the wound. He can determine the
14 treatment and prescribe the treatment and then
15 follow the wound through remote technologies.

16 And what he's finding right now --
17 and these results are unpublished, but we're
18 looking at this also with the UPMC health
19 plan -- is that the rate of healing for wounds
20 is much faster and the time of open wounds is
21 actually decreasing.

22 One of the issues around
23 telemedicine, we talk about the patient care,
24 which we believe we can accomplish. We think
25 it's effective. But the cost effectiveness of

1 telemedicine is an issue for all of us and the
2 cost of health care is an issue for all of
3 us.

4 There was a landmark study released.
5 It's in the papers that we provided you
6 folks. It was released this November by the
7 Center for Information Technology Leadership,
8 and it's a report entitled The Value of
9 Provider-to-Provider Telehealth Technologies.

10 This was a collaborative venture by
11 AT&T and through a nonprofit venture in Boston
12 looking at the impact of telemedicine on this
13 country.

14 I should say the background for this
15 report was the University of Texas medical
16 branch in Texas. They've done half a million
17 telemedicine consults. They do 70,000
18 telemedicine consults a year within the
19 state. They have 25 rooms going
20 simultaneously all day long looking at
21 telemedicine, and it's incredibly effective.
22 And this is what the basis of this report came
23 from.

24 But this report is looking at nursing
25 homes, emergency rooms, especially prison

1 care, and what they're finding right now is
2 they're projecting that there could be an
3 annual savings of about \$4.4 billion in health
4 care revenue due to the use of telemedicine.

5 The Journal of Stroke -- getting back
6 to strokes just for a second -- talking about
7 giving the clot-busting drugs, they're looking
8 at the savings of giving tPA. So if you give
9 the clot-busting drug and the patient is able
10 to walk out of the hospital and not go to
11 rehab, return to work, there are tremendous
12 savings that they're realizing.

13 The national average, again, is about
14 two to three percent of giving tPA. Our rates
15 through the use of telemedicine at UPMC are 25
16 percent and what the studies have shown --
17 again, I put the references in here for you --
18 is that if you increase the use of tPA by 20
19 percent in this country, the health care
20 savings estimate is approximately \$74
21 million. And at UPMC we're actually achieving
22 the 20 percent rate right now.

23 And to summarize, we recognize that
24 Pennsylvania is one of the largest and most
25 rural states in the country. We've got some

1 tremendous challenges here.

2 I'm a young surgeon. I've watched a
3 lot of my colleagues. We've had problems
4 recruiting folks and retaining folks as well.
5 It's hard to get specialists out to the
6 underserved communities and to the rural
7 areas, and this could be a problem for
8 Pennsylvania. We have an aging population as
9 well.

10 I spend my weekends out in
11 Punxsutawney where I hide from medicine and my
12 wife tolerates me being out there and taking
13 care of some groundhogs.

14 But out there, when you talk to the
15 folks out there, they can't -- they don't want
16 to drive to Kittanning. They think Kittanning
17 is a big city. They don't want to come down
18 to Pittsburgh.

19 Parking in Pittsburgh is
20 excruciating. And so for patients, they don't
21 want to come to the big cities. They'd rather
22 go to their local health care clinics or even
23 stay in their homes.

24 And we believe that we can use
25 telemedicine to go back to old-fashioned

1 medicine, go back to their homes. Their homes
2 can have devices where it can tell what pills
3 they've taken, their homes can tell how much
4 they weigh, what their blood sugars are, and
5 this data can get fed back to the patient's
6 physicians as well as back to nurses that can
7 monitor this.

8 We're very appreciative of the
9 efforts of this committee and of the
10 Pennsylvania legislature in general for
11 looking at telemedicine and considering this.

12 UPMC is a leader in the field of
13 telemedicine and we're very excited about
14 this. We are convinced that it's going to
15 have a very strong impact on the cost
16 effectiveness of patient care.

17 We believe that it delivers high
18 quality patient care that all Pennsylvanians
19 deserve. It's going to help to remove some of
20 the barriers of telemedicine, and we believe
21 that the House Bill that you've introduced
22 here is a great start for us in many ways to
23 look at removing the barriers of telemedicine
24 that we think is so important.

25 Thank you very much.

1 CHAIRMAN DELUCA: Thank you, doctor.
2 Let me ask, since you mentioned the fact that
3 we're looking at cost and we are trying to
4 lower costs, what are the statistics in the
5 states that I read off, Louisiana, California,
6 Oklahoma, Texas, Kentucky? Have they saved
7 money by introducing this legislation? I mean
8 paying for these type of procedures,
9 telemedicine?

10 DR. WATSON: I can't tell you on a
11 statewide level, sir. What people are looking
12 at right now -- because telemedicine, this
13 next generation of telemedicine that we're
14 seeing in the last three or four years came
15 about with the advent of technology. Look at
16 YouTube, iPhones, portability of video, and
17 broad-band connectivity.

18 I don't think that we have a state
19 number that I'm aware, but I could be wrong
20 about that. But in terms of specific
21 projects, like the stroke that I've talked
22 about, you're looking at congestive heart
23 failure, monitoring the patients at home,
24 folks with chronic diseases at home such as
25 diabetes, those they are seeing significant

1 cost savings.

2 But it makes sense. I mean if you
3 can -- if you have an 80-year-old patient that
4 has heart failure and every day you're seeing
5 their weight, seeing what medications they
6 took, looking at how much their blood sugar
7 was, when you start seeing the numbers go
8 awry, you can intervene earlier rather than
9 waiting a week or two and having them show up
10 in the ER with decompensated heart failure.

11 It's a whole new way to connect to
12 patients at home.

13 CHAIRMAN DELUCA: And tell me how
14 this works. I imagine the individual would
15 have to have a camera?

16 DR. WATSON: There's a couple ways
17 you can do this. Are we talking about at the
18 home or in the clinic, sir?

19 CHAIRMAN DELUCA: I imagine I'm
20 talking about at home.

21 DR. WATSON: The way it works at
22 home, there's several ways you can do it.
23 They make Bluetooth devices -- this is the
24 wireless headsets, wireless connections,
25 Bluetooth that we use.

1 What you can have is the scale
2 commit -- transmits wirelessly to a device.
3 The pill dispenser, every time they take a
4 pill, it sends the information to the device.
5 When you check your finger sticks to see what
6 your glucose is, that also likewise goes to
7 the device.

8 You can even have their exercise
9 cycle, if you want to become more
10 sophisticated, connected to the device, and
11 that device can hook up to their cable box,
12 cable TV.

13 And then so the nurses -- that data
14 is fed back to the central monitoring
15 facility, be it the hospital, on a daily
16 basis, and you can have your staff members
17 look at that and say this person has
18 congestive heart failure. Their weight's
19 going up. They're not taking their pills.
20 Clearly something is going wrong. We need to
21 call them and intervene now so they can stay
22 at home rather than making the family take
23 time off work or incurring the expense of
24 bringing them into the hospital to manage
25 this.

1 CHAIRMAN DELUCA: Okay. The other
2 thing you brought up, doctor, as we look at
3 costs, you mentioned the fact of laparoscopic
4 surgery and that there.

5 How do we get the medical profession
6 to adopt some of these new procedures?

7 And I'll give you an example. I had
8 a new knee replacement, and I had the
9 minimally invasive procedure. There's quite a
10 few very top orthopedic specialists in
11 Pittsburgh who unfortunately don't do the new
12 procedure.

13 Now, I was out in one day. My
14 brother had the same sickness, same surgery,
15 had the other procedure, the old type
16 procedure, and he was in the hospital for
17 two-and-a-half days.

18 The costs -- we are trying to drive
19 down costs. Why haven't we -- why haven't the
20 surgeons adjusted to the new technology? Is
21 it because they have to go back to school and
22 learn it?

23 DR. WATSON: You hit the nail on the
24 head. I was one of the first ones to do
25 laparoscopic colon surgery in Pittsburgh, and

1 they would have thought I would have carried a
2 pitchfork, had a forked tail or scales, or was
3 some foreign creature because they thought it
4 was heresy.

5 It takes awhile for people to
6 understand the changes, and there is the fear
7 of having to retrain. Because if you have to
8 go back and take five or six months off your
9 practice to learn a high tech new technology,
10 it's very hard for folks to adopt to the new
11 technologies in their practice.

12 But telehealth is somewhat different
13 because you're not changing the way you
14 practice or the tools that you practice with.
15 It's just the way you talk to folks. And you
16 could talk to them through cameras. You can
17 interact with highly trained health care
18 professionals at the remote site, have a nurse
19 examine them, have a nurse look at the wound.

20 Orthopedics is a great example.
21 Instead of having patients sit in the high
22 risk hospital for five or six days after
23 surgery looking at their wound, which is all
24 you're doing, they can be sent to the
25 rehabilitation facilities within one to two

1 days and there the orthopedic surgeons can use
2 a camera to look at the wound and assess it to
3 make sure it's not infected or then make sure
4 it's healing well.

5 But the patients spends three or four
6 less days in the hospital, goes to rehab right
7 away, and so they're getting to rehab, back to
8 work faster, but still being seen by the
9 surgeons.

10 CHAIRMAN DELUCA: Okay. Thank you.

11 Oh, Representative Taylor is here.

12 Representative Taylor just joined us.

13 Any questions on my left?

14 REPRESENTATIVE TAYLOR: I have a
15 question.

16 CHAIRMAN DELUCA: Representative
17 Taylor.

18 REPRESENTATIVE TAYLOR: Thank you,
19 Mr. Chairman.

20 Thank you, doctor, for testifying
21 today. So I understand that this bill has two
22 purposes. One, to make health care more
23 accessible. Right?

24 DR. WATSON: Correct.

25 REPRESENTATIVE TAYLOR: And, second,

1 drive down the costs of health care. So let
2 me understand this. If -- if you can do this
3 from Pittsburgh and Punxsutawney was the
4 example you gave, it could be done in, let's
5 say, in the Asian Pacific area or something
6 like that, could the same procedure be done?
7 Would it be possible to do that?

8 DR. WATSON: Health care has been
9 defined by regions and geographic boundaries,
10 how far you can drive. All those are going to
11 disappear.

12 UPMC right now is -- strategically we
13 look at the Cleveland Clinic, for example,
14 which is one of our main competitors, but
15 we'll be competing with the University of
16 Miami as well as UCLA.

17 It can be done anywhere. The only
18 small, technical glitch is the farther you go
19 there's a slight lag. But we do
20 teleconferencing all the time and I've seen it
21 in some of your offices. You've got
22 teleconferencing devices. In a lot of ways
23 that's what it is. You use some specialized
24 equipment, but you can communicate with
25 patients at great distances.

1 The one I saw was 300 miles away and
2 it was absolutely mind blowing to watch this
3 and how effective it was.

4 REPRESENTATIVE TAYLOR: So with the
5 idea of driving down health care, could it be
6 the fact that a doctor in Pittsburgh would be
7 more expensive than a doctor, let's say, in
8 India, would that be the case, and if you're
9 to drive down health care, that could be one
10 way to do it?

11 DR. WATSON: Well, the issue there
12 really is licensing in that out-of-state
13 licensing is an issue and that we have to have
14 licensed physicians to do this.

15 And to be licensed at any state in
16 the United States, you have to have gone
17 through the United States medical training.

18 What some states have done is they
19 have telemedicine -- telemedicine licensing.
20 I think Texas is one of them, too, sir, that
21 physicians from one state can help to do
22 medicine in another state.

23 But out of the country, at this
24 juncture that I'm seeing, especially with
25 these interactions, you'd have to be board

1 eligible or a board certified physician.

2 REPRESENTATIVE TAYLOR: So the global
3 market could apply but not necessarily here
4 because of the license? Is that what I hear?

5 DR. WATSON: I think the global
6 market could apply. I don't think people --
7 people could not come in legally from the
8 outside and do this from the outside.

9 There's going to be outreach from
10 Pennsylvania physicians to other regions
11 outside of the country, but it's not legal to
12 do the reverse because of licensing reasons.

13 REPRESENTATIVE TAYLOR: Just to be
14 clear, I applaud the idea of making health
15 care more accessible to folks who might
16 otherwise be denied, like the examples you
17 gave in the rural areas, so this is what I'm
18 trying to get at, is mostly trying to
19 understand will we be losing doctors or, you
20 know, putting doctors out of business and in a
21 state where we already have --

22 DR. WATSON: Yes.

23 REPRESENTATIVE TAYLOR: -- a
24 difficult job retaining doctors?

25 DR. WATSON: You know, I'll give you

1 an example that's interesting. That we went
2 to a hospital in the UPMC system and I was a
3 bit leery. It was the first time that we had
4 spun telemedicine at one of our big rural UPMC
5 hospitals and their response was
6 overwhelmingly favorable.

7 And they gave us an example of they
8 had a physician out there who was a young
9 surgeon. And having just been a young
10 surgeon, and I still am a relatively young
11 surgeon, that it's a bit -- it's a bit scary
12 the first year or two that you're out in
13 practice because you're all alone. The safety
14 net's gone. You're on your own.

15 And he was out there an hour and a
16 half away. And the other surgeon who worked
17 with him, they didn't get along very well, so
18 he basically had very little back-up.

19 In this way, we could do
20 teleproctoring where if this person had a
21 question or needed some advice, we could put
22 cameras in the wound, we could communicate
23 with him to help decrease converting someone
24 from laparoscopic procedure to an open
25 procedure, shorten the OR times, and make sure

1 the surgery is done just as well.

2 I would love to partake in
3 telementoring, help folks out there remotely.

4 REPRESENTATIVE TAYLOR: Okay. Thank
5 you very much.

6 Thank you, Mr. Chairman.

7 CHAIRMAN DELUCA: Thank you.

8 Representative Mensch.

9 REPRESENTATIVE MENSCH: Doctor, good
10 morning. Thank you.

11 I think it's a great idea. I come
12 from an industry of high tech so any way that
13 we can shrink the distance between the patient
14 and the doctor I think is a really good idea.

15 But I do have a couple of questions,
16 and some of them I think might also go, I
17 think, to ultimately to the prime sponsor of
18 the bill.

19 But let's talk about the initial
20 cost, getting started in telemedicine. Most
21 of the equipment, I would think, is already
22 fairly common equipment in the hospitals or
23 are you making major investments in new
24 equipment per -- per incident? An incident
25 would be you set one up, the practice next to

1 you setting one up, and so forth. What kind
2 of costs are we talking about?

3 DR. WATSON: It depends on what you
4 want to be, and I don't mean to hedge that
5 much. But to be honest with you there are
6 capital costs that we know exist buying the
7 equipment. The price of the equipment has
8 come down, I would say, by 50 percent so far
9 with the new vendor in the market.

10 The main ones that people use are
11 Polycom and Tandberg and Life Science. But
12 it's no different than looking at the wiring
13 even in the -- even in this facility here or
14 the hospitals. These enormous infrastructures
15 have been built to support the E-records,
16 computers, the flow of information through
17 hospitals. We're piggyback on the most --
18 we're piggybacking on the most expensive
19 aspect of this, which is really the broad-band
20 connectivity to do this.

21 You have to design devices to
22 interact with folks, and that's what folks --
23 that's what we're developing right now and
24 companies are.

25 So it might be a video camera. You

1 can use a \$50 USB camera at some levels, but
2 there are sophisticated devices that you can
3 install. You can install a telemedicine table
4 that sits in the ER and, therefore, if a
5 patient comes in in congestive heart failure,
6 you can listen to their lungs with an
7 electronic stethoscope. If they have a lesion
8 on their arm, you can take a picture of it.
9 So it can be multi-purpose.

10 The goal is to combine all these
11 efforts together which is why we have our
12 Center for Telehealth to use the same
13 equipment so it's not redundantly being
14 purchased.

15 But the biggest investment, I think
16 in my mind, has been paid for with the actual
17 physical backbone that carriers like -- that
18 Windstream or Alcatel or Alltel or Verizon
19 have done for us.

20 REPRESENTATIVE MENSCH: Okay. So
21 that's already being built as a matter of
22 looking at the infrastructure in the country,
23 the cost for the hospital.

24 But for the equipment, are we talking
25 10,000, 20,000, a 100,000?

1 DR. WATSON: If you want to do simple
2 face-to-face teleconferencing, like what
3 psychiatry does, you can buy the equipment for
4 about 3 or \$4,000 and get a simple Polycom
5 device doing point-to-point calling.

6 If you want to get -- they make a
7 portable suitcase which you can put into an
8 overhead compartment. That's \$50,000.

9 And so if you're a home care nurse in
10 Pennsylvania, you can take this around and go
11 to a patient's house and you can transmit the
12 patient's breath sounds, heart tones. You
13 could look at their -- their tonsils. You can
14 take pictures of skin lesions. And you could
15 wirelessly, through a satellite uplink,
16 broadcast this back to the physician's offices
17 or the hospital. That's \$50,000 to do that.

18 And then if you think about it, if
19 you save five or six admissions a year, you
20 might even pay for it using that device
21 alone.

22 The telemedicine table's around, the
23 telemedicine suites is about 50,000 to 55,000
24 and that can be used for almost any
25 speciality.

1 REPRESENTATIVE MENSCH: Two more
2 quick questions. Broad-band, have there been
3 any incidents when broad-band isn't
4 available?

5 Let's say a diagnosis is in progress
6 and you lose the broad-band connections, are
7 there any legal ramifications?

8 DR. WATSON: We haven't encountered
9 any yet. And what a lot of folks do and the
10 important thing about telemedicine is to make
11 sure you set it up and set it up so it works
12 and works correctly.

13 In the last several years, the
14 explosion of broad-band has meant incredible
15 connectivity and very few dropped calls. I
16 think if there were going to be large hospital
17 connections so if UPMC Presbyterian is dealing
18 with UPMC Northwest, with a very large tele --
19 telemedicine network, there's actually
20 redundancy built into those connections. So
21 if one circuit goes down, you just pick it up
22 on the other.

23 REPRESENTATIVE MENSCH: One last
24 question. In the -- in the bill, it
25 enumerates several conditions that an insurer

1 needs to be satisfied with the medical
2 facility. It says -- the third point is that
3 the use of telehealth will result in lower
4 health care costs than if it were not used.

5 How do we make that evaluation?

6 DR. WATSON: That is very difficult.
7 I think it's going to be hard for us to say.
8 I don't think we have encountered that before
9 in medicine.

10 I've personally never seen that in my
11 practice, being asked to say outright how much
12 I saved doing laparoscopic surgery.

13 But I think we're beginning to look
14 at these very specific programs, like stroke,
15 where it shows that if the person gets the
16 clot-busting drug within a half an hour versus
17 four hours they don't go to rehab. They can
18 start working in two weeks rather than
19 spending their life not being able to work
20 because their left side of their body doesn't
21 work anymore.

22 I think it's in instances like that
23 we're going to see the cost savings. Can the
24 physicians document it up-front? I -- I'd be
25 concerned about the physician doing it.

1 I think that concerns me tremendously because
2 I never had that placed on me before.

3 But I think that we're going to have
4 to. Hopefully with this committee. I'd be
5 happy to come back here any time and provide
6 as many examples as you would like to show
7 that specific projects and pilot projects that
8 we do, in conjunction with our health plan and
9 other payers as well, show how these benefit
10 these patients.

11 REPRESENTATIVE MENSCH: Thank you
12 very much, doctor.

13 CHAIRMAN DELUCA: Representative
14 Boyd.

15 REPRESENTATIVE BOYD: Somewhat on the
16 same line as Representative Mensch's
17 questions.

18 How much specifically has UPMC
19 invested in this program so far?

20 DR. WATSON: In the Center for
21 Telehealth?

22 REPRESENTATIVE BOYD: Yeah.

23 DR. WATSON: The biggest investment
24 that UPMC has done to support this and the
25 hospital in general is that it just signed a

1 \$300 million deal with Alcatel-Lucent to
2 upgrade its backbone.

3 We're talking up to a hundred megabit
4 backbone up to a 10 gigabit fiberoptic core
5 backbone. And what that's going to do is
6 provide the ability that we can route high
7 band with signals throughout our health care
8 system.

9 Currently the ring, the fiber ring,
10 includes the hospitals within the city of
11 Pittsburgh. We're going to be building this
12 out, not necessarily the fiber ring, but
13 building a lot of the infrastructure upgrades
14 out in the next -- three to five years is the
15 roll out. That's the heaviest investment we
16 have.

17 And what we're doing now is looking
18 at vendors and trying to establish ways we can
19 have purchasing agreements with vendors,
20 specifically Polycom to decrease the costs,
21 because these are the main vendors that we use
22 right now.

23 And we're also looking at ways to
24 develop our own equipment and that's probably
25 going to be cheaper.

1 REPRESENTATIVE BOYD: Ultimately
2 you're talking \$300 million. It's a
3 substantial investment, which obviously would
4 imply that you guys believe that this is a
5 long-term, viable solution to providing health
6 care and health -- health care for a broader
7 range of patients. Is that a fair statement?

8 DR. WATSON: Yes.

9 REPRESENTATIVE BOYD: I mean I
10 wouldn't imagine anybody would be investing
11 \$300 million if they didn't think they were
12 going to get some return on that investment in
13 the future.

14 DR. WATSON: The \$300 million is for
15 all the IT infrastructure, but it's going to
16 have the capacity to handle telehealth. We're
17 not -- I want to be clear. We're not
18 investing \$300 million specifically for
19 telemedicine, but it's giving us the capacity
20 to do what we need in telemedicine and that's
21 part of the rationale behind doing this.

22 I'll say, you know, if I had my white
23 coat on now and tell you what, from my
24 personal point of view as a physician, and
25 also, to be honest, having had open heart

1 surgery and been on the receiving end of what
2 I do, which is pretty miserable, there is --
3 this is a real need for us. Patients will
4 really benefit.

5 When you come home after surgery and
6 you feel like hell, the last thing you want to
7 do is have to go back to your physician's
8 office. And if a visiting nurse could come to
9 my house and drop off a device where I could
10 talk to the physician via camera, I wouldn't
11 have to go to the office. They could listen
12 to my lungs, make sure I'm okay. My family
13 didn't have to take time off work.

14 I mean the ramifications of this are
15 really tremendous.

16 REPRESENTATIVE BOYD: Okay. And
17 we're here actually -- I mean it's fantastic
18 information and -- and I'm a little bit, and I
19 think other members on the committee, excited
20 about the -- what technology can do for the
21 health care industry.

22 But really the crux of this and what
23 we're talking about is this House Bill 1849.
24 How do you see this bill as being imperative
25 to the proliferation, if you will, the

1 expansion of the use of telehealth services?

2 Is this -- I mean it's a very short
3 bill and ultimately its goal is to mandate
4 insurance coverage for telehealth procedures.

5 Do you see this as being absolutely
6 essential or is this industry going to explode
7 without this bill?

8 DR. WATSON: The biggest obstacle to
9 telemedicine now is physicians being
10 reimbursed for this. And it's what Chairman
11 DeLuca said in that physicians want to adopt
12 some of these technologies but at times they
13 need to be educated, but also they need to be
14 reimbursed for this.

15 If physicians are going to take time
16 out of their schedules, for example, to do a
17 telemedicine clinic, they should be reimbursed
18 for it as long as -- and I agree with what
19 you're saying in terms of the exams should be
20 as good and the people need to be satisfied
21 with the quality of care. You need to deliver
22 high quality care that is as good as you would
23 have done were you in person.

24 I think the biggest obstacle that we
25 have is having the payers help to develop

1 methods with us to pay for telemedicine that
2 we can go to a payer, like our health plan, or
3 with the state's Medicare program, and to look
4 at models for telemedicine, such as stroke or
5 wound care, ophthalmology, cardiology, and
6 look -- and we can look together for very good
7 viable models that make sense.

8 I think to say that absolutely all
9 telemedicine, blanket, should be paid for, in
10 my mind I'd have to think about that some
11 more. But I think very specific beneficial
12 programs that we can look at, and we're
13 starting to see more and more, I think there's
14 going to be a huge array of programs that
15 would -- that should be covered.

16 But this bill has the ability to
17 remove one of the greatest barriers for
18 telemedicine, which is, if we can provide high
19 quality care that's just as good as if we saw
20 the patient in person, the physician should be
21 reimbursed for that. And that's the barrier.

22 REPRESENTATIVE BOYD: So if I
23 understand what you're saying correctly, I'm
24 thinking back to years ago, I mean I'm talking
25 25 years ago probably, maybe even longer, 30

1 years, my grandfather had a pacemaker put in
2 and he had, believe it or not, a simple system
3 that he hooked into the phone and the
4 Lancaster General Hospital did monitoring of
5 him at that point in time.

6 So this isn't new technology. It's
7 just advanced. I mean this idea of -- of
8 monitoring from the home has -- has been done
9 for a long time.

10 But what you're saying is, is that
11 insurance companies are not reimbursing for
12 any of those services at all. So as an
13 example, if there's a telemed conference or
14 telemed consult and normally it would be a
15 follow-up visit to surgery and you do it via
16 telemed, if that person came into your office,
17 that person -- or you would be reimbursed for
18 those services. You're saying today, under
19 current insurance procedures, I'll use that
20 term, because I think they could reimburse,
21 you're saying they don't. Is that a correct
22 statement?

23 DR. WATSON: No. I'm sorry. I
24 should clarify that, sir.

25 Some of the services are being paid

1 for in rural underserved areas. CMS will
2 reimburse -- reimburse for telestroke in rural
3 underserved areas.

4 But the issue -- like we have
5 hospitals that are not in rural areas or in
6 underserved areas, but they don't have a
7 neurologist.

8 So if a patient in that area has a
9 stroke and they're not in an underserved and
10 rural area, they go to the emergency room and
11 the neurologist is not available, it's no
12 different than if they were out in the rural,
13 underserved area. And that's one of the
14 barriers that we're really encountering.

15 REPRESENTATIVE BOYD: Are insurance
16 companies resistant to reimbursing for these
17 procedures at this point in time?

18 DR. WATSON: We've been talking to
19 our -- our -- our payer, the UPMC health plan,
20 and we actually had some very positive
21 conversations with them.

22 We're looking at pilot programs which
23 would include, but not limited to, telestroke,
24 wound care, there's some consideration of
25 ophthalmology. They're working on paying for

1 psychiatry as well for the adolescent program
2 that I described earlier. And I think there's
3 going to be some tremendous inroads and some
4 pilot programs to be developed together.

5 REPRESENTATIVE BOYD: Thank you,
6 sir.

7 Thank you, Mr. Chairman.

8 CHAIRMAN DELUCA: Just -- just to
9 piggyback on the previous question that
10 Representative Boyd asked, you stated that you
11 would send a health care nurse with this
12 equipment, home health care nurse with
13 equipment, and that would be sent back to the
14 doctors then. Is that correct?

15 DR. WATSON: Correct.

16 CHAIRMAN DELUCA: Would -- how long
17 does that take? I mean when I say -- I'm not
18 talking how long would that take. How long
19 would that take for the doctor to review
20 that? Because I would imagine he's not going
21 to get rid of his practice. He's going to be
22 seeing patients.

23 And so what happens? Does he drop
24 that patient load and --

25 DR. WATSON: The physician --

1 CHAIRMAN DELUCA: -- then
2 concentrates on the home health care one or
3 how does that work?

4 DR. WATSON: There's a few models
5 that you can do this. We saw a number of
6 physicians in Texas. One was a cardiologist
7 who gave up his entire clinic-based practice.
8 All he does is telemedicine. He sees about
9 nine to twelve patients a day in a row. It's
10 just like being in clinic, but his office
11 is -- he sits in an office. These folks can
12 be a couple blocks away or a hundred miles
13 away.

14 For the model that you gave, I would
15 expect it's no different than what I face
16 now. If I see a series of patients in clinic,
17 I see a follow-up patient every 15 to 20
18 minutes. I see new patients every 45
19 minutes.

20 If some data came in, my nurse would
21 review it and say to me, you know, Andrew,
22 this data just came in, you should review
23 this, or at the end of the day she will have
24 screened it as it came in or there will be
25 a -- I'll either screen it real-time or my

1 nurses will screen it real-time or they'll
2 look at it at the end of the day.

3 CHAIRMAN DELUCA: So the nurse -- the
4 nurse in your office would screen it first --

5 DR. WATSON: Correct.

6 CHAIRMAN DELUCA: -- and give it to
7 you?

8 DR. WATSON: I think if this
9 information, when this program expands, my
10 view of it is we have a telemedicine center.
11 We have a series of folks in the telemedicine
12 center constantly monitoring the data.

13 Because if this becomes a large
14 project, there will be data coming in
15 real-time. And with the electronic medical
16 record, you can actually have abnormal values
17 automatically flagged, more severe values put
18 to the head of the queue, so if someone comes
19 in and your blood count is one-third, that
20 gets moved to the top of the list for someone
21 to review versus everybody else where their
22 blood counts are normal.

23 And with some very simple software,
24 you can actually -- that the person reviewing
25 it will see the most risky ones or the most

1 important ones up-front.

2 CHAIRMAN DELUCA: And one final
3 question. Representative Taylor mentioned
4 about this concern of whether we would
5 outsource some of this stuff to other
6 countries.

7 Is it -- am I under the misconception
8 then that we already do some of that with
9 radiologists?

10 DR. WATSON: They can do some.

11 CHAIRMAN DELUCA: Are we already
12 doing that right now?

13 DR. WATSON: They do what -- they can
14 do what is called a wet read. And I think
15 some of this has been done in India and other
16 countries where they can give you a
17 preliminary read, so to speak.

18 But in terms of the actual practice
19 of medicine -- I'm not saying that radiology
20 isn't a part of medicine. But I'm saying
21 examining patients and seeing patients and
22 prescribing medicines, which is -- prescribing
23 treatments and medicines, that has to be done
24 by a licensed physician in the state of
25 Pennsylvania.

1 CHAIRMAN DELUCA: So the radiologists
2 are not licensed in our states?

3 DR. WATSON: I don't -- I don't know
4 the exact specifics of how this works. I'm
5 not sure that we do this. I mean how that
6 works at a remote site, I couldn't answer
7 that.

8 CHAIRMAN DELUCA: Okay.

9 DR. WATSON: But I know in terms of
10 prescribing treatment, you have to be a
11 licensed Pennsylvania physician.

12 And at UPMC we're actually going to
13 have a 24/7 teleradiology program where our
14 physicians can do this anywhere in the state
15 or in the country.

16 CHAIRMAN DELUCA: Very good. Any
17 other questions?

18 Thank you, doctor. Thank you for
19 your testimony. We certainly look forward to
20 talking to you more about this certainly
21 interesting subject. As technology changes we
22 certainly need to change with what we do.

23 DR. WATSON: But you've seen it
24 first-hand and whatever I can do to help and
25 talk, I'm willing any time to come out here.

1 It's with a passion, and I love this and enjoy
2 this.

3 CHAIRMAN DELUCA: Just this thought.
4 Just talking about my first-hand, let me give
5 you an example that I also experienced. I
6 just want to -- we talk about home health care
7 nurses.

8 I had a home health care nurse come
9 in at first, when I was first sent home,
10 because I had a week in the hospital and
11 therapy.

12 As we know, we're talking about
13 reducing hospital-acquired infections and I
14 wonder about the infections that we would save
15 with our home health care situation.

16 To give you an example, she -- she
17 was going to change the wound dressing and she
18 goes into her briefcase to pick out her
19 computer and she goes and washes her hands.
20 Then she comes back, and she's back in her
21 briefcase to the computer there, and then she
22 wants to change -- change the dressing on the
23 wound, which I refused to let her do.

24 So I'm just wondering, you know, we
25 need to start looking at that. Some of the

1 home health care nurses are not cleaning their
2 hands.

3 DR. WATSON: You're exactly right.
4 Handwashing is a major part of what we do.

5 CHAIRMAN DELUCA: That's a major
6 problem in our hospitals and that there, yet
7 in home health care you wash but yet you go
8 back into your briefcase to pick out your
9 computer because everything is on your
10 computer anymore and then you start changing
11 the wound. Doesn't make sense to me.

12 Thank you.

13 DR. WATSON: Thank you all for your
14 time.

15 CHAIRMAN DELUCA: We do have our
16 sponsor of the bill that just came in.

17 REPRESENTATIVE COHEN: Go ahead.

18 CHAIRMAN DELUCA: Okay. Mark Cohen,
19 who is the prime sponsor of the legislation,
20 Mark, do you have a statement you want to
21 make?

22 REPRESENTATIVE COHEN: Yeah. I'll
23 just be very brief, Mr. Chairman.

24 CHAIRMAN DELUCA: Sure.

25 REPRESENTATIVE COHEN: I believe that

1 this legislation is an important step towards
2 both long-term health care and it enables
3 people to be treated for -- for a disease they
4 may have earlier and more comprehensively than
5 they might otherwise be.

6 It should -- it should save health
7 care cost in the some instances by limiting
8 the need for travel and by limiting the need
9 to force doctors and other medical personnel
10 to travel.

11 I believe this is one of many, many
12 things that we can do to improve the access of
13 health care for all Pennsylvanians, and I
14 deeply appreciate, Mr. Chairman, your very
15 prompt scheduling of this hearing to give the
16 advocates of this legislation a chance to make
17 their case.

18 This is the kind of thing that can
19 get bipartisan agreement and become enacted
20 into law, and I deeply appreciate your very
21 prompt leadership on this matter.

22 CHAIRMAN DELUCA: You're welcome,
23 Representative. We have a -- I think some of
24 our members want to ask you a couple
25 questions.

1 Representative Mensch.

2 REPRESENTATIVE MENSCH:

3 Representative Cohen, I think we would agree
4 that this is in the right direction.

5 I'd like to get a sense, though, for
6 your thinking in the provision of coverage
7 where you talk about -- actually it's even
8 before that.

9 But whose responsibility is it for
10 the investment of the initial equipment, the
11 hospital or will the insurance pay for this?
12 Who is going to make that initial investment
13 in the equipment?

14 We've already talked with -- with
15 Dr. Watson. A lot of it is vetted already and
16 in the development of the infrastructure in
17 the country, but there will be some unique
18 equipment at the hospital end and at the
19 patient end. Who makes those investments?

20 REPRESENTATIVE COHEN: I believe the
21 standard of practice is for the hospitals to
22 make the investments first and then to be
23 reimbursed. On a per patient basis, depending
24 on the utilization of the services.

25 REPRESENTATIVE MENSCH: Okay. So the

1 insurance companies in the end are going to
2 bear that cost? Is that what you're saying?

3 REPRESENTATIVE COHEN: I think the
4 price of services depends, in part, upon the
5 initial investment and the cost of -- of
6 the -- of the services by the medical
7 providers.

8 So I assume the insurance companies
9 will bear part of the costs ultimately, and
10 they'll bear a large part of the savings
11 ultimately from -- from quicker treatment and
12 from not paying transportation costs.

13 I know in my district, for instance,
14 the leading hospital is Albert Einstein
15 Medical Center which is among the preeminent
16 hospitals in Philadelphia in many ways but
17 it's not the preeminent hospital in every
18 way.

19 And to transfer a patient from
20 Einstein Medical Center to the University of
21 Pennsylvania Medical Center, which is the
22 preeminent hospital in other areas, it -- it
23 is a very expensive task and a very
24 time-consuming task if there's heavy traffic.

25 So -- so one instance of -- of

1 somebody not having to physically travel to
2 the University of Pennsylvania Hospital from
3 Einstein Medical Center could easily save
4 thousands of dollars in health care costs, and
5 in rural areas where transportation is even
6 more difficult. Those other costs would be
7 greater.

8 So I think there would savings and
9 cost effectiveness.

10 REPRESENTATIVE MENSCH: I would -- I
11 would agree with you on your observation of
12 the cost savings.

13 My -- my concern would be that the
14 insurance companies end up paying for the
15 initial investment for the hospitals.

16 Moving on to another question then,
17 under the provision of coverage, in point
18 number three, you say that the use of
19 telehealth will result in lower health care
20 costs than if it were not in use.

21 Now, this is an identifier that the
22 professional needs to certify. How is the
23 professional going to certify that the
24 procedure is always going to save money? What
25 mechanism do we have to identify or how are we

1 going to quantify that?

2 REPRESENTATIVE COHEN: I believe that
3 will be a question based on the judgment of
4 the professional. I'm not sure that it can be
5 inherently quantified.

6 REPRESENTATIVE MENSCH: But we say
7 that they have to be able to, but we say that
8 they can't?

9 REPRESENTATIVE COHEN: I think they
10 can't with -- with a hundred percent precision
11 in all cases, I think ultimately -- ultimately
12 this is a belief of a professional based on
13 considerable professional experience.

14 REPRESENTATIVE MENSCH: Okay. I'm
15 just -- I'm just asking because it's within
16 your bill and it's one of the criteria for the
17 certification for the doctor or the
18 professional to be able to provide the
19 coverage. So I think --

20 REPRESENTATIVE COHEN: I think this
21 was an attempt to deal with your concerns
22 about costs; but if people would feel more
23 comfortable not having it in there, I think I
24 would be willing to remove it.

25 But this was just an attempt to limit

1 costs.

2 What we're talking about is using the
3 Einstein/University of Pennsylvania analogy,
4 again, if somebody -- if -- if somebody broke
5 his arm, for instance, something that
6 Einstein, you know, is fully capable of
7 dealing with, there would be very little
8 argument you could make in costs for having a
9 specialist from the University of Pennsylvania
10 look at it. It would be a very good question,
11 but if the delay being seen crucial, you know,
12 of course, if you get there 45 minutes late
13 and there's rush hour traffic, there's very
14 little that could be changed.

15 But if it was some rare disease that
16 the University of Pennsylvania specialized in,
17 where the doctor's opinion -- every -- every
18 minute was of vital significance on the thing,
19 then there would be savings.

20 That's all it seeks to do.

21 REPRESENTATIVE MENSCH: I think
22 conceptually you and I agree so maybe we can
23 continue this conversation on this offline.

24 Thank you, Mr. Chairman.

25 CHAIRMAN DELUCA: Thank you.

1 REPRESENTATIVE COHEN: Thank you,
2 Mr. Chairman.

3 CHAIRMAN DELUCA: Thank you.

4 The next individual to testify is
5 Kathleen Fitzgerald, the executive director of
6 the North Penn Visiting Nurse Association and
7 the Pennsylvania Homecare Association.

8 Welcome.

9 MS. FITZGERALD: Good morning. My
10 name is Kitty Fitzgerald. I'm the executive
11 director of the North Penn Visiting Nurse
12 Association in Lansdale, Montgomery County.
13 I'm here representing my organization.

14 And I am also here representing the
15 Pennsylvania Homecare Association. And for
16 the record, I would like to say I am a home
17 care nurse for the last 35 years.

18 CHAIRMAN DELUCA: Very good.

19 MS. FITZGERALD: Thank you. I also
20 thank you for this opportunity to talk with
21 you about telehealth, particularly its use in
22 patients' homes across Pennsylvania. In fact,
23 Pennsylvania's home health industry is a
24 leader in telehealth use and, according to a
25 study conducted by the University of

1 Pittsburgh, more than 7,000 units are being
2 used today by home health agencies.

3 This significant number is the result
4 of three congressional appropriations that
5 were awarded to the Pennsylvania Homecare
6 Association totaling \$800,000 that provided
7 agencies with seed money to purchase
8 telehealth equipment.

9 But before I go any further, I think
10 it's important to define what I mean by
11 telehealth. Telehealth or telecare is the
12 remote monitoring of patients' vital signs and
13 activities. About 30 percent of home health
14 agencies utilize some form of telehealth or
15 in-home technology, which includes vital signs
16 monitoring, automated medications monitoring,
17 activity sensors, and certainly emergency
18 response systems. Our agency currently uses
19 remote vital signs monitoring.

20 Remote vital signs monitoring is
21 especially beneficial to patients with chronic
22 conditions such as congestive heart failure.
23 According to the American Heart Association,
24 nearly 5.3 million Americans have heart
25 failure and more than 287,000 people die each

1 year with heart failure.

2 Heart failure is also the most common
3 diagnosis of Medicare patients and more
4 Medicare dollars, 2.4 billion, are spent on
5 the diagnosis and treatment of heart failure
6 than any other diagnosis. It is the primary
7 reason for an estimated 6.5 million hospital
8 days annually.

9 In 2005, the total estimated cost for
10 treating heart failure was 27.9 billion and
11 increasing to nearly 29.6 billion the
12 following year.

13 With this in mind the North Penn
14 Visiting Nurse Association initiated a heart
15 failure/telehealth program to manage patients
16 with this chronic disease in their own homes.
17 Our program is called TLC, telehealth learning
18 control.

19 The objectives of this program are
20 to:

21 Detect signs of impending
22 decompensation and provide appropriate
23 intervention.

24 Reduce the number of unnecessary
25 visits to the emergency department and costly

1 readmission to the hospital.

2 Improve the quality of life for
3 patients by promoting self-management.

4 Improve compliance through education
5 and increased understanding of disease
6 process.

7 And, lastly, promote communication
8 between patient, physician and clinician.

9 Our agency began its program in June
10 2006 when we were asked to participate in a
11 national study looking at the effectiveness of
12 telehealth and nursing utilization.

13 In December of that same year, at the
14 completion of the study, we made the decision
15 to lease 30 monitors and six months later we
16 leased an additional 30 monitors. Over the
17 life of the lease, our organization will spend
18 close to \$220,000 just for the equipment.

19 Since there is no reimbursement for
20 telehealth services, the cost has been
21 absorbed by the organization because we
22 believe that our home health patients with
23 heart failure would ultimately benefit from
24 care management that included telehealth
25 monitoring.

1 Below are summaries of three research
2 projects which demonstrate the cost savings
3 benefit of using telehealth equipment in
4 caring for the supporting -- and supporting
5 clients with chronic illness in their homes.

6 The first study that I'm going to
7 reference is the Pennsylvania State University
8 cost analysis of telehome care.

9 A total of 171 diabetic patients in
10 Philadelphia were included in this study. 86
11 patients received video telehealth visits in
12 addition to traditional home care by a nurse.
13 The other 85 patients received traditional
14 home care but no telehealth equipment.

15 I would like to direct your attention
16 to the difference between the two groups with
17 regard to -- with regard to the percentage
18 requiring hospitalization and then the
19 associated estimated costs of those
20 hospitalizations.

21 The second study is the telehome care
22 outcomes study. Strategic health care
23 programs compared outcomes between patients
24 that received telehealth with other home care
25 services and patients that received

1 traditional home care services but, again, no
2 telehealth equipment.

3 Data utilized for this study came
4 from 41 states and was taken from millions of
5 CMS-mandated assessments transmitted from 178
6 home health agencies utilizing telehealth
7 monitors and more than 300 agencies that did
8 not use telehealth equipment.

9 The study is the cumulative result of
10 27 months of experience dating from January
11 1st, 2002 through March 31st, 2004. And,
12 again, I direct your attention to the figures
13 as they relate to hospitalization rates and
14 emergent care visit rates.

15 The third and final study that I'd
16 like to reference is the Kaiser-Permanente
17 telehome care research project.

18 This research project studied 102
19 patients who received telehealth in addition
20 to routine home health care and 110 patients
21 as the control group who received routine home
22 health care but, again, no telehealth
23 equipment.

24 Patients had congestive heart
25 failure, chronic obstructive pulmonary

1 disease, cerebral vascular accident, cancer,
2 diabetes, anxiety, or need for wound care.

3 The total cost per patient, including
4 outpatient costs for physician and emergency
5 room visits, laboratory and pharmacy tests and
6 hospitalizations costs, were \$1,948 per
7 patient having telehealth and in-home visits
8 and \$2,674 for patients receiving just home
9 health care and no telehealth equipment.

10 The study also found no difference in
11 quality indicators and patient satisfaction
12 between the control group and the telehealth
13 group.

14 The question that begs to be asked is
15 why, despite valid research that supports the
16 use of telehealth by home health agencies in
17 caring for chronically ill patients, is there
18 no reimbursement by insurers, including
19 Medicare and Medicaid?

20 And as a follow-up question, will the
21 indifference on the part of insurers stifle
22 technology's use because in the end telehealth
23 monitoring has demonstrated that it can save
24 insurers thousands of dollars by reducing
25 costly hospitalizations and emergency room

1 use.

2 You might be prompted to ask me why
3 then are home health agencies, like the North
4 Penn Visiting Nurse Association leasing, or in
5 the case of some of my peers, purchasing the
6 equipment when there is no reimbursement?

7 The answer is in the reimburse --
8 reimbursement methodology. Under traditional
9 Medicare, home health agencies are reimbursed
10 under a prospective payment system which is
11 based upon a 60-day episode of care.

12 In other words, we receive one
13 bundled payment which is calculated on a
14 number of factors, such as the seriousness of
15 the illness and the functional capabilities of
16 the patient.

17 In a 60-day episode of care, an
18 agency can reduce nursing visits but continue
19 to monitor the patient closely, the patient
20 recovers and stays out of the hospital, thus
21 enriching the care of the patient and
22 efficiently utilizing the resources of the
23 agency.

24 This was the basis of the original
25 research study in which we participated.

1 Telehealth is the key that enables --
2 enables agencies to do this. In fact, by
3 implementing a remote vital signs monitoring,
4 one or more nursing visits per week can be
5 eliminated. The average cost of a nursing
6 visit is approximately \$100.

7 Other insurances, such as managed
8 care Medicare and Medicaid can reimburse home
9 health agencies by the visit. Therefore, the
10 use of telehealth is a disincentive, but for
11 as little as \$10 a day a patient who has
12 managed care Medicare or Medicaid can be
13 evaluated remotely by a nurse, receive quick
14 response to an impending medical emergency,
15 avoid an unnecessary visit to an emergency
16 room or hospitalization.

17 This is a win/win situation for
18 everyone. Patients experience improved health
19 outcomes and remain out of the hospital.
20 Insurers end up saving money in the end due to
21 reduced rehospitalization rates and lower
22 emergency room utilizations, and home health
23 agencies can efficiently utilize their
24 resources while continuing to provide the best
25 care to their patients.

1 Unless all payer sources recognize
2 the cost effectiveness of providing in-home
3 health care that includes the use of
4 telehealth, thousands of chronically ill
5 patients will not have the full advantage of a
6 care management tool that has proven to
7 improve patient outcomes.

8 House Bill 1849 provides for
9 reimbursement of telehealth services by all
10 Commonwealth insurers. Passage of this
11 legislation would be a significant step
12 forward for Pennsylvania and is in concert
13 with the Governor's Prescription for
14 Pennsylvania.

15 It would also support and promote
16 chronic care management which has proven to be
17 effective in controlling rising
18 hospitalization rate costs.

19 I think we are all in agreement that
20 technology must play a more significant role
21 in health care, not just the delivery of the
22 care but in managing health care costs and
23 utilizing scarce resources more efficiently.

24 As budgets continue to bulge with
25 growing health care costs, government must

1 look at ways to reduce costly care, with an
2 emphasis on prevention.

3 Home health care has a long-standing
4 proven history in being proactive in educating
5 and engaging patients in disease management.
6 The added value of telehealth further enhances
7 that relationship for the consumer by engaging
8 them in the day-to-day monitoring of their
9 health care, allowing them to easily manage
10 their illness more effectively.

11 Finally, I have provided you with two
12 scenarios describing home patients using
13 telehealth and how this one tool has
14 dramatically affected their lives.

15 I would be happy now to answer any
16 questions that you might have, and I thank you
17 for this opportunity to being here this
18 morning.

19 CHAIRMAN DELUCA: Well, thank you,
20 Kathleen. I guess one of the questions you
21 asked was the fact that this could be a
22 savings. You wonder why the insurance
23 companies would not want to reimburse for
24 this.

25 And I would think, as I look at some

1 of your examples here, the savings you cite on
2 a couple of these examples, I'm sure the
3 insurance carriers, your results on number
4 one, 87,327 compared to no telehealth care
5 \$232,872, is really a substantial amount of
6 revenue.

7 So why would you believe the
8 insurance companies who certainly have cut
9 cost in other avenues in health care would not
10 want to go to telehealth and reduce their
11 costs to -- for their -- their companies?

12 MS. FITZGERALD: You know --

13 CHAIRMAN DELUCA: It's just -- it's
14 such a prevalent thing.

15 MS. FITZGERALD: It sounds like such
16 a simple answer, doesn't it?

17 CHAIRMAN DELUCA: Yes, it sounds very
18 simple, but I guess it can't be that simple
19 because --

20 MS. FITZGERALD: It isn't.

21 CHAIRMAN DELUCA: -- the insurance
22 companies are certainly looking for ways
23 that -- you know, as a visiting nurse, they're
24 cutting back on a lot of things what they --
25 what they pay for, the copayments, and the

1 fact that some of the procedures where they
2 save, they're not necessary.

3 So I mean why would they not be
4 interested in such a thing? You're one
5 example here. I imagine if you do that
6 throughout the Commonwealth, that's pretty
7 substantial money for insureds.

8 MS. FITZGERALD: That's correct.

9 CHAIRMAN DELUCA: Why would they not
10 be in favor of reimbursement? Tell me.

11 MS. FITZGERALD: I would have to give
12 an opinion on this.

13 CHAIRMAN DELUCA: That would be
14 okay.

15 MS. FITZGERALD: My opinion is
16 because they don't do it and why introduce
17 another cost that they haven't already paid
18 for.

19 CHAIRMAN DELUCA: Could it be that
20 they don't -- could it be the fact that there
21 really is no substantial evidence that it has
22 reduced that --

23 MS. FITZGERALD: But there is
24 substantial --

25 CHAIRMAN DELUCA: -- cost where it is

1 going to save money?

2 MS. FITZGERALD: I believe there is
3 substantial.

4 CHAIRMAN DELUCA: You believe there
5 is?

6 MS. FITZGERALD: There is.

7 CHAIRMAN DELUCA: Okay. Very good.

8 Any other questions?

9 Representative.

10 REPRESENTATIVE NICKOL: Thank you.
11 You indicated that you're typically -- provide
12 60 days of episode care or something, that
13 you're pre-approved for some certain period of
14 time for -- during which you'll provide the
15 home care.

16 MS. FITZGERALD: Correct.

17 REPRESENTATIVE NICKOL: Do you -- I'm
18 curious, you know, following up on the
19 chairman's question about insurance companies,
20 does North Penn VNA charge an insurance
21 company less if they allow you to employ
22 telemedicine and reduce the number of
23 professional nursing visits during that 60
24 days or are your charges the same?

25 MS. FITZGERALD: Well, let me -- let

1 me -- there's a difference between the two
2 insurers that you just referenced. The 60-day
3 episode of care pertains to a traditional
4 Medicare encounter. Okay. That's a Medicare
5 reimbursement.

6 So Medicare provides to the home care
7 agency a dollar amount for us to take care of
8 that patient regardless of how many visits
9 that we have to make or what services we
10 provide or what equipment we bring in.

11 If we are able to reduce the number
12 of nursing visits, yet still provide the same
13 outcome, that is, the patient is discharged to
14 home, goals met, independent and living,
15 Medicare does pay us the same amount.

16 A traditional fee-for-service insurer
17 pays by the visit. They're not charged any
18 more or any less. They only pay for what we
19 provide.

20 REPRESENTATIVE NICKOL: So -- so the
21 companies that we can regulate --

22 MS. FITZGERALD: Correct.

23 REPRESENTATIVE NICKOL: -- would be
24 fee-for-service?

25 MS. FITZGERALD: That's correct.

1 REPRESENTATIVE NICKOL: And so you
2 would charge them -- I'm gathering from what
3 you're saying, if you're employing
4 telemedicine, they would actually benefit
5 because they wouldn't have to pay for as many
6 skilled nursing care visits.

7 MS. FITZGERALD: That's correct.

8 REPRESENTATIVE NICKOL: Or nursing
9 visits.

10 MS. FITZGERALD: That's correct.

11 REPRESENTATIVE NICKOL: Okay. Thank
12 you.

13 CHAIRMAN DELUCA: Representative
14 Cohen.

15 REPRESENTATIVE COHEN: Thank you,
16 Mr. Chairman.

17 Could part of the fear of insurance
18 companies be fears of increased utilization
19 and increased costs of -- of operations as a
20 result of people using telemedicine more than
21 they would use a conventional office visit?

22 MS. FITZGERALD: I don't think that
23 would be the fear. I mean there won't be
24 increased utilization.

25 The technology potentially can be

1 increased and the benefit to the patients will
2 be increased. But you will not see an
3 increased utilization of nursing visits. In
4 fact, it will be the reverse of that.

5 REPRESENTATIVE COHEN: Thank you very
6 much.

7 CHAIRMAN DELUCA: Representative
8 Mensch.

9 REPRESENTATIVE MENSCH: Just help me
10 collect my thought.

11 MS. FITZGERALD: Okay.

12 REPRESENTATIVE MENSCH: Your
13 association, is it for-profit or
14 not-for-profit?

15 MS. FITZGERALD: Not-for-profit.

16 REPRESENTATIVE MENSCH: That's all I
17 needed to know. Thank you.

18 CHAIRMAN DELUCA: Representative
19 Godshall.

20 REPRESENTATIVE GODSHALL: I just
21 wanted to say that I want to thank
22 Ms. Fitzgerald for coming up here today. They
23 operate out of Hatfield Township.

24 MS. FITZGERALD: That's correct.

25 REPRESENTATIVE GODSHALL: Which is

1 the heart of my district, where my office is
2 located.

3 And recently I had a hip replacement
4 this past fall done, and I had a choice of
5 going to a rehabilitation center for a week or
6 two or coming home and using the benefits of
7 the services of the Visiting Nurses
8 Association and -- which I did for
9 approximately a week or so.

10 And I don't know what the savings in
11 dollars would have been, but it would be
12 astronomical in spending that time in a rehab
13 center.

14 So I just want to, again, commend the
15 North Penn Visiting Nurses Association.
16 They've done a great job in our area and
17 they're recognized for the great job they do
18 and I -- all I can say is thank you and
19 welcome to Harrisburg.

20 MS. FITZGERALD: Thank you for your
21 very kind words.

22 CHAIRMAN DELUCA: That's pretty good
23 for coming from Representative Godshall.

24 REPRESENTATIVE GODSHALL: I'm usually
25 on the other side.

1 CHAIRMAN DELUCA: Yeah. You're
2 normally on the other side. So I'm always
3 trying to save you.

4 Thank you.

5 MS. FITZGERALD: Thank you.

6 CHAIRMAN DELUCA: Thank you very
7 much --

8 MS. FITZGERALD: Thank you.

9 CHAIRMAN DELUCA: -- for taking the
10 time to come out.

11 MS. FITZGERALD: Thank you very
12 much.

13 CHAIRMAN DELUCA: The next individual
14 who will be testifying is Larry Light. He's
15 with the Pennsylvania Medical Society.

16 Larry, welcome. Whenever you're
17 ready, Larry.

18 MR. LIGHT: Okay. Thank you. Good
19 morning, Mr. Chairman. I'm here. Roger
20 Mecum, our executive vice president, was
21 slated to be here and could not attend and
22 normally -- Dr. London, our president, was
23 scheduled for surgery today. So I'm here in
24 their stead.

25 As the -- your committee staff

1 suggested, I'm going to dispense with the
2 reading of testimony and just make a couple
3 comments.

4 CHAIRMAN DELUCA: Sure.

5 MR. LIGHT: I want to thank you for
6 holding the hearing, Chairman DeLuca. I want
7 to thank Representative Cohen for introducing
8 the bill.

9 This is legislation that the
10 Pennsylvania Medical Society supports. We
11 agree it will result in lower health care
12 costs.

13 We have -- in our testimony, the one
14 thing we try to highlight, though, is the need
15 to probably expand the bill a little bit more,
16 and it was along the lines of an issue that
17 Representative Mensch brought up, and that is
18 when you have a situation where the telehealth
19 or telemedicine is being provided by someone
20 from out of state.

21 We've been working on legislation
22 like this, mostly in the Senate, for the last
23 couple of sessions. Haven't been as
24 successful with it as we would like. But
25 we're going to persevere.

1 And the -- the trend we were
2 following was to require that when the patient
3 is in Pennsylvania that the health care
4 provider be licensed in Pennsylvania.

5 So if you -- if the -- a lot of this
6 would apply to teleradiology. So if it's
7 farmed out to -- say, those services are being
8 performed by a firm of people, say, in
9 Colorado or another state or even another
10 country, that whoever they're using online, if
11 you will, or through telemedicine or
12 telehealth to provide the services, look at
13 the radiological scans, whatever, that they
14 would -- if a patient is in Pennsylvania and
15 they're providing services to hospitals in
16 Pennsylvania, they're going to have people
17 providing that service who are licensed in
18 Pennsylvania also.

19 And the key thing about this would
20 be, even go back down to the basics of -- if
21 there's a liability issue, there's somebody
22 who has equal coverage as a Pennsylvania
23 licensed physician. So the patient, if
24 there's a problem, they have somewhere to go.
25 If there's a bad situation.

1 So that would be the one thing we
2 would suggest that we would definitely want to
3 look at in the legislation.

4 And I appreciate your earlier
5 question about who is going to make the
6 determination about lowering health care
7 costs. That's not something physicians are
8 necessarily equipped to do and I think that's
9 something we'll have to -- we can work through
10 and figure out a way to handle this.

11 CHAIRMAN DELUCA: Thank you, Larry.
12 Let me ask you, as the doctor testified, he
13 said you'd have to be licensed in
14 Pennsylvania.

15 So what -- are you talking about
16 support -- for the support services for the
17 physician?

18 If the doctor has to be licensed in
19 Pennsylvania, how could they farm that to
20 another state?

21 MR. LIGHT: They don't have to be in
22 Pennsylvania. They just have to have a
23 Pennsylvania license. There are people all
24 over the country who have Pennsylvania
25 licenses but who aren't actually practicing in

1 Pennsylvania.

2 CHAIRMAN DELUCA: Okay. So they
3 could have a license --

4 MR. LIGHT: Yeah.

5 CHAIRMAN DELUCA: -- and not practice
6 in Pennsylvania? Is that what you're saying?

7 MR. LIGHT: Right. But if the
8 patient -- we believe if the patient's in
9 Pennsylvania --

10 CHAIRMAN DELUCA: Physician should be
11 certified. I understand.

12 MR. LIGHT: Yeah. When we did --
13 when we worked on the bill in the Senate, we
14 did have an exemption for -- I think we call
15 it episodic consultation. In other words, the
16 scenario would be something like a specialist,
17 or any physician, it doesn't have to be a
18 particular specialty, wants somebody else to
19 take a look at a case and they call somebody
20 at a -- probably a teaching institution, maybe
21 someone they've worked with before, someone
22 they trained under, and say, here, would you
23 take a look at this? And you send the
24 material out through telemedicine or that kind
25 of a means of transmitting the data and you

1 get a consult, if you will, from that person.

2 If they're not being compensated for
3 it, we didn't -- we understood that they
4 wouldn't have to be licensed in Pennsylvania.
5 But I mean -- now, if they're doing a series
6 of them and they're looking -- and there's --
7 and there's compensation involved, then if the
8 patient is in Pennsylvania at a Pennsylvania
9 hospital or -- or in Pennsylvania, then they
10 should be licensed in PA.

11 CHAIRMAN DELUCA: And I agree.

12 Is there any questions for
13 Mr. Light?

14 Representative.

15 REPRESENTATIVE NICKOL: Just as a
16 follow-up to your comment you just made,
17 Pennsylvania, one of our premier assets are
18 institutions like UPMC and other national
19 renowned medical centers.

20 If we were looking at economic
21 development and the building of a business
22 model based on telemed services, it would seem
23 like we'd be a national center.

24 Would the requirement that -- that we
25 might place on telemed services and

1 reimbursement for those in Pennsylvania, that
2 someone has to be licensed in Pennsylvania,
3 would that not be adopted by other states then
4 and prove a barrier to us providing services
5 from these nationally renowned medical centers
6 in Pennsylvania to patients in other states?

7 MR. LIGHT: I suppose that's
8 possible. It's something we'd have to try to
9 work through. But I think that could become
10 an issue down the road.

11 REPRESENTATIVE NICKOL: Thank you.

12 CHAIRMAN DELUCA: Representative
13 Mensch.

14 REPRESENTATIVE MENSCH: Yeah. Larry,
15 let me follow up with that train of thought.

16 How -- when I'm a doctor in
17 Pennsylvania and -- and -- no. Let me
18 rephrase it.

19 I'm a patient in Pennsylvania and
20 somehow I talk to somebody in Ohio and have a
21 telemed consultancy, how do I know that --
22 they're in Ohio, with the ability of the
23 Internet, when I get -- when I get -- say they
24 prescribe something for me. How do I know?
25 What catching mechanisms are there to -- I

1 mean there's no stamp on the call.

2 MR. LIGHT: Yeah.

3 REPRESENTATIVE MENSCH: They don't
4 really know where it originated or where it
5 terminated.

6 MR. LIGHT: Well, I don't know. I'm
7 not quite sure why that would -- how that
8 circumstance would come about.

9 REPRESENTATIVE MENSCH: I'm not sure
10 either.

11 MR. LIGHT: You know.

12 REPRESENTATIVE MENSCH: But we were
13 talking earlier, you know, about consultants
14 in -- in India or other countries or other
15 states. I'm wondering if and when that
16 actually happens, how do we catch it?

17 MR. LIGHT: My understanding of what
18 we're trying to deal with with the
19 Pennsylvania licensure is a situation where
20 somebody would actually contract with a --
21 with a practice or a firm that provides those
22 services and that they are domiciled out of
23 the state.

24 And we're trying to look at those
25 situations where they're going to be a lot of

1 work.

2 Now, if you're just a patient and
3 you're contacting somebody from out of state
4 on your own behalf, then that, I think, would
5 come under the episodic consultation kind of
6 thing.

7 REPRESENTATIVE MENSCH: All right.

8 Thank you.

9 MR. LIGHT: There's a lot to be
10 worked through here.

11 REPRESENTATIVE MENSCH: Yeah. I see
12 that. Thank you.

13 CHAIRMAN DELUCA: Any other questions
14 for Mr. Light?

15 Representative Cohen.

16 REPRESENTATIVE COHEN: Mr. Chairman,
17 I would just like to thank the Pennsylvania
18 Medical Society for their support of this
19 legislation.

20 And I agree with you conceptually and
21 I look forward to working with you in whatever
22 calls there might be.

23 MR. LIGHT: And we look forward to
24 working with you, Mr. Chairman and Mr. Cohen.

25 CHAIRMAN DELUCA: Larry, let me just

1 ask you one question. Since you said the
2 Pennsylvania Medical Society is in favor of
3 this, what is the position of AMA on this
4 telemedicine?

5 MR. LIGHT: I'd have to get back to
6 you on that. I don't --

7 CHAIRMAN DELUCA: Could you get back
8 to me?

9 MR. LIGHT: Yeah. I'm not sure if
10 they've looked at it.

11 CHAIRMAN DELUCA: There are states
12 that have it?

13 MR. LIGHT: Yeah.

14 CHAIRMAN DELUCA: I certainly would
15 appreciate you finding that out.

16 MR. LIGHT: We'll certainly check
17 their policy.

18 CHAIRMAN DELUCA: Okay. Thank you.

19 The next individual testifying is
20 Joseph Tracy. He's the vice president of the
21 Lehigh Valley Hospital.

22 Welcome, Joe.

23 MR. TRACY: Well, thank you.

24 CHAIRMAN DELUCA: Thanks for taking
25 the time to come here and testify on behalf of

1 this piece of legislation. It's innovative.
2 And I guess it's a piece of legislation you
3 support?

4 MR. TRACY: Yes. We appreciate being
5 here, Chairman DeLuca and Representative Cohen
6 and the committee. It's a great opportunity.

7 Just a little bit of background on
8 myself. I'm Joe Tracy, the vice president for
9 Telehealth Services for the Lehigh Valley
10 Hospital and Health Network in Allentown. I
11 have some side jobs. I'm also chair for the
12 Center for Telehealth and eHealth Law in
13 Washington, D.C.; a member of the Health
14 Information Management Systems Society's
15 Advocacy and Public Policy Steering
16 Committee. I'm also on the policy committee
17 of the American Telemedicine Association.

18 Lots of great questions. So if I
19 could just depart from my testimony, which I
20 have written, and try to address some of the
21 other questions that have been raised.

22 There's actually a sixth state now
23 that has legislated telehealth reimbursement,
24 and that would be Georgia.

25 I've also included in my testimony a

1 table from the Telemedicine Information
2 Exchange that shows commercial insurance
3 carriers that were paying for telehealth in
4 the 50 states, and that's as recent as 2005.

5 In terms of the outsourcing issue on
6 radiology, one of the more prominent groups in
7 that area is NightHawk Radiology. Last I
8 heard from them, they spend about \$65,000 per
9 physician, licensing them in all 50 states and
10 having them privileged and credentialed in the
11 hospitals where they provide service.

12 So they're trying to do the right
13 thing, even though that, you know, these are
14 typically American-trained physicians. They
15 just happen to be residing in places like
16 India and Australia.

17 In terms of your point on infection
18 control, a good point. You know, the new
19 mandates to report hospital-acquired
20 infections here in the state, there is a
21 limited number of infection control
22 specialists in the state. You know, they're
23 just not everywhere. And using these
24 telehealth technologies, as Dr. Watson and the
25 others have described, we can make them a

1 little bit more available for not only helping
2 hospitals and patients but also for the
3 education component in teaching their
4 infection control teams a little bit more in
5 terms of helping on that issue.

6 In terms of Number 3 in the bill,
7 there is Section 7202. I have in my testimony
8 on -- my written testimony on Page 5, I've
9 kind of requested that Number 3 be removed and
10 replaced in terms of adding an evaluation
11 committee, because I don't think, as you heard
12 from the others, that any -- any one
13 individual physician will be able to give you
14 the full costs savings on any given patient
15 because they won't know the history.

16 And -- and I guess in reality the
17 commercial insurance carriers would know how
18 often that patient may have been treated for a
19 condition before they were turned over to a
20 specialist.

21 So I think the commercial insurance
22 carriers would have that very data which you
23 seek. But I'd rather have an independent
24 evaluation team take a look at that.

25 In terms of other licensure issues,

1 my last count, there was about 36 states in
2 the United States that had licensure laws that
3 require full licensure in a state if you were
4 going to treat a patient in that state.

5 So in terms of the other comment, I
6 mean it's just out there and it's -- it's in a
7 lot of state laws. There are a few that have
8 a limited license for telehealth where you can
9 provide a few consultations.

10 I got to tell you, I have one of the
11 greatest jobs in the world because I get to
12 provide technologies that provide access to
13 people that don't generally have access to
14 health care services. So it's really good.

15 Some examples from Lehigh Valley
16 Hospital, to add on to Dr. Watson's, when we
17 use interactive real-time video, one of the
18 most powerful applications that we're working
19 on and that has been used in other states, is
20 to be able to use this technology to care for
21 high-risk pregnancies.

22 Women in that condition don't travel
23 well. It's kind of -- it's sometimes kind of
24 dangerous for them to travel, and we would
25 rather have healthy babies than babies that

1 wind up in the neonatal intensive care unit.

2 And we talk about costs. A couple
3 years ago when I took a look at this for
4 Lehigh Valley, the cost of a baby, on average,
5 winding up in the neonatal intensive care unit
6 was 20 times that of the cost of a normal
7 newborn.

8 We can use interactive video to see
9 ultrasounds in real-time. We can install
10 forward technology to see the still images of
11 those ultrasounds and using this technology
12 the physicians can communicate in real-time
13 with the ultrastenographer's patients' nurses
14 in the remote areas.

15 We also have at Lehigh Valley an
16 advanced ICU, which having been around the
17 country over the last 15 years looking at
18 various telehealth sites, I got to say it's
19 probably one of the most powerful telehealth
20 applications in combination with health
21 information technology that I've ever seen.

22 And I would invite the committee to
23 come and see us, take a look at this, along
24 with the other telehealth applications because
25 sometimes it takes a visual -- sometimes it

1 takes you sitting in front of the system to
2 just see the power of the technology and what
3 it can do for the patients throughout the
4 Commonwealth.

5 And in terms of reimbursement, I got
6 interested in the reimbursement policy back in
7 1997 with the Balanced Budget Act at the
8 federal level, which had some unworkable
9 language in terms of telehealth
10 reimbursement.

11 So I was fortunate enough to draft
12 the language for the Southern Governors
13 Association and Senator Jim Jeffords on Senate
14 Bill 2505, most of which was signed into law
15 in 2000 as part of the Benefit Improvement
16 Protection Act. And it's kind of the Medicare
17 reimbursement that we enjoy today.

18 Also after joining Lehigh Valley
19 Hospital, I'm proud to say that our insurance
20 product, our own insurance plan, does pay for
21 telehealth services.

22 It would be difficult for me to sit
23 here and look at you and look at the
24 commercial insurance carriers and say, please,
25 pay for that -- pay for this if my own plan

1 doesn't. So I'm happy to report that we do
2 pay for telehealth consults.

3 In terms of payer concerns over this,
4 you know, some of them -- a lot of them you've
5 mentioned and I think they're unfounded.

6 There is a concern that increased
7 access equals increased costs. I'm not sure
8 that's quite true. HCFA, back in the early
9 '90s, now CMS, thought that way early on and
10 they were telling the Congressional Budget
11 Office that telehealth would cost billions on
12 the nation's health care system. However,
13 they had no data to back that up.

14 Working with some others across the
15 country, we compiled a grass roots study of
16 utilization of telehealth and that study was
17 used as the Congressional Budget Office basis
18 for scoring Senator Jeffords' bill at only 150
19 million over five years. So significantly
20 less than a billion.

21 Six years has expired since that bill
22 was scored, so we're beyond that five-year
23 period, and Medicare has only spent \$4.2
24 million in terms of telehealth reimbursement
25 or only three percent of CBO's estimate. So

1 in terms of HCFA and CMS's concerns that the
2 budget would be blown over this, that did not
3 prove to be the case.

4 I've also received several letters
5 recently from commercial insurance carriers
6 here in Pennsylvania that basically cite that
7 there's no scientific evidence that telehealth
8 equals that of in-person care.

9 And I -- I have a problem with that.
10 One is scientific evidence and randomized
11 control trials are difficult to do in a
12 environment like this in the real world.

13 We're not testing a drug over many
14 years with many different trials. We're using
15 a communication tool basically to enhance
16 access and provide communication channels for
17 physicians and other providers.

18 And in a randomized control study you
19 usually have an intervention group and control
20 group. I don't think there's a single
21 physician that would withhold a communication
22 service that might save the life of the
23 patient simply because the patient is in a
24 control group.

25 So I wrestle with the fact they're

1 looking for this scientific evidence at that
2 level.

3 There's also inconsistencies in the
4 insurance companies across the country. You
5 will see in that chart in my written testimony
6 that there are many of these insurance
7 companies that are paying in other states,
8 even the ones that aren't legislated; yet
9 they're not paying here in Pennsylvania.

10 So are we so much different here in
11 Pennsylvania that we are -- we need to be a
12 scientific study versus the other states?

13 I think telehealth treats patients
14 the same way regardless of where they live.

15 We're also in a Catch 22 in terms of
16 evaluation and research. One of the barriers,
17 as you heard, to doing, providing the services
18 is reimbursement.

19 If physicians and other providers
20 aren't paid for what they do, they typically
21 don't do it. Unfortunately, if they don't
22 provide the service in this matter, we have
23 nothing to evaluate.

24 So the reimbursement mechanism under
25 this bill is vitally important so that we can

1 begin to gather the data that we need.

2 Other reasons to pay, Aetna and Cigna
3 are both publicizing the fact that they're
4 going to begin reimbursing for e-visits using
5 a product called Relay Health. E-visits can
6 equate to a video camera on your computer. It
7 could also equate to simple e-mail between you
8 and your physician.

9 The Department of Public Welfare here
10 in Pennsylvania has also stepped up, and they
11 are reimbursing for maternal fetal medicine
12 services, as well as for the management of
13 psychotropic medications by psychiatrists.

14 I was also privileged to be on the
15 advisory committee for the Center for
16 Information Technology Leadership report that
17 Dr. Watson mentioned.

18 It -- it does indeed show how we can
19 save a lot of money by using these
20 technologies across the country. And one of
21 the major powerful applications of this is
22 just being able to use our scarce resources
23 and spread them out a little bit across --
24 without having physicians travel. And by
25 that, I mean right now there are currently

1 6,000 board certified intensive care
2 physicians, intensivists in this country. We
3 need 15,000.

4 There's -- there's really simply no
5 other way sometimes than to use this type of
6 technology to provide their expertise in
7 places where it doesn't exist.

8 So I really like the bill. I really
9 appreciate being here today. My testimony, my
10 written testimony, does have a few
11 recommendations for changes. Because I want
12 to ensure that the telehealth encounters and
13 consultations are paid at the same rate as an
14 in-person visit.

15 And I would also suggest that we
16 require all the physicians just to simply
17 document their cases with a GT modifier in
18 front of the billing code, in front of the CPT
19 code. That would be an indication that
20 this -- the encounter was done by telehealth,
21 and it would also be an easy way for insurance
22 companies to go back and extract the data by
23 looking only for the GT codes. So it does --
24 it will help the evaluation process.

25 In summary, you know, telehealth is

1 just a tool to provide care at a distance. It
2 provides the right care, at the right time, at
3 the right place, and at the right cost.

4 And, frankly, an individual's address
5 here in Pennsylvania should not dictate where
6 they can get health care. We should have
7 this -- this bill will take care of that.

8 Again, I invite you to come to see us
9 at Lehigh Valley Hospital. I think a visual
10 and a demonstration would be very helpful for
11 the committee.

12 I can't thank you enough for doing
13 this, and I'd be happy to answer any questions
14 you have.

15 CHAIRMAN DELUCA: Thank you, Joe.
16 And I guess I looked over some of your
17 testimony and I see a lot of states are
18 reimbursing for the Medicaid part of the
19 telehealth. Yet some of the private payers is
20 not.

21 Why would you -- I mean they
22 certainly would have -- if they're reimbursing
23 for Medicaid, they're probably seeing a
24 savings, a cost savings in the Medicaid
25 program.

1 Why would not the insurers take
2 that -- that situation where it's documented
3 that they're saving costs, they start covering
4 that, I see a -- most of it is all Medicaid,
5 there's a few of these are private payers, but
6 I see most of the Medicaid programs are doing
7 it in a lot of these states, but the private
8 payers are not doing it.

9 MR. TRACY: That's correct.

10 CHAIRMAN DELUCA: So I mean why do
11 you believe the insurance carriers couldn't
12 take that data from the Medicaid program, the
13 cost savings, and move it to their own
14 insurance companies and see the cost savings?

15 I mean it has to be a cost savings in
16 the Medicaid programs.

17 MR. TRACY: Yeah. Unfortunately, we
18 go back to the early '90s. Most of the
19 telehealth programs were federally funded
20 projects aimed at very, very rural areas.

21 As a result you're treating a very
22 underserved population of patients with a high
23 preponderance of Medicaid coverage, and I
24 think a lot of state representatives who
25 cover -- you know, have constituents in those

1 areas are -- you know, the major universities
2 that have these programs and other places that
3 have telehealth programs have gone to them
4 with their data and somehow convinced each --
5 each Medicaid program to do -- to provide some
6 reimbursement.

7 And I'll tell you. I don't think
8 they're all the same. DPW here and the
9 Medical Assistance program is going to pay for
10 maternal fetal medicine and the psychiatrist
11 for managing psychotropic medication, but
12 beyond that, those are just going to be a
13 carve-out for now until we can open it up for
14 home care and other specialties.

15 So, you know, it's -- when you look
16 at the map, the Medicaid programs all treat
17 this a little bit differently. And I wish I
18 had an answer.

19 CHAIRMAN DELUCA: Could it be because
20 of the fact that a lot of doctors don't
21 participate in the Medicaid program and they
22 need another way of taking care of the
23 Medicaid population and the poor population?

24 MR. TRACY: Yeah. You know, coming
25 from the University of Missouri, which was a

1 safety net facility, you know, the
2 preponderance of Medicaid cases coming into
3 the university system like that was much
4 higher than -- than anything else.

5 CHAIRMAN DELUCA: Thank you, Joe.

6 Any other questions? Representative
7 Mensch.

8 REPRESENTATIVE MENSCH: Can you
9 differentiate for us e-visits from
10 telemedicine?

11 MR. TRACY: I can in the context of
12 Relay Health because I use that myself. Relay
13 Health is kind of a -- a tool where if I'm
14 really in a non-urgent situation, I'm -- I'm
15 not feeling well, but, you know, I just want a
16 -- I hurt my elbow, I hurt my arm, I want to
17 kind of get a feel for what to do next, I can
18 drop a message into the Relay Health product
19 and it will go to my primary care physician
20 where he'll pick it up, review it, and get
21 back with me.

22 It's not suggested to be used, of
23 course, for urgent cases. And so -- but I
24 believe also Relay Health does have a video
25 component where, if it were possible, I could

1 have a webcam, my physician could have a
2 webcam, and we could actually see each other
3 and have a conversation.

4 There are products like that popping
5 up, and they'll become more prevalent as we
6 move down the road.

7 But in terms of an e-visit, it's in
8 this case almost like an e-mail in a little
9 bit more secure environment.

10 REPRESENTATIVE MENSCH: Is there any
11 prescribing of medications or -- in an
12 e-visit?

13 MR. TRACY: In an e-visit? I have
14 personally not done that. However, I think
15 you can correspond to have your current
16 prescription renewed. Because using Relay
17 Health, you are actually responding with your
18 primary care provider that -- that knows you.

19 Now, there -- the AMA has approved
20 two new codes for providers and physicians
21 where they will allow reimbursement for those
22 types of visits, e-visits. However, it's up
23 to the insurance companies whether or not to
24 actually pay for those.

25 REPRESENTATIVE MENSCH: Thank you

1 very much.

2 CHAIRMAN DELUCA: Representative
3 Boyd.

4 REPRESENTATIVE BOYD: Thank you,
5 Mr. Chairman.

6 I want to go back to something you
7 said in your testimony about -- I believe you
8 said was the Jeffries -- Jeffords'
9 legislation, the federal legislation.

10 You quoted some statistics that
11 were -- that were just incredible about what
12 they perceived the cost of -- can you go back
13 to that and say that again?

14 I don't want to let that slip by.
15 That was huge.

16 MR. TRACY: Okay. I was fortunate
17 enough to be in the right place at the right
18 time. One of my medical directors at the
19 University of Missouri was on Senator
20 Jeffords' majority health staff on the
21 labor -- not labor -- HHS -- Health Education
22 Labor Pensions Committee. So she helped with
23 this legislation, being at his right hand.

24 We put together a -- a bill written
25 pretty much by the grass roots and gave that

1 to Dr. Edison who also worked -- what we wrote
2 and what it looked like when it came back was
3 two different things.

4 But it was then turned over to the
5 Congressional Budget Office and the
6 Congressional Budget Office picked up the
7 phone and called me one day and said, we've
8 got a copy of your report. Can you explain
9 it?

10 Because HCFA then was telling us this
11 was going to cost, you know, a billion dollars
12 or more if we opened the floodgates to access.

13 REPRESENTATIVE BOYD: Can I just stop
14 you? So what you're saying is HCFA was saying
15 if, in fact, we would open up to this
16 e-medicine -- is that the right terminology?

17 MR. TRACY: Or telemedicine.

18 REPRESENTATIVE BOYD: Telemedicine.
19 That the cost borne by who would be billions
20 of dollars?

21 MR. TRACY: By the Medicare trust.

22 REPRESENTATIVE BOYD: Okay. Very
23 good.

24 MR. TRACY: At that point they --
25 they took our study that we did -- because I

1 asked the man, has HCFA been able to give you
2 any data? And they said, no, we don't have
3 any. And I said, I've just given you 5,000
4 cases from across the country, and you can see
5 how this works and what it's going to mean,
6 and I think you can figure out that it's not
7 going to cost billions of dollars.

8 So when they scored the bill or
9 priced it, it came back with a five-year \$150
10 million price tag, which, I guess, in
11 Washington doesn't amount to a whole lot.

12 REPRESENTATIVE BOYD: Okay. And then
13 you said that subsequent to that that there
14 was actual statistics that measured it and it
15 even came in less than the \$150 million that
16 they projected it to be?

17 MR. TRACY: Yeah. Let me just look
18 at the chart real quick. Because I think
19 cite -- we got the -- the Center for
20 Telemedicine and eHealth law got the data
21 from -- from CMS themselves.

22 We had -- we had a few legislators
23 request it. And it came from the CMS Office
24 of Legislation via the Center for Telehealth
25 and eHealth Law that showed they had only

1 spent \$4.2 million of the \$150 million
2 estimate.

3 REPRESENTATIVE BOYD: Over how long a
4 period of time?

5 MR. TRACY: That was over a six --
6 about a six-year period.

7 REPRESENTATIVE BOYD: So just to make
8 it clear, what they projected the cost,
9 billions, after you supplied data, they
10 revised the projection to cost 150 million,
11 over a six-year period of time cost how much?

12 MR. TRACY: 4.2 million.

13 REPRESENTATIVE BOYD: 4.2 million
14 with that?

15 MR. TRACY: Right.

16 REPRESENTATIVE BOYD: Mr. Chairman,
17 we need -- we need to implement this now. I
18 mean -- I mean that's -- that -- that's just
19 phenomenal to have something like that, those
20 statistics.

21 And the reason is because? Why?
22 What do you attribute that to?

23 MR. TRACY: Well, I think telehealth
24 is mainly just a substitute for your
25 in-person -- your in-person visit. Obviously

1 when you look at this data, people aren't
2 leaving their -- you know, they're not leaving
3 their homes, but just when you've now opened
4 up reimbursement for physicians at the
5 Medicare level, they didn't exactly just climb
6 on board and say now I'm going to do a
7 telemedicine practice because I can bill
8 Medicare and I never have to leave my PC and
9 never have to see patients.

10 It doesn't work like that. You know,
11 you -- the providers -- especially on a
12 specialist level, when most of the
13 specialists, you know, are in urban areas,
14 they already have a very, very busy practice.

15 So by -- by granting -- by putting
16 telehealth out there and granting access,
17 which all you're doing is granting access to
18 their existing schedule. You're not --
19 they're not adding additional time just to see
20 telehealth patients, but now they're fitting
21 that patient in from -- from Bradford,
22 Missouri or some other -- Missouri --
23 Pennsylvania into their existing schedule.

24 And as a result, you know, you're
25 really not opening up a brand new schedule for

1 people just to use telehealth.

2 REPRESENTATIVE BOYD: If -- if I
3 understand what you just went through from a
4 statistical cost standpoint, I guess I'm
5 curious.

6 I would think that insurance
7 companies would be almost clamoring to mandate
8 in their provider -- their network, their
9 provider agreements, that where possible the
10 providers would offer, you know, telehealth to
11 reduce their costs.

12 Is that going on anywhere? Is there
13 any network where you see a major provider
14 saying, when possible, you should prescribe
15 tele -- or you should utilize telehealth as
16 opposed to XYZ because it's more cost
17 effective?

18 MR. TRACY: I don't think they're
19 pushing that. I think they're -- as you see
20 in -- in the written testimony in terms of the
21 commercial payers in some of the states, some
22 of them have just recognized what this can do
23 and -- if we can get patients to specialists
24 earlier rather than later.

25 And so some of them in some states

1 have stepped up and agreed to pay for it. You
2 know, I guess as we still -- we still have
3 some convincing here to do in Pennsylvania in
4 order for that occur.

5 And I think we're on the right track
6 right here.

7 REPRESENTATIVE BOYD: And it seems
8 odd to me with -- with what I see going on in
9 terms of the negotiations between the provider
10 networks and the insurance carriers and what
11 reimbursements rates, there's this -- there's
12 this incredible tension to reimburse at cost
13 less, cost less, cost less down to, you know,
14 MA in Pennsylvania is at 20 percent roughly
15 of -- of the charge and that there's this
16 built-in incentive within that environment to
17 lower costs and if this would lower costs that
18 much, I just can't fathom that the
19 practical -- that the marketplace hasn't
20 really kind of ushered that in at this point.

21 I mean I'm -- you know, with respect
22 to the prime sponsor, I'm always suspicions of
23 legislative fixes. I think the market fixes
24 things.

25 Now, that said, I understand that we

1 are legislators and there are times when we
2 need to make laws. And maybe this is one of
3 those times.

4 It just seems odd to me that the
5 insurance marketplace hasn't discovered the
6 potential wonderful savings that they could
7 recognize and then lower premiums for all of
8 us, which is what Chairman DeLuca and I, one
9 of the eight things we always agree on.

10 MR. TRACY: But one of the more
11 interesting little anecdotes that I have, the
12 Governor of Missouri then, when I was there,
13 was Bob Holden, and he funded a great deal of
14 our telehealth network to actually roll this
15 out to all hospitals with the bioterrorism
16 funding and all of the federally qualified
17 health centers in the state.

18 I was with the Governor on one
19 particular visit to a very, very rural area of
20 Missouri, and he actually sat in on a
21 dermatology follow-up case back to the
22 university with the patient.

23 And after exiting the room with the
24 doctor, the doctor just shook his hand and
25 just wouldn't let go, thanking him for putting

1 this technology in place, and then he said,
2 I've been treating this patient for three or
3 four months unsuccessfully and now I've turned
4 this patient over to the dermatologist and in
5 two weeks she's cured.

6 So you got a whole lot of primary
7 care doctors who are very good doctors, but
8 sometimes you just have to see a specialist.

9 And if you turn them -- and that
10 Center for Information Technology report
11 shows, you know, a billion dollar savings
12 figure just in the ability to have this
13 technology to get the patients to specialty
14 care a little bit faster.

15 CHAIRMAN DELUCA: Is that it?

16 REPRESENTATIVE BOYD: Yeah.

17 CHAIRMAN DELUCA: Representative
18 Cohen.

19 REPRESENTATIVE COHEN: Thank you.

20 You testified you got into this at
21 the policy level first in Washington and then
22 you're going to Missouri?

23 MR. TRACY: I was at the University
24 of Missouri when I got an interest in the
25 policy aspect of this.

1 REPRESENTATIVE COHEN: Could you
2 discuss the evolution of the existing program
3 at Lehigh University?

4 MR. TRACY: Yeah. Well, at Lehigh
5 Valley Hospital and Health Network?

6 REPRESENTATIVE COHEN: Lehigh Valley
7 Hospital.

8 MR. TRACY: Their entry into
9 telehealth started with the advanced ICU.
10 This is an advanced ICU where an intensive
11 care physician sits off-site from 7:00 p.m. to
12 7:00 a.m. He or she is flanked by two
13 critical care nurses, and they monitor 128 ICU
14 beds each night.

15 So if you are a patient in one of
16 those ICU beds, all of the monitoring devices
17 that are connected to you are feeding to the
18 electronic medical record once a minute.

19 If anything -- if any one of your
20 clinical indicators goes in a bad direction,
21 the intensivist knows it within one minute.
22 You have access to the packs and all the
23 imaging systems, the lab systems. They have
24 computer physician order entry to get your
25 medications entered quickly.

1 And one of the really nice things, by
2 tying this all together, is that the nurses
3 now in the critical care units have
4 approximately 90 minutes per 12-hour shift in
5 direct patient care time because they're not
6 doing nearly the paperwork that they used to
7 do.

8 So it -- it augments the critical
9 care environment in the daytime. It does
10 wonderful things. It's reduced mortality by
11 five percent in the moderately critically
12 ill. And it has also reduced length of stay
13 by half a day for that same population.

14 So that was their entry into it.
15 Right now we're starting up the maternal fetal
16 medicine services up in the Montage Mountain
17 which is in Moosic, PA.

18 We're working with Good Samaritan
19 Hospital in Pottsville on a trauma program
20 where we're putting a -- our regional burn
21 center out there is using Steorn forward
22 technologies to the EDs where we -- where we
23 work so that burn cases can be triaged,
24 examined, and treatment started earlier,
25 before that patient is transferred to Lehigh

1 Valley or some other burn centers.

2 We do --we also do home health in the
3 same manner that was described with about a
4 150 monitors out there every day taking care
5 of patients with chronic disease.

6 So a lot of activity going on.

7 REPRESENTATIVE COHEN: Thank you very
8 much, Mr. Chairman.

9 CHAIRMAN DELUCA: Representative
10 Nickol.

11 REPRESENTATIVE NICKOL: There seems
12 to me to be different levels of telemedicine
13 and telehealth.

14 Do any states reimburse for an
15 e-visit or if I just send an e-mail to my GP
16 saying Johnny is running a temperature of a
17 101 and has sniffles. What should I do?

18 MR. TRACY: When you say sniggles
19 (sic), are you talking like the Medicaid
20 programs, Medical Assistance programs, are
21 they paying?

22 REPRESENTATIVE NICKOL: Or can the
23 states require commercial insurers to cover?
24 I mean I guess I know what e-mail has done to
25 me in terms of constituent contact.

1 MR. TRACY: Good or bad?

2 REPRESENTATIVE NICKOL: And we talk
3 about utilization being a primary factor in
4 controlling health care and driving health
5 care costs. So what I'm looking to you is,
6 are we -- is this going down to that level
7 where you're -- you're advocating equal
8 reimbursement for me just being a concerned
9 parent and e-mailing my GP as opposed to
10 taking Johnny in to see him, which does this
11 create a barrier to me taking Johnny?

12 MR. TRACY: Well, there's a big
13 debate on the e-visit right now from a
14 standpoint of we see Aetna or Cigna
15 advertising that -- or promoting that they're
16 going to be paying for the e-visits but only
17 with a specified program, pretty much only
18 tied to your -- you know, to your existing
19 primary care provider.

20 But there are others that will argue,
21 well, heck, I can pick up the phone and just
22 call and just call him and it won't cost me
23 anything.

24 There are -- there are companies that
25 you will see coming out that will basically

1 say, well, slide your credit card in the slot
2 and you'll be able to log on and see a doctor
3 of your choice, licensed in that state, and --
4 and will charge the patient directly.

5 And some health plans are
6 beginning -- beyond Cigna and -- and Aetna are
7 also beginning to look at this as a way of
8 care management of existing patients.

9 REPRESENTATIVE NICKOL: Are they
10 charging copayments? I mean right now if I
11 take Johnny to the doctor, I have to pay a \$15
12 copay which does create a barrier as well.

13 MR. TRACY: Right.

14 REPRESENTATIVE NICKOL: I would
15 imagine that if you could put some deterrent
16 in there to make sure it's a serious contact
17 it might control the utilization.

18 MR. TRACY: Right. I believe if the
19 health plans get into this, the copayments
20 will be collected. Even the Med -- even the
21 Medicare program with the telemedicine
22 reimbursement, copays still apply. So I can't
23 imagine that changing.

24 CHAIRMAN DELUCA: Joe, just -- I find
25 it interesting here. I'm looking at the

1 Highmark testimony that they sent us over
2 here, and they do cover radiology, pathology,
3 patient monitoring.

4 But they also do state in here the
5 fact that Highmark has a longstanding
6 tradition of protecting the consumers from
7 treatment methodologies that are not fully
8 proved to be effective.

9 And they say the potential to expose
10 health care consumers to services that could
11 be harmful if not provided during direct,
12 face-to-face contact with their physicians.
13 The broad nature of the bill raises questions
14 not only about the quality of health care, but
15 also costs and medical liability.

16 What do you say to those, to their
17 remarks?

18 MR. TRACY: Well, sitting at Lehigh
19 Valley Hospital, we entertained about two
20 weeks ago five insurance specialists from the
21 Centers for Medicare and Medicaid Services.
22 And during that time they met with four or
23 five chairman of different clinical
24 specialties and chiefs of those specialties.

25 And, you know, I sound like I'm

1 bragging, but Lehigh Valley is recognized as
2 one of the best hospitals in the world. I
3 can't imagine the chiefs and the chairs of
4 those departments wanting to get into
5 telemedicine if it was unsafe and not proven
6 and --

7 CHAIRMAN DELUCA: Well, it's -- if
8 you're saying we're going to save this cost --

9 MR. TRACY: Right.

10 CHAIRMAN DELUCA: -- and you're
11 saying it's safe, you see this Highmark, which
12 has about 75 percent of the market in western
13 Pennsylvania, I'm just wondering, haven't we
14 educated the providers -- I mean the insurance
15 carriers on their savings or are we doing a
16 bad job, are -- not we, because we're not
17 involved with the telemarketing -- telehealth,
18 but are you -- are we -- is the profession out
19 there and this new technology, you're not
20 educating the carriers about this or what?

21 MR. TRACY: I think we can do a
22 better job of that. In fact, right now our
23 medical director of our physician hospital
24 organization is inviting the medical directors
25 in from the private insurance companies for a

1 demonstration, similar to what we gave CMS, so
2 that they can see what we're doing is not only
3 high quality and -- you know, sometimes for
4 most patients this is the difference between
5 care and no care.

6 And if you continue, like that
7 patient in Missouri, to go back to that
8 doctor, being treated over a three- or
9 four-month period unsuccessfully but then
10 within a two-week period being taken care of,
11 you know, you got a lot of costs on the front
12 end that could have been avoided.

13 CHAIRMAN DELUCA: Well, I want to
14 thank you for your testimony. Certainly we
15 look forward to working with you.

16 MR. TRACY: Thank you.

17 CHAIRMAN DELUCA: Thank you very
18 much.

19 Lastly to testify is Martin
20 Ciccocioppo. Is that -- is that correct?

21 MR. CICCOCIOPPO: You got that
22 correct.

23 CHAIRMAN DELUCA: We asked you if
24 that was the correct --

25 MR. CICCOCIOPPO: That is correct,

1 Mr. Chairman.

2 CHAIRMAN DELUCA: All right.

3 Welcome.

4 MR. CICCOCIOPPO: Thank you. And in
5 interest of time, I'll just highlight a few
6 remarks from my written testimony and then be
7 able to take a few questions.

8 Again, my name is Martin
9 Ciccocioppo. I'm the vice president for
10 research for The Hospital and Healthsystem
11 Association of Pennsylvania.

12 I'm also the chairman of the board of
13 Pennsylvania eHealth Initiative. The
14 Pennsylvania eHealth initiative started in
15 2005. It's a broad-based public/private
16 partnership which is committed to fostering
17 the adoption and use of health information
18 technology, electronic medical records, and
19 health information exchange in the
20 Commonwealth.

21 I appreciate the opportunity to
22 present the views of the hospital association
23 on House Bill 1849 and the need to increase
24 the use of health information technology to
25 improve access, quality and affordability of

1 health care.

2 Each year Pennsylvania hospitals and
3 health systems give healing, health, and hope
4 to nearly two million inpatients, 33 million
5 outpatients, five million in emergency room
6 department visits, and the hospitals are
7 committed to the adoption of health
8 information technology to improve the quality
9 of patient care and advance efficiencies in
10 the delivery of care.

11 Pennsylvania hospitals have carved
12 out a leadership position, which you heard
13 from UPMC and Lehigh Valley, in the adoption
14 of health information technology as compared
15 to their peers.

16 Provided with my written testimony is
17 a copy of the report the hospital association
18 prepared last year based on the findings from
19 a national survey that favorably presents the
20 adoption of health information technology to
21 Pennsylvania hospitals when compared to the
22 rest of the country, both in timing -- in
23 terms of adoption, actually user technology,
24 spending on health information technology, and
25 also highlighting, as you might guess, that

1 one of the major barriers to health
2 information technology adoption continues to
3 be the cost of implementation as well as the
4 ongoing hospital operating costs.

5 As you debate requirements around
6 information technology, there are several
7 critical points that must be considered.

8 One: Hospitals aren't
9 interchangeable, as well as physician
10 practices aren't interchangeable.

11 The speed -- the speed of clinical
12 information technology adoption is expected to
13 provide more improvement in the next 20
14 years -- 25 years than has occurred over the
15 last 100 years.

16 The costs to implement health
17 information technology are significant.

18 And we caution against mandating
19 specific information technologies or specific
20 products in favor of allowing the market to
21 evolve and foster the best adoption for
22 providing the right care at the right time for
23 all patients in Pennsylvania.

24 HAP and its member hospitals and
25 health systems applaud the intent of House

1 Bill 1849 as a means of encouraging the
2 adoption and use of health information
3 technology in the form of telehealth to
4 provide greater access to appropriate and
5 necessary, quality, and safe care in
6 Pennsylvania.

7 Health information technology
8 proposes that incorporate -- proposals that
9 incorporate health information technology
10 should recognize that the good of all patients
11 must be a priority;

12 That individual patients must be the
13 core focus of health care -- of the health
14 care system and the implementation and
15 adoption of health information technology;

16 That the health care system must work
17 for all Pennsylvanians;

18 And that the best elements of our
19 health care system must be preserved and
20 enhanced.

21 House Bill 1849 focuses on expanding
22 the use of telehealth in Pennsylvania by
23 requiring insurers to provide for the health
24 care services delivered through telehealth,
25 when appropriate, and when such services can

1 result in lower costs.

2 This legislation is likely to have a
3 limited impact since it does not cover federal
4 programs, such as Medicare, and many private
5 insurers would not be required to follow the
6 requirement since federal law would preempt
7 them from following this state mandate.

8 HAP recommends that the House
9 consider Senate Bill 8 which passed the Senate
10 unanimously in June -- on June 5th of 2007 and
11 would provide for public investment in health
12 information technology.

13 The bill is pending in the House
14 Health and Human Services Committee.

15 In addition, we call your attention
16 to Senate Bill 340. This bill, which was
17 recently approved by the Senate Public Health
18 and Welfare Committee, is similar to House
19 Bill 1849 but it's limited to requiring
20 Medical Assistance payments for telemedicine
21 services.

22 Adoption of these legislative
23 initiatives would help to stimulate the
24 development of health information technology
25 in the Commonwealth.

1 In furtherance of the adoption of
2 health information technology, the
3 Pennsylvania eHealth Initiative was asked by
4 the administration and the Governor's Office
5 of Health Care Reform to investigate the ways
6 in Pennsylvania in which we could foster the
7 adoption of electronic health records and
8 e-prescribing, as well as the health
9 information exchange.

10 I provided the executive summaries of
11 two white papers that were recently delivered
12 to the Governor's Office of Health Care Reform
13 and the administration.

14 Those papers, again, address building
15 a sustainable model for health information
16 exchange in Pennsylvania and establishing
17 widespread adoption of electronic health
18 records and electronic prescribing in
19 Pennsylvania.

20 The executive summary contains an
21 overview of the issues as well as a summary of
22 the recommendations coming out of the papers,
23 which each -- each of which is 30 to 40
24 pages.

25 And I invite you to visit the

1 PAEHI.org website for the full text of those
2 white papers, as well as our strategic plan
3 for implementing or fostering the adoption of
4 electronic health records that means
5 connecting Pennsylvanians for better health.

6 It was issued last spring by the
7 Pennsylvania eHealth Initiative.

8 In summary, HAP and its member
9 hospitals and health systems, as well as the
10 Pennsylvania eHealth Initiative, welcome the
11 opportunity to work with the Administration,
12 the General Assembly, and with other
13 stakeholders on advancing the use of health
14 information technology.

15 Again, I thank you for the
16 opportunity today to present the hospital
17 community's view on health information
18 technology and our commitment to improve
19 health care for the patients we serve.

20 We also appreciate your willingness
21 to engage in a public dialogue, and I will be
22 happy -- more than happy to answer any
23 questions at this time.

24 CHAIRMAN DELUCA: Thank you, Martin.

25 Any questions? I guess you did a

1 good job.

2 MR. CICCOCIOPPO: Okay.

3 CHAIRMAN DELUCA: And appreciate you
4 taking the time to come.

5 MR. CICCOCIOPPO: Very much past
6 lunchtime.

7 CHAIRMAN DELUCA: Well, thank you.
8 Thank you very much.

9 I want to thank all the members for
10 attending the meeting today and certainly the
11 people testifying for taking their time to
12 come here on this innovative idea on
13 telehealth. And this meeting is now
14 adjourned. Thank you.

15 MR. CICCOCIOPPO: Thank you.

16 (The proceedings were concluded at
17 12:14 p.m.)
