

COMMONWEALTH OF PENNSYLVANIA  
HOUSE OF REPRESENTATIVES

HOUSE FINANCE COMMITTEE HEARING

STATE CAPITOL  
IRVIS OFFICE BUILDING  
ROOM G-50  
HARRISBURG, PENNSYLVANIA

TUESDAY, FEBRUARY 2, 2010  
1:08 P.M.

PRESENTATION ON HOUSE BILL 10

BEFORE:

- HONORABLE DAVID K. LEVDANSKY, MAJORITY CHAIRMAN
- HONORABLE JIM COX
- HONORABLE BRIAN L. ELLIS
- HONORABLE FLORINDO J. FABRIZIO
- HONORABLE DAN FRANKEL
- HONORABLE ADAM C. HARRIS
- HONORABLE DAVID R. KESSLER
- HONORABLE RICK MIRABITO
- HONORABLE JOHN E. PALLONE
- HONORABLE MICHAEL PEIFER
- HONORABLE DAVE REED
- HONORABLE SAM ROHRER, MINORITY CHAIRMAN
- HONORABLE CHRIS SAINATO
- HONORABLE TIM SEIP
- HONORABLE JOHN T. YUDICHAK

## P R O C E E D I N G S

1  
2 CHAIRMAN LEVDANSKY: Good afternoon. The  
3 subject of today's committee meeting is House Bill 10,  
4 legislation that pertains to the assessment of property and  
5 whether or not it should include the value of the minerals  
6 that underlie the surface and surface structures. The  
7 issue had been brought to the floor by a 2002 State Supreme  
8 Court ruling in a case brought in Fayette County, whereby  
9 the Court determined that the oil and gas rights were not  
10 to be included as taxable and included in the assessed  
11 valuation of property.

12 That court decision has had an impact on the  
13 various taxing bodies throughout the Commonwealth, taxing  
14 bodies being counties, school districts and local  
15 governments. And in response to that, that court decision,  
16 Representative Bill DeWeese has introduced House Bill 10,  
17 Printer's Number 904, to address this particular issue.  
18 And I would like to invite Representative DeWeese to take a  
19 few moments and share with us his concerns regarding this  
20 issue.

21 REPRESENTATIVE DEWEESE: Thank you,  
22 Mr. Chairman.

23 My name is not Bill Kortz, and I am focused  
24 entirely upon this issue for the afternoon. The fact is  
25 that historically, in settings like Greene County and

1 Fayette County -- and my good friends from IOGA will at  
2 least nod in some affirmation -- my friends from the coal  
3 industry, we have had at least the ability for some  
4 revivification in our rural townships and boroughs and  
5 schools districts because coal has been valued as an  
6 underground mineral resource in school districts like West  
7 Greene or Southeastern Greene or Central Greene and  
8 innumerable other school districts within the Commonwealth  
9 where the beneficiaries of coal is being valued at a  
10 certain assessment level.

11 The history of the natural gas world being  
12 assessed before 2002 will probably be brought out later in  
13 the hearing, but certainly it was advantageous for Henry  
14 Clay Township or Wharton Township or rural townships in  
15 Fayette County to be benefitted from the revenue stream  
16 that would be forthcoming.

17 I've said again and again -- and I'll contain my  
18 remarks to three or four minutes here, but the metal  
19 excreta of the coal industry, whether it was LTV or  
20 Bethlehem Steel or other entities leaving Greene County  
21 specifically or their sister and brother counterparts in  
22 Lackawanna and Luzerne and Schuylkill and the devastation  
23 that was brought in the late 19th and throughout the 20th  
24 century to our rivers and streams and stream banks and the  
25 calm piles and the brick buildings and the perpetual

1 settings of dilapidation when industry would get up and  
2 skedaddle, hither, yither and yawn -- I am not going to mix  
3 the severance tax dialog with the assessment dialogue, but  
4 I will say they are fundamentally in a nexus because these  
5 rural settings have been so devastated historically.

6           And yet in my home area, thanks to the coal  
7 industry, the wonderfully advantageous community of  
8 interest that the coal folks in my 50th Legislative  
9 District in particular and in southwestern Pennsylvania  
10 have offered over the past many years, whether it's the  
11 assessments that the county commissioners are collecting or  
12 whether it's the baseball fields that the young girls can  
13 play on that have been contributed to are vital.

14           And I think that there is a way for this  
15 committee, Honorable Chairman Ledvansky, Honorable Chairman  
16 Rohrer and my colleagues, to work a very, very reasonable  
17 reconstruction of the statute that existed prior to 2002  
18 and also, on a related subject, to look at a very, very  
19 modest severance tax like almost a score of what other  
20 states have throughout the U.S. This is a phenomenal  
21 opportunity for us relative to the Marcellus Shale dynamic.

22           And my closing observations would be that if we  
23 are prudent -- and even my good friend Chairman Ellis, I  
24 think, will potentially be motivated in the final  
25 construction of a statute -- we can realize a very modest

1 stream of revenue from these assessments and hopefully some  
2 day from a severance tax. But if we lose this opportunity  
3 like legislators in the 1890's or 19-teens or 1930's or  
4 1950's or, indeed, in the 1970's, when Joe Jerzack (ph) of  
5 the United Mine Workers -- and Mr. Ellis smiles in assent.  
6 He and I introduced a severance tax on coal. We did not  
7 only not arrive at first base, I don't think we got out of  
8 the batter's box.

9 But the assessment, in conclusion, the  
10 assessment is so much of an opportunity for us to realize  
11 revenue in small rural counties, townships, boroughs,  
12 school districts. And if we don't go too far and we just  
13 focus on a very reasonable level of taxation, like Chairman  
14 Rohrer has discussed in so many other settings, I think  
15 this committee's work can be one of the most invaluable  
16 efforts that we realize between now and November 30.

17 Thank you very much, Mr. Chairman, for the  
18 opportunity to have eight minutes at the microphone.

19 CHAIRMAN LEVDANSKY: Thank you, Representative  
20 DeWeese.

21 Before I call the first panel to testify, let me  
22 start by having members of the Committee identify  
23 themselves by the record starting to my left with Chairman  
24 Rohrer.

25 REPRESENTATIVE ROHRER: Representative Rohrer,

1 Berks County.

2 REPRESENTATIVE HARRIS: Representative Adam  
3 Harris; Juniata, Mifflin and Snyder.

4 REPRESENTATIVE ELLIS: Representative Brian  
5 Ellis, Butler County.

6 REPRESENTATIVE PEIFER: Representative Mike  
7 Peifer; 139th District, which is Wayne, Pike and Monroe  
8 Counties.

9 REPRESENTATIVE FABRIZIO: Flo Fabrizio, Erie  
10 County.

11 REPRESENTATIVE MIRABITO: Rick Mirabito,  
12 Lycoming County.

13 REPRESENTATIVE KESSLER: Dave Kessler, Berks  
14 County.

15 REPRESENTATIVE SAINATO: Chris Sainato, Lawrence  
16 and a small section of Beaver County.

17 REPRESENTATIVE YUDICHAK: John Yudichak,  
18 Luzerne County.

19 REPRESENTATIVE SEIP: Tim Seip, representing  
20 part of Berks and part of Schuylkill County, including Pine  
21 Grove, home of Grover the Groundhog, who tells us we will  
22 have six more weeks of winter.

23 CHAIRMAN LEVDANSKY: Thank you on that wonderful  
24 thought.

25 The first panel are panel people from local

1 government. Let me call up to the front to offer testimony  
2 Mr. Doug Hill, the Executive Director of the County  
3 Commissioners Association of Pennsylvania; Elam Herr, the  
4 Assistant Executive Director of the Pennsylvania State  
5 Association of Township Supervisors; and Ed Troxell, the  
6 Director of Government Affairs for the Pennsylvania State  
7 Association of Boroughs.

8 Welcome, gentlemen.

9 MR. HILL: Thank you, Mr. Chairman, members of  
10 the Committee, and Representative DeWeese, prime sponsor of  
11 today's legislation. I'm Doug Hill, Executive Director of  
12 the County Commissioners Association.

13 And, Mr. Chairman, you introduced the other  
14 members of the panel. I presume we'll each present some  
15 remarks, and then we'll all be happy to take your  
16 questions. I represent the County Commissioners  
17 Association of Pennsylvania, which is a nonprofit,  
18 nonpartisan association that provides legislative training,  
19 insurance, technology, research and other programs on  
20 behalf of all the Commonwealth's 67 counties.

21 And it is a pleasure to appear before you today  
22 to talk about House Bill 10, which would restore the  
23 assessability of oil and gas. And I want to say at the  
24 outset that our testimony is not about the severance tax.  
25 It is not about a new tax or fee. It is not about a

1 separate tax or fee. It's not about all the other issues  
2 related to Marcellus, including economic development,  
3 infrastructure, environment, emergency preparedness and  
4 others. But rather what our testimony is about is simple  
5 equity, and it is about restoration of equity.

6 As was indicated in Representative DeWeese's  
7 opening remarks, what occasions this bill is the 2002  
8 decision of the Pennsylvania Supreme Court in Independent  
9 Oil and Gas et al. versus Fayette County Board of  
10 Assessment, in which the Court ruled that counties did not  
11 have authority to assess oil and gas for property tax  
12 purposes.

13 And I should say at the outset, counties are the  
14 ones responsible for maintenance of the assessment system  
15 on behalf of county, municipal and school governments. The  
16 basis of the Court's decision was simply that it wasn't  
17 enumerated in law, and that's despite the very clear  
18 language in the general county assessment law that  
19 everything is assessable unless specifically exempted by  
20 the General Assembly.

21 I think it's also important to note that the  
22 Court's decision was not on a constitutional issue or an  
23 equity issue, but, again, based exclusively on the point  
24 that there was not clear enumeration in law. And so that's  
25 what House Bill 10 intends to do. By amending the fourth-

1 through eighth-class county assessment law with appropriate  
2 reference to the other classes of counties as well, it  
3 would restore that assessability and restore that equity.

4 I should mention as well, even though we are  
5 having this hearing in the context and in the era, if you  
6 will, of the Marcellus Exploration, our interest in the  
7 restoration and assessability predates that, the Marcellus  
8 play. We actually have been seeking this legislation since  
9 the original court decision in 2002. So I also need to say  
10 clearly that our membership views the industry as an  
11 important industry and that it represents tremendous  
12 opportunities for economic development locally and jobs and  
13 potential growth in the time of an economic downturn.

14 But the benefits are also no different from what  
15 other small businesses and large businesses and industries  
16 bring to the community. What is different is that all of  
17 those businesses are paying their fair share of the local  
18 property tax. The oil and gas industry, because of the  
19 court decision, is not. And so what our intent is is to  
20 restore that assessability, restore that equity and that  
21 parity compared to other businesses and industries.

22 The thing that's important to note is that any  
23 time one segment of the community is exempted from taxes,  
24 that doesn't mean that we reduce services. We don't have  
25 the luxury of reducing services. Those of you that have

1 served in local government know that very well. At the  
2 county level, Children and Youth case load doesn't decrease  
3 just because you don't have the revenues to pay for it.  
4 The criminal case load doesn't decrease because we don't  
5 have the budget capacity. So instead what happens when any  
6 class is exempted from taxation, that means that tax burden  
7 is borne by everyone else.

8           And so this is a matter of equity, not  
9 just -- this is a matter of equity for all the other  
10 property taxpayers. And I should also emphasize it's a  
11 matter of equity for the other mineral interests as well.  
12 Currently under Pennsylvania law, coal, limestone, sand,  
13 any other mineral is assessed for property tax purposes and  
14 is paying its fair share. So what we are looking for is a  
15 restoration.

16           Now, I have to emphasize as well that there is a  
17 differentiation between the producer's interest and the  
18 landowner's interest because the question we often get is  
19 who does this fall back against. When a property goes into  
20 production, or for that matter, when a lease is executed to  
21 provide a right to assess that property for production,  
22 that either, by the lease or by an actual transfer of deed,  
23 severs the right for the mineral interest; and that mineral  
24 interest then gains a value because it is now accessible  
25 for extraction.

1           And so a property right attends to the lease or  
2 the transfer, and a value attends to that as well, an  
3 increase in the value of the property. When the property  
4 assessment roll is done, there is a value assessed to the  
5 surface rights of the property, and that's the landowner,  
6 the traditional landowner. And then there's a separate  
7 parcel, if you will, created for the subsurface rights.  
8 And that is assessed separately, and whoever controls those  
9 subsurface rights is the person or entity who gets the  
10 property tax bill.

11           Now, the industry has called property tax  
12 assessment unnecessary and that the industry has no impact  
13 on local government or nominal impact. I think you all can  
14 understand very easily when you see 40 trucks moving frac  
15 water that there is very clearly an impact on municipal  
16 roads, and my colleagues will testify about that more  
17 later. But there's also an impact at the county level,  
18 and, in fact, in many ways it's peculiar to this industry  
19 because a lot of the workforce until now and, for that  
20 matter, in the foreseeable future, is drawn from out of  
21 state.

22           And what we are seeing at the county level is,  
23 in addition to the effects on our county bridges, we're  
24 also seeing impacts on our social services and human  
25 services systems. We see -- and by the way, I don't mean

1 to imply that these out-of-state workers are any different  
2 from the regular population, that they're any worse or  
3 they're a different kind of person or anything like that,  
4 but rather proportionally, people coming in from out of  
5 state also have their share of people who have problems  
6 that they bring with them.

7           We have already seen Children and Youth issues,  
8 Domestic Relation issues, criminal justice issues. And in  
9 fact, for that matter, what we're finding now is if they  
10 come in from out of state and they're on probation or  
11 patrol, under the interstate agreements, they fall into  
12 county and state probation and patrol systems, and we pick  
13 up that responsibility.

14           There are other effects at the county level as  
15 well. Counties are responsible for emergency management,  
16 both response and for planning, and emergency management  
17 planning means, for example, we're assigning discreet  
18 addresses to each of these well sites; so that if there's  
19 an incident, we know from our locator systems how to  
20 respond. Similarly, we're responsible at the county level  
21 for doing hazardous materials emergency response plans.

22           And whether you classify frac water as a  
23 hazardous material or not, any type of industrial use  
24 requires us to at least take it into account as a part of  
25 our hazardous materials planning. Even in the Recorder of

1 Deeds office, we're seeing an impact. And in particular,  
2 if you look at some of our smaller counties in the  
3 northeast, northeastern part of state, they've extended  
4 office hours; they've hired in new employees. We even have  
5 a couple counties who have given a handful of trusted  
6 attorneys extra keys to the courthouse, so, you know, just  
7 do your deed search until you're finished and then lock the  
8 door when you leave.

9           So there are a number of impacts other than the  
10 ones we see very easily on the impacts of the roads. But  
11 all that aside, the fundamental basis of a property tax  
12 system is that everyone who owns property, whether that's  
13 an individual, a store, a mineral producer, a power plant  
14 or a factory, has some obligation, is a member of the  
15 community and has some obligation to help support that  
16 community.

17           So a property tax is not a service fee, per se,  
18 but rather a property tax is imposed without regard to the  
19 level of service use, but rather recognizes that we're all  
20 part of a community together and this is one means of  
21 apportioning the share of the cost of providing services to  
22 everyone in the community. A couple other points to make,  
23 industries argued that few counties were assessing oil and  
24 gas prior to the 2002 decision.

25           In fact, the ability to do so exists we know

1 from case law, at least going back to the early 1900's, if  
2 not before. The reason it was not significant on the books  
3 around the turn of this century is that most of our oil and  
4 gas wells were, I won't say depleted, but at least were  
5 producing it at moderate levels or on the down side of  
6 their production scale. And so the amounts were not  
7 significant, and more to the point, we didn't have clear  
8 technologies on how we would do that assessment.

9           However, in the last couple decades of 1900's,  
10 we developed some newer methodologies, very much akin to  
11 what we do for coal and other minerals, that we were  
12 beginning to apply to the oil and gas wells. And that  
13 resulted in higher values for those properties, but it was  
14 a fair value because it's based on potential income. And  
15 similarly -- and we think, in fact, that might be part of  
16 the reason that spurred the original litigation that led to  
17 the court decision.

18           At the time of the litigation, about half the  
19 counties had implemented these new technologies, and most  
20 of the remainder were in the process of doing so. And so  
21 while it is accurate to say the amount of revenue, the  
22 amount of assessed value for these properties were  
23 relatively nominal prior to the court decision, that's  
24 true; but moving forward, we are putting in place much  
25 better means to determine the values.

1 I should also mention, property assessment has a  
2 number of different components. The easiest methodology  
3 that everyone, at least the one that people understand the  
4 easiest is comparable sales. So if you have a residential  
5 property and it sells for this and most of the houses in  
6 your neighborhood sell for that, then that's a fair means  
7 of assessing the value for your property.

8 However, not every property fits easily into  
9 that categorization. So under Pennsylvania law, the other  
10 two methodologies that we use are replacement costs or  
11 what's called the income approach. And so if you look at  
12 oil and gas, you don't have comparable sales; you don't  
13 have a replacement value, but you do have an income  
14 approach. And the income approach is what's most typically  
15 used for commercial facilities, and it is what is used for  
16 all of the other mineral types of production.

17 In practice, the way the assessment is done is  
18 to develop a table of potential value of the resource, and  
19 then it's done actually as a depreciation table because we  
20 know value's going to decline over time as the resource is  
21 extracted. Typically, we do a five- to ten-year table, and  
22 then that's renewed every five to ten years after that. So  
23 there is a discrete value attached, but it does take into  
24 account the probable declining value of the property, or of  
25 the resource rather.

1           The industry has also suggested that just doing  
2 the evaluation is an expensive process. And it can be  
3 because, as I said, this isn't just a simple comparison of  
4 comparable sales, but rather it does involve some  
5 calculation. It does involve development of tables and all  
6 the rest, and so it can be a little bit more expensive.  
7 However, you've never given us the discretion before to  
8 say, well, this particular class of properties is hard or  
9 expensive to assess and so you don't have to do it.

10           Instead, we have to go out and hire the special  
11 assessors we might need. For example, most counties can do  
12 an assessment of residential real estate. Most counties  
13 can do assessment of open space. I don't know of many, if  
14 any counties that have someone on staff who can do a  
15 professional assessment of a power generation station, and  
16 so we hire someone in to do that.

17           We would be doing a similar thing for oil and  
18 gas assessment, and that's primarily -- most of that cost,  
19 like a full scale reassessment, most of that cost is the  
20 up-front cost the first time you do it. Maintenance of the  
21 value after that is much less expensive. The other concern  
22 that's been raised is that if we put in place this -- if we  
23 restore assessability, that we're going to drive the  
24 industry away.

25           And I think a fair comparison is to take a look

1 at other industries we try to attract. If you're trying to  
2 attract an automobile manufacturing plant, well, yeah,  
3 certainly they're going to take a look at the tax  
4 incentives that are available and they're going to compare  
5 that in an open marketplace to the tax incentives available  
6 in North Carolina or Tennessee or whatever and they're  
7 going to make a decision on that basis.

8 The difference here is the gas is fixed to that  
9 property, and so ultimately if they want the resource, they  
10 aren't going to go to a neighboring state and throw a  
11 horizontal well clear into Pennsylvania to do that. This  
12 is -- it's fixed here, and so the industry will make access  
13 to that resource. It may be a little bit slower over time,  
14 but ultimately, the value of the resource is still there.

15 And, in fact, from everything we've seen, their  
16 interest in assessing a resource is much more based on what  
17 the market value is of the gas itself rather than the  
18 incidental costs, particularly like the costs that  
19 restoration of property tax assessability would add. We've  
20 also heard arguments by the industry that they pay taxes  
21 already, and, in fact, they even claim -- well, they claim  
22 the corporate taxes justifiably, but they're even claiming,  
23 well, our employees pay the local income tax.

24 Well, that may be true, but that's also true of  
25 any other industry in Pennsylvania. The difference is all

1 those other industries also pay the property tax as well.  
2 In fact, there are a couple unique issues with this  
3 industry. I mentioned earlier the number of out-of-state  
4 employees that the industry relies upon. If the home state  
5 of those employees has a reciprocity agreement with  
6 Pennsylvania, then the local income tax goes to their home  
7 municipality. It's not paid locally.

8           So even that is less. And then one other point  
9 for that matter, because of the number of out-of-state  
10 employees -- and this is particularly an issue in the  
11 northern tier -- the companies have leased hotels, motels  
12 for a long term. And if you recall, under Pennsylvania  
13 law, neither the state nor the county receives a hotel tax  
14 if a stay is more than 30 days. It's no longer considered  
15 a transient rental, and so it's exempted from the hotel  
16 tax.

          So we're even losing revenue from that  
17 perspective, and as our tourism industry, we're also losing  
18 available beds to bring the tourists through with all the  
19 other economic opportunity that comes with them. I do want  
20 to turn just briefly to the separate issue of severance  
21 tax. I know that's been a matter of discussion of this  
22 committee, and you've moved the legislation already on that  
23 point.

24           I want to emphasize for the record that our  
25 association does not have a position on the severance tax

1 per se, that is, whether it should be levied or not. The  
2 only position that we do have is that if it is levied, that  
3 there should be some share for county and municipal  
4 government as well as for other appropriate environmental  
5 purposes, including conservation districts, the  
6 Environmental Stewardship Fund and Growing Greener. With  
7 that, I think I will turn the microphones over to my  
8 colleagues to make a few remarks, and then we'll be pleased  
9 to take your questions.

10 MR. HERR: Thank you, Mr. Chairman, and  
11 Representative Rohrer.

12 My name is Elam Herr. I'm Assistant Executive  
13 Director for Township Supervisors Association. And you  
14 have a copy of my testimony in front of you, so I will  
15 paraphrase. And what I will say today will be even cut  
16 shorter because a lot of what Doug has already said, we go  
17 along with wholeheartedly.

18 Just so you know, my membership represents about  
19 90 percent of the land mass in Pennsylvania, so the  
20 majority of wells are in my members' townships. So we are  
21 here to stipulate and state clearly that we are in support  
22 of House Bill 10. I will also say at this time, our  
23 position differs a little bit than Doug on the severance  
24 tax in that we do support a severance tax, but that is  
25 separate for another day, and I will not discuss that issue

1 here today.

2           What I want to reinforce, again, following up  
3 with what Doug had said, is that we're looking at equity in  
4 restoring some fairness to the property tax system.  
5 Realize that we do not do assessments on property. That is  
6 the county's function. What we do is place our millage on  
7 that assessment that is levied, so we're not going to get  
8 into the actual comments about how minerals are assessed.

9           But we do feel that since coal and other  
10 minerals are presently being assessed for property tax  
11 purposes, that counties should have that ability to place  
12 those assessments on it and we should have the ability to  
13 levy millage on that figure. Again, it's a fairness issue.  
14 We have been taxing coal and other minerals for years.  
15 It's only been with the court case that Doug referenced  
16 back in 2002 that the taxing of gas and oil has been  
17 removed from our abilities.

18           Realize one of the other things that Doug did  
19 say, that -- actually two things that Doug did say was that  
20 if you take any entity out of the tax mix, somebody else is  
21 picking up the cost. Our municipalities, counties have  
22 some fixed costs that have to be paid on a monthly basis  
23 the same as everyone else. We have to raise the revenues.  
24 If one entity is removed, then the rest of the taxpayers in  
25 that municipality are going to pay higher taxes.

1           And, again, you get back to the fairness issue.

2           The other thing that Doug did bring out is that  
3 literally with this industry -- and, again, it goes beyond  
4 with the Marcellus Shale. But that's where we're seeing  
5 now the biggest effects on our municipalities, is that  
6 local, the governments are not seeing any taxes or revenues  
7 coming in from that employment. Doug mentioned some of the  
8 effects that we see. We have one municipality in the  
9 northern tier in one day had over 300 trucks carrying water  
10 to the site.

11           Our townships have taken the position that this  
12 is a viable activity. They support the gas drilling  
13 operations within the Commonwealth, but with that being  
14 said, they also say that their citizens should not have to  
15 foot the bill for this activity to take place. Think about  
16 this right now: We have been told that, from just the  
17 Marcellus Shale, that it's \$10 to \$20 billion over several  
18 years. The latest report says that it's approaching over  
19 \$1 trillion that potentially will come out of the ground.

20           And if you think about it, recently Exxon,  
21 Mobile has gotten into the realm of participating. That is  
22 a company that would not have come into this activity if  
23 they did not see a viable end result or return on their  
24 investments. So with that being said, if there is that  
25 type of activity going on, citizens within the township,

1 citizens within the boroughs and the counties should be  
2 able to receive some of the benefits from it.

3           Some of the problems need to be addressed, and,  
4 again, with Marcellus Shale, we're seeing the biggest  
5 problem. It's things that you see very easily, damage to  
6 roads that are out there and activity that has to be taken  
7 care of. Again, I will say today that the entities that  
8 are out there have been working with our members to repair  
9 the damage that they are doing, but it's still a major  
10 problem. And if this industry takes off as the economy  
11 improves, the potential damage will go even higher.

12           Water well contamination and environmental  
13 damage, again, this is something that our members are  
14 seeing and hearing from their constituents that they are  
15 concerned that with the potential for increase in drilling,  
16 that environmental problems will result. And, again, if  
17 you're living on a well, which a lot of rural Pennsylvania  
18 is, you do not want something to happen that's going to  
19 take away your water supply. Presently, laws say that the  
20 entity that destroys a well must supply you with potable  
21 water.

22           The problem is, how long do you want to go with  
23 water buffalos sitting in your driveway until a  
24 municipality will end up having to put in some type of  
25 water system? Treatment of waste water, that is an issue

1 that has to be addressed because, again, if the waste water  
2 is not properly taken care of, there will be a potential  
3 problem of water getting back into the ground water, which  
4 results back into the drinking water supplies. And  
5 finally, one of the issues that you have to take into  
6 consideration -- and, again, Doug brought this  
7 up -- emergency management.

8           Although our volunteers out there on emergency  
9 management are not going to be called in to take care of  
10 well fires or anything like this -- and heaven help us, I  
11 hope we never have a well fire in Pennsylvania -- they will  
12 be responsible for doing other types of activities.  
13 Funding needs to be provided so they can take care of those  
14 responsibilities. There is a lot of other information  
15 within the testimony that I've given, that I've presented  
16 to you. You know, we'll be able to answer any questions  
17 you have.

18           All I would like to end up with is following up  
19 with what Doug said is that this is an equity issue. We  
20 feel that this industry, as well as the other mineral  
21 industries, should be paying their fair share so that the  
22 citizens of our communities are not burdened with the end  
23 result of this activity. And thank you.

24           CHAIRMAN LEVDANSKY: Thank you.

25           Mr. Troxell?

1 MR. TROXELL: Yes. Good afternoon, chairman  
2 Ledvansky, Chairman Rohrer, and members of the Committee.  
3 Thanks so much for having us up here to speak with you a  
4 little bit about House Bill 10 that we're looking at today.  
5 I'm Ed Troxell. I'm the Director of Government Affairs  
6 with the Boroughs Association. We represent over 950-plus  
7 borough communities throughout the Commonwealth.

8 I'm just going to skim over my testimony, even  
9 ad lib a bit from it because I want to thank my esteemed  
10 colleagues here who really covered a lot of the bases. And  
11 I'm sure questions are probably what the Committee has, so  
12 I'm going to work through it real quick and so we can get  
13 to some questions. Basically though what I'd like to put  
14 out there is that the Boroughs Association is in support of  
15 House Bill 10.

16 We do see it as an equity issue. We actually  
17 participated in the press conference, the media event with  
18 Representative DeWeese many months ago supporting the bill.  
19 However, also as Elam alluded to, we do support a severance  
20 tax in the Association. And what we would like to see is  
21 an ideal way to distribute revenues to communities that are  
22 impacted and those who are within the region. We  
23 understand that the assessment aspect that we're looking at  
24 in 10 deals more or less on a focus basis.

25 We're looking at something a little more

1 regional that would manifest itself preferably to a  
2 severance tax. Also, some of the things that my folks have  
3 to deal with are the trucks that come through our  
4 communities, are the emergency services that our fire and  
5 our police have to respond to, a lot of the things that the  
6 townships have already spoken to you about.

7 But I guess what I'd really like to close  
8 with -- and I guess it will really probably raise some  
9 flags in the room, but I'm just going to have to share it  
10 with you, is I have a little borough who suffered at the  
11 hands of another energy king, when coal was king. And to  
12 this day, Centralia Borough is still facing the impacts of  
13 what took place at that time.

14 So what we want to do as an association is  
15 protect our communities, protect our residents, not leave a  
16 heritage behind that would damage them, but leave a  
17 heritage to them that would actually be a blessing to the  
18 folks that live within those communities and throughout the  
19 Commonwealth. Thank you.

20 CHAIRMAN LEVDANSKY: Thank you, Mr. Troxell.

21 Before I ask members for questions, I just want  
22 to note the presence of Representative John Pallone from  
23 Westmoreland and Armstrong Counties and Jim Cox from Berks  
24 County. Thanks for being here.

25 Before I turn to the members for questions, let

1 me just make it clear the severance tax issue. I've been  
2 involved in that. I've had discussions with all of you and  
3 others in the room, and that is an issue that we'll deal  
4 with at another point in time. But I'd just appreciate it  
5 if we could keep our focus on House Bill 10.

6           And to that extent, Mr. Troxell, your first  
7 three paragraphs in your written presentation really do a  
8 really good job of summarizing the key issue of how the law  
9 was being implemented prior to the court case of 2002 and  
10 what the court case has meant relative to the application  
11 of the property tax system since then.

12           So, you know, I would appreciate it if members  
13 could, you know, if we could get back to House Bill 10, and  
14 the contents and questions should reflect that legislation,  
15 not the broader issue of the severance tax. If we did  
16 that, trust me, we would be here more than just this  
17 afternoon. We'd be here for a couple more days having a  
18 hearing on all those issues. So not that I don't think and  
19 recognize it's important, but I'd like to try to keep the  
20 focus to House Bill 10.

21           With that, any questions from the members?

22           Representative Ellis?

23           REPRESENTATIVE ELLIS: Thank you, Chairman  
24 Levdansky, and if I could just ask a real quick question of  
25 Mr. Herr. In your testimony -- obviously we are at what

1 many people in Pennsylvania are very excited at the  
2 beginning of an industry. And I'm not going to ask about  
3 the severance tax, but it does play into this piece of  
4 legislation. But I just want you to clear up a few things  
5 for me. You suggested that the concerns were water well  
6 contamination and emergency management and the damage to  
7 roads and road bonding.

8           Obviously, those are all things that I believe  
9 the industry is mindful of. Can you give me specific  
10 townships where these instances were not -- either they did  
11 occur and weren't rectified and this assessment would have  
12 created a different scenario where these problems wouldn't  
13 have occurred?

14           MR. HERR: This legislation wouldn't have  
15 changed potential problems that would have happened, but it  
16 would have given municipalities some additional revenue to  
17 address some of the issues. We had a board meeting last  
18 week. A board member from Bradford County has said  
19 that -- it was either November or December of 2009 -- over  
20 400 incidents happened within the county, Bradford, that  
21 ranged from traffic accidents to other types of incidents  
22 with potential drilling that are related to gas production.

23           REPRESENTATIVE ELLIS: Were any of those  
24 specifically water well contamination or environmental  
25 damage because I'm just trying to understand because I have

1 not heard of this mass water well contamination or  
2 environmental damage? And I just wanted to be sure because  
3 we are experiencing some drilling and some permitting in  
4 Butler County, and, you know, certainly it's an important  
5 issue to me back west where we're just at the start. We're  
6 not at the Bradford levels, but eventually we hope to get  
7 somewhere into that level where the jobs are coming freely  
8 into Butler County as well.

9 MR. HERR: As far as water well contamination, I  
10 have not heard of any specific yet where they -- but the  
11 concern has been raised because of some leaks either during  
12 the drilling process or after with the waste water that has  
13 come out. There have been some environmental degradation.  
14 I can get you that information from our board member from  
15 Bradford County with a list.

16 REPRESENTATIVE ELLIS: I would appreciate that,  
17 and then just specifically too, have you seen an incidence  
18 where the roads were damaged and there was not adequate  
19 bonding to repair them and the industry didn't work with  
20 the local municipalities to make sure that they were doing  
21 the right thing?

22 MR. HERR: At the present time, the industry is  
23 very cooperative with our municipalities. The industry, at  
24 the present time, also would rather enter into agreements  
25 to try to correct any damage that's done. In the cases

1 that we have heard, they have fulfilled those obligations.  
2 Our concern is, as this industry takes off, others will get  
3 into the operation and may not be as financially well off  
4 as the industry that's there today and we will need  
5 something to take care of the bonding.

6 Bonding, right now, if you have a dirt road, the  
7 max you can bond the road for is \$6 thousand. If it's hard  
8 covered, which in most cases in our townships, it would be  
9 blacktop, you can get 12,500. A road that was done in  
10 Blair County, 2008, which the industry did supply the money  
11 for, was \$126 thousand to redo the road. What we're saying  
12 is, you know, if a municipality even gets the bond without  
13 additional revenues that they're taking out of their  
14 general fund, they can't repair the roads to what their  
15 citizens are looking for.

16 MR. HILL: If I could respond briefly as well,  
17 from the county perspective, this is an issue that, while  
18 the roads are an issue for the counties, bridges are, this  
19 is an issue that we've discussed with the industry as well.  
20 Anecdotally, at least from my members, they said that the  
21 industry has been very cooperative with them, and to a  
22 degree, has been willing to step forward, put additional  
23 money in.

24 And my members tell me -- now, the industry  
25 might have a different perspective, but what my members

1 tell me is, in their discussions with the industry, they've  
2 said, well, number one, we had anticipated some local  
3 taxation in our business models and we get here and we find  
4 there isn't any, so that --

5 REPRESENTATIVE ELLIS: Which specific companies  
6 asked you, said that they anticipated a tax in their  
7 business model?

8 MR. HILL: I would have to find out from --

9 REPRESENTATIVE ELLIS: If you could find that  
10 out for me, I'd greatly appreciate it.

11 MR. HILL: I'd be happy to do that, but the  
12 bottom line for our folks is that while that goodwill does  
13 exist and they have good working relationships now, if you  
14 get a company like Exxon -- and I'm not casting aspersions,  
15 but a larger company that might not have the same community  
16 interest or might not have the same business model, you  
17 really don't want to rely on an ad hoc system of some kind  
18 to prepare for the long term needs. REPRESENTATIVE

19 ELLIS: Thank you very much, Mr. Chairman.

20 CHAIRMAN LEVDANSKY: Thank you.

21 Representative Peifer?

22 REPRESENTATIVE PEIFER: Thank you, Mr. Chairman.

23 Mr. Hill, I'm just trying to get my arms around  
24 House Bill 10 and the way the law was read before 2002.  
25 You would go and assess the property, a well head, and we

1 don't have -- you know, we don't use comparable sales; we  
2 don't use replacement value. We actually use income  
3 approach, which tends me to believe it's similar to a  
4 severance tax, correct, because that's the income approach  
5 on a severance tax?

6 MR. HILL: No, it's not. It's not the same  
7 thing. The income approach is, as I mention in my  
8 testimony, the income approach is what we would typically  
9 use, what we now typically use in something like a  
10 commercial facility or an industrial facility where you  
11 don't have comparable sales, you don't have a replacement  
12 value. And so we use statistical information that's  
13 furnished by the company, information that's available from  
14 the lease and other sources.

15 We develop a depreciation table on what might be  
16 expected to be derived from the income on that well head  
17 and then develop the table which shows the assessed value.  
18 That -- and as I say, that is comparable to what we do with  
19 commercial properties.

20 If you have two strip malls, two strip shopping  
21 centers, and this one has higher-end retailers and this one  
22 has lower-end retailers, the assessed value is going to be  
23 higher over here because of the income that's derived  
24 compared to this one. And the notion is the same. When  
25 you have a resource that can be extracted and you have

1 projections of what that extraction can be, then you can  
2 attach a value, an income value to that.

3 REPRESENTATIVE PEIFER: So determining an  
4 assessed value in your mind isn't that difficult basically.  
5 I mean, it is -- I mean, in my eyes, it seems very  
6 difficult to do what you're saying. I mean, you could  
7 argue, yes, we have name retail stores or we don't have  
8 name retail stores; I have a well that's producing or I  
9 have a well that's not producing. I mean, it just seems  
10 very difficult to determine that assessed value.

11 MR. HILL: Number one, it's not impossible to  
12 do. I, as I suggested in my testimony, most of the time, a  
13 county would be required to bring in an outside consultant  
14 to get the system set up and to attach the initial values.  
15 Once it's in place, it's something that we'd be able to do  
16 largely in-house; second -- this is probably the most  
17 important -- the methodology that we are using is the same  
18 methodology that's used in other states where they use,  
19 have assessed values for the oil and gas. Texas is one;  
20 West Virginia's another.

21 REPRESENTATIVE PEIFER: My second question then  
22 has to do with the way the millage is split then. Would  
23 the millage be split the way it is existing in that county  
24 now?

25 MR. HILL: I have to be very clear. This is not

1 a separate tax. This is simply to add them to the  
2 assessment roll the same as the shopping center is, the  
3 same as the farm, the same as the residential property is.  
4 So there's not a separate millage. There's nothing else  
5 there, so --

6 REPRESENTATIVE PEIFER: So the county, the  
7 school and township or borough splits would be the same  
8 that's actually there existing now?

9 MR. HILL: They just get an assessment bill  
10 along with all the other properties with the millage  
11 attached based on assessed value.

12 REPRESENTATIVE PEIFER: With the same  
13 distribution of millage?

14 MR. HILL: Right, because we can't levy a  
15 different millage against the different class of property.  
16 They go onto a single assessment roll, and that's the  
17 millage that's levied against them.

18 REPRESENTATIVE PEIFER: What about the  
19 Commonwealth? Would the Commonwealth receive any of this  
20 money?

21 MR. HILL: No. The Commonwealth doesn't have a  
22 property tax.

23 REPRESENTATIVE PEIFER: Okay. Thank you.

24 Thank you, Mr. Chairman.

25 CHAIRMAN LEVDANSKY: Thank you.

1 Representative Cox?

2 REPRESENTATIVE COX: Thank you, Mr. Chairman.

3 Kind of in honor of the prime sponsor of this  
4 bill, I'd like to start off with, that which we call a rose  
5 by any other name would smell as sweet. I look at this,  
6 and I call this a severance tax. I know the Chairman said  
7 we're not talking about a severance tax, but everything I'm  
8 looking at here is saying this is a severance tax. And yet  
9 we're trying to say, we're trying to call it anything other  
10 than a severance tax just to avoid the political flurry  
11 that might follow.

12 I guess regardless of what we call it, I have a  
13 couple of questions that I'd really like to get a handle  
14 on, and that is the nature of what we're trying to tax  
15 here. I'm not an expert in these areas, but my  
16 understanding of it is that natural gas can flow pretty  
17 freely from one area to another depending on the geologic  
18 formations that surround it. So there's a fluid nature of  
19 it.

20 It may move from one parcel of land to another.  
21 It may move small distances or large distances depending on  
22 what it's up against. So that's one aspect of it, and the  
23 other aspect of it is just the fluid nature of the market.  
24 Gas may be worth, you know, a set amount one day and  
25 greatly increase or decrease the following day or the

1 following weeks, and yet we're going to tax a solid -- you  
2 know, we're going to put a tax on here and say this is what  
3 is going to be taxed. How are we going to account for both  
4 the fluid nature of the gas itself and also the fluid  
5 nature of the market? How are we going to make sure that,  
6 if this were to go through, that we're taxing fairly?

7 MR. HILL: Sure. And, actually, I guess there's  
8 three different questions to respond to. The first is a  
9 tax by any other name. This is not a severance tax, but  
10 rather -- I mean, to call this a severance tax would be the  
11 same as calling an income-based approach valuation of a  
12 commercial property an income tax. It's not, but rather  
13 it's the property has an intended value because of what  
14 it's capable of producing.

15 So when we develop the depreciation tables, it's  
16 not based on the actual extractions, but rather based on  
17 the available resource and the value that that has if it  
18 were to be sold on the market, either sold by extraction or  
19 sold to another company that wants to be able to extract.  
20 So it is different than a severance tax very distinctly.

21 Second, if I can use Representative DeWeese's  
22 phrase, the term you're talking about, migration, is called  
23 fugacious. It can migrate from property to property.  
24 Pennsylvania though -- and the industry can give you a  
25 little more clarity on this when they testify, but

1 Pennsylvania's what's called an extraction state. And so  
2 the value is based on the piece of property from which you  
3 extract it rather than what it underlies.

4 Now, given that this is a little bit different  
5 from coal because it is, as you say, a little bit more  
6 movable, my understanding is the industry has been doing  
7 more diligence in securing leases on adjacent properties  
8 where the horizontal border might be so that they  
9 lessen -- and give additional value to those so they'd  
10 lessen the question of whose guess is it anyway.

11 But the bottom line is, the fact that the tax,  
12 the assessment goes against the holder of the mineral value  
13 means, from a property tax perspective, it doesn't matter  
14 whose property it underlies. It's the entity that has the  
15 right to the extraction, so fugacious really has no meaning  
16 in this particular point. And then last, the depreciation  
17 tables do take into account the availability of resource.

18 So if the resource has been extracted, there is  
19 less value to that property and then, hence, the assessed  
20 value goes down. That can be affected by the market, and  
21 when that depreciation table is recalculated -- as I  
22 mentioned, they're recalculated every five to ten  
23 years -- that's very similar to what would happen in a  
24 commercial property. If you had a commercial property  
25 where you had all high-end stores and then we have a

1 economic bust and all those stores close, that property can  
2 apply for a reassessment and does because there is less  
3 value of the property because no income's being generated  
4 there.

5 MR. HERR: If I may, Representative Cox, to add  
6 kind of, what Doug's explaining to counties, it's great  
7 theoretically, and it took me a while to get my mind around  
8 the whole concept. And I tried to boil it down to more or  
9 less what we saw taking place was we're creating another  
10 parcel. Those leases basically are another parcel that's  
11 assessed, and it's treated similar to something like that.

12 So that's the way that, I guess, I helped  
13 understand that, okay, this is how you can tax something  
14 that's under the ground, something that's relatively  
15 stable. Also, the question out there about the fugacious  
16 nature, because that's the language that the Court kicked  
17 around in its decision in 2002, really when you look at the  
18 nature really though of the natural gas locked up in the  
19 shale, I would have to argue, is it truly fugacious?

20 I mean, because it is more or less stable, something  
21 similar to coal. Coal was always about being able to  
22 operate your coal, meaning being able to get to it to mine  
23 it and take advantage of it and use it as an energy source.  
24 Now, here we have the gas, which is actually locked up  
25 within the shale, and we notice we have to frac the shale

1 in order to get to that gas so then it can take on its  
2 fugacious nature. So it's kind of transitory like that.

3 So that kind of, like, is the way I try to piece  
4 this together in the early portions of my testimony, is  
5 that we're basically -- and I had to share this with my  
6 membership -- that we're creating another parcel that needs  
7 to be assessed for its value, and as Doug explained, that  
8 it's depreciated according to its depletion, what the  
9 reserves have the potential to yield and the very technical  
10 nature of it. So I don't know if that helps, but it helped  
11 me, I found out, throughout the process.

12 REPRESENTATIVE COX: Okay. Just one quick  
13 follow-up, if I may, Mr. Chairman.

14 You had said the reassessment, the request for  
15 reassessment, five to ten years is kind of the automatic  
16 thing, or if there's an economic downturn, some of these  
17 commercial properties seek reassessment when the stores  
18 leave or whatever the case may be?

19 MR. HERR: Yeah, any property that ceases  
20 value -- you add on to your house or your house burns down,  
21 your assessed value's going to change up or down.

22 REPRESENTATIVE COX: Under this scenario, would  
23 these property holders be able to do the same thing?  
24 They're not going to be treated any differently?

25 MR. HERR: That's correct because, as I said,

1 initially we do a depreciation table typically five years,  
2 sometimes ten. But if the market turns, then, yes, the  
3 same as any other property owner, they have rights of  
4 appeal under the law.

5 REPRESENTATIVE COX: Thank you.

6 Thank you, Mr. Chairman.

7 CHAIRMAN LEVDANSKY: Thank you.

8 Representative Seip?

9 REPRESENTATIVE SEIP: Thank you, Mr. Chairman.

10 Thank you all for your testimony today. Some of  
11 the remarks by Mr. Hill particularly captured my attention.  
12 We've had many prior discussions about the nuances  
13 associated with property tax assessments, and I guess we  
14 won't get into those today. But I'm always cognizant of  
15 the demands of human service delivery and the costs  
16 appreciated by the counties, and I certainly appreciate  
17 your comments because I hadn't thought about that.

18 There are more people, just a higher percentage  
19 of people seeking services from Children and Youth Services  
20 or drug and alcohol or some of those county human service  
21 systems that people typically don't consider. We're  
22 talking about drillers and businesses and business tax and  
23 those kinds of things, and we're really not always  
24 concentrating on those human service delivery costs. So I  
25 appreciate your comments, and I just wanted to highlight

1 that for the record so that that doesn't get lost.

2 And certainly the emergency management piece,  
3 those folks are very, very taxed. I certainly appreciate  
4 the work that they do. They have to try and address all  
5 different kinds of possible scenarios, and I'm sure there's  
6 a big cost in situations like this to them as well. So I  
7 just wanted to say I appreciate your comments on that, and  
8 thank goodness they didn't get lost in all the other  
9 important discussion that's going on.

10 MR. HILL: Thank you, and if I could expand on  
11 that just a little bit. I mentioned in my testimony that a  
12 transient population isn't any better or worse than our  
13 resident population. But one of the things that we find in  
14 human sources particularly, is for our resident population,  
15 at least they have family and other local supports, and the  
16 transient population often does not. And that actually  
17 increases the cost of service delivery for the same types  
18 of services. Thank you. I appreciate that.

19 REPRESENTATIVE SEIP: Excellent point. Thank  
20 you.

21 Thank you, Mr. Chairman.

22 CHAIRMAN LEVDANSKY: Thank you, Representative  
23 Seip.

24 Representative Kessler?

25 REPRESENTATIVE KESSLER: Thank you.

1           I just want to make sure I understand House Bill  
2 10. The township I live in, we have a quarry. And the  
3 trucks exit the quarry onto a township road, and it takes  
4 quite a beating. So we have to repair and pave that road a  
5 lot more often than a road that cars may be exiting onto  
6 from a development. The quarry is assessed based on  
7 commercial use and on a quarry, so it brings in ample  
8 enough money for us to be able to take care of that section  
9 of road.

10           Now, in this situation where you have a gas  
11 drill, you could have the same amount of trucks leaving  
12 that property, but that county, that local municipality is  
13 only collecting the assessed value on the person that owns  
14 the land, not based on its use. Is that --

15           MR. HILL: That's correct.

16           REPRESENTATIVE KESSLER: -- correct? So,  
17 therefore, you do need to bring in more revenues, just like  
18 with the quarry, as far as the wear and tear on the road in  
19 order to prepare that road for that type of traffic, where  
20 the money coming in on that land because it's leased  
21 doesn't come close to covering that.

22           MR. HILL: That's right.

23           REPRESENTATIVE KESSLER: Thank you.

24           MR. TROXELL: If I may add as well,  
25 Representative Kessler, is that the ironic part of this is

1 that the improved roads, because of the nature of the  
2 industry, traveling and drilling and once they're done,  
3 they don't need to move heavy equipment into that area, a  
4 lot of times, our communities have, now have these  
5 wonderful improved roads that they didn't necessarily need  
6 at that point. They may have been fine with a gravel road  
7 whose drainage was fine, whose technology deployed was able  
8 to take care of the water and the runoff and things like  
9 that.

10 Now all of a sudden, a community may find itself  
11 with a system of improved roads having to deal with the  
12 infrastructure that services those improved roads. So you  
13 may have to put curbing in; you're going to have to channel  
14 that water and its runoff, what type of streams it may  
15 impact, things like that. You know, you wouldn't think of  
16 these, but as you start to peel this onion, there are some  
17 issues.

18 REPRESENTATIVE KESSLER: Absolutely, because the  
19 comparison of what I used as far as the quarry and versus  
20 that, the moneys are not coming in and you have the same  
21 amount of truck traffic; you have the same problems. Thank  
22 you.

23 CHAIRMAN LEVDANSKY: Representative Mirabito?

24 REPRESENTATIVE MIRABITO: Thank you.

25 A couple questions, do you have any numbers of

1 the folks on probation?

2 MR. HILL: I don't have any, no.

3 REPRESENTATIVE MIRABITO: Are the counties  
4 collecting that information?

5 MR. HILL: I don't know if they are, but I could  
6 expect we could find out.

7 REPRESENTATIVE MIRABITO: I think that'd be  
8 helpful. The other thing is the hotel tax, the numbers of  
9 folks who are staying beyond the 30 days so that we're no  
10 longer collecting the hotel tax. Just by way of analogy,  
11 the folks who actually own the land, the farmer or the  
12 family that owns the land, they know they have gas under it  
13 and they don't do anything to develop it, they're not going  
14 to be subject to this, correct?

15 MR. HILL: That's correct.

16 REPRESENTATIVE MIRABITO: So it's really no  
17 different than if I own a piece of land and it's assessed  
18 low because it's vacant, but I decide to invest some money  
19 and put a million dollar building on it and now this  
20 million dollar building changes the assessment because I've  
21 changed the nature of the use of the land.

22 MR. HILL: That's correct.

23 REPRESENTATIVE MIRABITO: Here, instead of  
24 putting up a building, we're investing \$500 thousand in  
25 drilling equipment and we're changing it. So it's really,

1 in that sense, that's the equity that you're talking about?

2 MR. HILL: That's correct. Yes.

3 REPRESENTATIVE MIRABITO: Okay.

4 MR. HILL: Very well stated.

5 REPRESENTATIVE MIRABITO: I think that's all I  
6 have. Thanks.

7 MR. HERR: Thank you.

8 CHAIRMAN LEVDANSKY: Thank you, Representative.  
9 Representative Pallone?

10 REPRESENTATIVE PALLONE: Thank you,  
11 Mr. Chairman.

12 And I'm not exactly clear on what direction we  
13 were going, but I think -- I don't remember which one of  
14 you said it -- that the gas is fairly stable and not,  
15 whatever, fugacious. That's assuming that all the gas is  
16 Marcellus Shale. This House Bill 10 pertains to all gas,  
17 correct, not just Marcellus Shale? It includes coal  
18 methane and oil, which aren't stable. So I don't know if  
19 what you said is accurate. It isn't a stable mineral.

20 MR. HILL: It may be accurate for shale  
21 properties, but you're correct. This applies to any type  
22 of --

23 REPRESENTATIVE PALLONE: All four types of  
24 minerals.

25 MR. HILL: Right. But, again, returning to the

1 original point, the assessment is against the individual or  
2 the company that has the equitable interest, regardless of  
3 the property that it underlies. It's based on extraction,  
4 and so the bill goes to that individual, not to the -- it  
5 has no effect on the surface owners, so it doesn't matter  
6 what properties it underlies or the fact that it's movable.  
7 They have --

8 REPRESENTATIVE PALLONE: Well, I think  
9 Representative Kessler clarified it for me. This is a,  
10 kind of a value added kind of situation -- or  
11 Mirabito -- I'm sorry -- where you tax the real estate and  
12 then the improvement. This is considered another  
13 improvement on the property.

14 MR. HILL: That's correct.

15 REPRESENTATIVE PALLONE: The issue though -- and  
16 I got a couple of questions going down that road, but what  
17 we're talking about is gas, oil and coal methane which are  
18 being extracted by private companies. We also have at  
19 least two or more private water companies in Pennsylvania  
20 that are drilling water wells all over Pennsylvania to  
21 provide water utilities throughout the Commonwealth.

22 Many water plants are, or water systems are  
23 municipal authorities and owned by the community and  
24 whatever, but many are also private. Does House Bill 10  
25 pertain to the extraction of what I'm going to call very

1 generically the water mineral relative to private  
2 developers and private water companies, not just private  
3 gas, oil and coal methane extractors?

4 MR. HILL: Well, the House Bill 10, the only  
5 change in language relates to coal, oil -- I'm sorry -- to  
6 oil, gas and coal methane, and so there is no effect on  
7 water. Now, water to the extent it would be taxable, it  
8 would be taxable as it always has been. And for the  
9 purposes particularly as a public utility, that's not an  
10 issue.

11 I candidly don't know the answer if -- for  
12 example, in the eastern part of the state, we have a couple  
13 that make major extractions for the purpose of dye works or  
14 major extractions for the purpose of resale of the water,  
15 bottled water. And I'll be candid with you, I don't know  
16 how that applies, but I can find out for you.

17 REPRESENTATIVE PALLONE: And I wonder if we have  
18 maybe a constitutional issue, that we're treating one group  
19 of private companies that extract the mineral differently  
20 than a different group of companies that extract another  
21 type of a mineral, which is the H2O.

22 MR. HILL: Well, the H2O, I think, is a  
23 different matter because it's been treated as a utility.  
24 In this case, if you want to turn that constitutional  
25 argument a different way, we are now taxing coal and

1 limestone and others, and we're not taxing oil and gas.

2 REPRESENTATIVE PALLONE: I'm just curious as to  
3 the balance on that. That's all.

4 MR. HERR: Yeah. And if I could, I appreciate  
5 the remark about the smaller facilities. And that's  
6 something that I had in my written testimony, but didn't  
7 mention in the oral testimony. We do recognize, and  
8 particularly in the western part of the state, there are  
9 many of the older wells, you know, the smaller vertical  
10 wells and others that are commonly called stripper wells  
11 that really do operate on the margin.

12 And we understand that issue. Other states, I  
13 know Texas notably and I think some others, do provide some  
14 differentiation, if you will, between types of wells so  
15 that the ones that operate on a marginal basis aren't  
16 affected or aren't affected as greatly by the  
17 assessability.

18 REPRESENTATIVE PALLONE: And do you know whether  
19 or not this is going to cause, again, an additional  
20 mandated reaction by the county's assessment offices to go  
21 back out throughout the county and reassess a number of  
22 properties that have existing wells that already have been  
23 there for a decade or more and may be producing a little  
24 bit or a lot, but at least enough to provide that  
25 particular homeowner or small business with the allocated

1 CF's (ph) that they get because of their local lease or  
2 whatever?

3 Is that going to create another level or burden?  
4 Because it's easy to say, well, this is the new well.  
5 They're going to come in and -- but how about all these old  
6 ones? And I can tell you, my counties, Westmoreland and  
7 Armstrong, we got, not dozens, hundreds of them.

8 MR. HERR: I see. I know that.

9 REPRESENTATIVE PALLONE: And I'm looking at both  
10 of my counties that are financially strapped like  
11 everywhere else. Is that going to cause another problem  
12 for them to go out searching for these well heads?

13 MR. HERR: Well, again, as we say in the  
14 testimony, we concede that point for the industry on those  
15 older wells and those more marginal facilities. And we'd  
16 welcome the opportunity to find a way to minimize the  
17 impact on them. For any county that adds or adjusts the  
18 values for these properties on their assessment rolls,  
19 constitutionally, they will be obliged, if they look at  
20 one, they have to look at all before they can put it in  
21 place for any of them.

22 So if the county is satisfied with how all its  
23 wells are treated, then it doesn't have to do another  
24 thing, if they believe they're in comportment with the law.  
25 But if they decide we're going to have to go -- you know,

1 we have a lot of new wells that aren't assessed and we need  
2 to assess them, so we're going to have to look at the value  
3 of the older wells.

4 REPRESENTATIVE PALLONE: And lastly, I can see  
5 that there's a marginal value, if nothing else, because in  
6 the southern tier of Armstrong County that I represent,  
7 there were a number of surface gas wells drilled in the  
8 last four or five years. And those townships and boroughs  
9 really took a beating on the roads, and it cost them money  
10 that they didn't otherwise have.

11 But then when you start balancing that out, you  
12 know, I wonder if the owners of those properties would have  
13 been so appreciative if we ended up putting an additional  
14 assessment on their land because of the wells that they  
15 drilled. So we're going to have a serious balance there  
16 that we have to deal with.

17 The last issue or the last question I have is  
18 the test, if you will, or the taxing on the roads. What we  
19 did learn or what we do know is that beating of the road  
20 only occurs during that period of drilling, and then it  
21 doesn't happen anymore.

22 But yet, I don't see that as a limitation on the  
23 additional assessment to say, okay, we're going to assess  
24 you one way during the time you're abusing our roads, but  
25 then when you quit abusing our roads, we're still going to

1 assess you. So I think I have an issue with that as well.  
2 I don't know that that's equitable maybe to the company,  
3 although I'm sure the township or the borough or the city  
4 would enjoy that very well.

5 MR. HERR: And that's a fair point. And, again,  
6 returning to the testimony, a property tax is not a fee for  
7 service. We've raised these examples just to show that  
8 there are community impacts from any kind of, anyone who's  
9 a member of the community, but a property tax is based on  
10 value of property rather than services derived. And so,  
11 for example, Wal-Mart might move into a township, and  
12 they're added to the assessment roll.

13 And that's irrespective of whether Wal-Mart has  
14 required the two-lane road to become six lanes now or stay  
15 as it is or whether, whatever other impacts it might be.  
16 We value them and we're happy to have them as a part of the  
17 community, but they pay a fair share based on an assessed  
18 value of the real estate, not based on the specific  
19 services that they might derive from the community.

20 REPRESENTATIVE PALLONE: And I certainly  
21 understand that, and I appreciate that because I know that  
22 in my legislative district, a number of the communities  
23 have done analyses and came back and said that for every  
24 residential dollar that they collected cost them \$1.40; for  
25 every commercial property dollar that they collect only

1 cost them .60. They would naturally rather have a  
2 community full of commercial buildings than houses.

3 I guess we're getting to a point now where we'd  
4 rather have a community full of gas wells and oil wells and  
5 methane coal wells than businesses because that tax dollar  
6 might only cost them .20 because there's no people to  
7 protect; there's no streetlight needed; there's no fire  
8 hydrants; there's no water and sewer and all that that goes  
9 with it. So I understand that. And I fully appreciate it,  
10 and most communities will.

11 But I was just concerned though that when we're  
12 looking at it and we look at the infrastructure impact,  
13 while it's an improvement to the land arguably, it doesn't  
14 create a permanent tax on the services that the community  
15 generally provides as a commercial or a residential  
16 community would.

17 MR. TROXELL: That's why, I guess, as Elam  
18 shared earlier, why there needs to be some look at how we  
19 do posting and bonding currently because it's just not  
20 keeping up with the impacts that are taking place. And  
21 it's that temporary time when the exploration, when the  
22 wells are coming, heavy equipment is coming in. It's just  
23 that temporary time, and then after that, you know, we  
24 don't have the --

25 REPRESENTATIVE PALLONE: And then my last point,

1 and it doesn't require an answer. It's just a comment  
2 that, you know, I think it goes off what Representative  
3 Seip said with the inconsistency with property tax  
4 assessments throughout the Commonwealth.

5           When I look at my two counties that I represent,  
6 you know, one has a 1998 assessment value; the other has a  
7 1968 assessment value. I think that creates an issue that  
8 maybe exacerbates what we're trying to do or what you might  
9 be trying to accomplish with this. And I thank you for  
10 your testimony today.

11           Thank you, Mr. Chairman.

12           MR. HILL: We look forward to working with the  
13 Committee on the assessment issue in a separate context.  
14 Thank you.

15           CHAIRMAN LEVDANSKY: Chairman Rohrer?

16           REPRESENTATIVE ROHRER: Thank you, Chairman  
17 Levdansky.

18           I appreciate the testimony. I got just a couple  
19 of questions. I think a lot of these things have been  
20 covered quite well. I was thinking more along the lines of  
21 the public policy aspect, and I think Representative  
22 Pallone actually picked up on several things I'm thinking  
23 about here. One is this: The consistency of the  
24 application by bringing in the oil and gas to what is  
25 already existing under coal. Now, are they, in your minds,

1 the application here, the same? Is the assessment the  
2 same? Is the valuation the same? I mean, is all of that  
3 the same as you look at these two components in your mind?

4 MR. HERR: If House Bill 10 were law, yes.  
5 There's a value to the resource. There's a value upon  
6 extraction.

7 REPRESENTATIVE ROHRER: Both assessed the same  
8 way?

9 MR. HERR: And the methodology's comparable,  
10 yes.

11 REPRESENTATIVE ROHRER: Okay. All right. That  
12 would be 1. Number 2, in the testimony at the  
13 beginning -- well, I'll just follow up on that one other  
14 thing. If -- and I had thought about the water as an  
15 example. If something else were to be found -- for  
16 instance, a lease may be put in place for gas. Okay. And  
17 you may know that there's a value of a certain amount of  
18 gas in the ground.

19 A few years from now, they may find oil. Okay.  
20 What happens then? Is it automatically reassessed? Is it  
21 changed at that point, or how is that treated? Or suppose  
22 something else comes up down the road, could be like water  
23 or something new that it has not yet been discovered, and  
24 all of a sudden, it has value. What's the mechanism, and  
25 is this thing being done in such a way that everything

1 would be treated equally known or unknown, or are we  
2 talking about specifically treating things as we'd know it  
3 once something is determined to have value?

4 MR. HERR: The notion with mineral extraction is  
5 that there's an intent for that mineral to be extracted  
6 before it has a value. So most of you, given the state we  
7 live in, may probably have minerals under your property,  
8 but we're not going to assess you for that because you're  
9 not going to dig a big hole and pull it out.

10 And so to answer the specific notion, if you're  
11 going down for natural gas and you find liquid oil and  
12 that's not what you're there to extract unless you change  
13 your intent to extract that, which obviously means bringing  
14 in different kinds of equipment and whole different  
15 processes, then, no, that wouldn't immediately add to your  
16 assessed value. At the point at which you turn your  
17 operation toward extraction of the oil, then it would.

18 REPRESENTATIVE ROHRER: So it's a whole  
19 different set of permits?

20 MR. HERR: That's correct. It's a different set  
21 of permits.

22 REPRESENTATIVE ROHRER: So an action for  
23 allowing the recovery at that point would be a trigger at  
24 that point? All right. Another question if I could just  
25 follow up. In the testimony, a lot of what you talked

1 about was tied to local impact, correctional, whatever. So  
2 to some extent, the -- I mean, not that this becomes an  
3 impact fee, but in some respects, some of what was being  
4 discussed almost sounds a little bit like an impact fee  
5 type of a circumstance. Now, you mentioned that the  
6 industry has been working very, very well to make sure that  
7 impacts are, in fact, taken care of.

8 In your mind, is this -- are you really going  
9 after the inability to address impacts, and if the industry  
10 addresses the impacts, is the need therefore now met; or  
11 are we really, in truth, looking for more revenue because  
12 others, perhaps, have gone down or whatever?

13 And I think, to me, it's a little bit -- I'd  
14 just like to hear a further exploration of that because I  
15 think, you know, obviously everybody's becoming very  
16 creative on wanting to tap into what appears to be some  
17 potential new revenue.

18 And if everybody is successful in tapping into  
19 it, there won't be any revenue left. So within that  
20 balance of knowing impact and what's logical, what is the  
21 primary, what's the primary goal here in this, recovery of  
22 impacts and costs or a desire for some, the future revenue?

23 MR. HERR: Sure. The primary issue is equity  
24 and its equity of the property tax system. We believe we  
25 had that equity relative to these minerals prior to the

1 court decision. We believe we lost it with the court  
2 decision. To give you two points in support of that  
3 argument; first, we've been seeking this legislation since  
4 before widespread knowledge of the Marcellus play, and it  
5 was simply restore the law the way it had been and it would  
6 have effected primarily the existing wells and the ones  
7 that were being developed under the old regimen.

8 Second, we actually have included in the legislation  
9 an anti-windfall provision, so that if in the year a county  
10 implements the new assessed value system, a new system of  
11 assessing oil and gas wells, if the revenue increases and  
12 property tax revenue's projected to increase in the  
13 following year, then every taxing jurisdiction has to  
14 reduce its millage rate to what it was in the prior year  
15 and then treat any other millage increase as a separate  
16 vote. It's very much akin to what happens in the year  
17 following a full-scale reassessment. So, again, I think it  
18 addresses the issue of are we in this for revenue or not.

19 MR. HILL: Mr. Chairman, the way I kind of  
20 understood your question was, to me, is more or less this  
21 assessment language being put out there to deal with  
22 impacts. And I guess what I did in my mind is just return  
23 back to what exactly is an assessment. An assessment is  
24 when we place a valuation on a piece of property or a  
25 parcel because of what that property can deliver, what type

1 of impact that that piece, or parcel of property actually  
2 has on the economic nature of its community and other  
3 things like that. So when you can more or less say, yes,  
4 the assessment is to deal with the impact, but aren't all  
5 assessments dealing with impacts of some type?

6 MR. HERR: Another point to add in that respect  
7 is that while the companies by and large are very  
8 cooperative now, that's no guarantee for the future, number  
9 one; number two, I don't think any of us wants an ad hoc  
10 system of local taxation where we barter  
11 property-by-property-by-property-by-class of property for  
12 this is what your fair share should be; this is what your  
13 fair share should be.

14 And so valuing it using accepted market value  
15 approaches and adding it to the assessment roll and then  
16 the taxes apply blindly and uniformly on a millage basis  
17 against all of them, we think makes the most equitable  
18 sense. I think one other point to raise too is that we're  
19 also mindful of the future.

20 You know, it's one thing to fix the road right  
21 now because that's where the direct immediate impact has  
22 been, but even looking out in the longest term, we see  
23 historically, if you look at a picture of Warren County  
24 from around 1900, 1910, you see your denuded hillsides  
25 where we first came through and took all the hardwood and

1 then we put up all the oil wells and then that was gone and  
2 then saw a period of many decades of decline across the  
3 whole northern tier.

4 I think we also need to have some ability to  
5 generate revenue now to invest in our infrastructure, to  
6 invest in -- and not just our hardscape infrastructure, but  
7 also in community and economic development; so that once  
8 these industries face their inevitable decline, that we  
9 still have vibrant communities going forward.

10 REPRESENTATIVE ROHRER: All right. Thanks so  
11 much. I appreciate it.

12 CHAIRMAN LEVDANSKY: Thank you.

13 We've also been joined by Representative Dan  
14 Frankel from Allegheny County.

15 I just got a couple of quick questions -- I hope  
16 quick because I'd like to get back to the agenda. We're  
17 significantly behind schedule. Just for, I think for  
18 Mr. Hill, has any comprehensive assessment been done  
19 relative to -- you know, prior to 2002, obviously counties  
20 were legally entitled to include the value of oil and gas  
21 and coal bed methane in the assessed valuation.

22 Do you have any aggregate data or even  
23 county-by-county data as to what the total assessment of  
24 the mineral rights minus coal or prior to 2002 and any  
25 estimates on what it could be if House Bill 10 were law?

1           MR. HILL: We don't, no. And the reason for  
2 that is -- well, yes and no. We can do comparative data  
3 based on the wells that are in place in the period  
4 immediately prior to the decision --

5           CHAIRMAN LEVDANSKY: Prior to 2002?

6           MR. HILL: -- based on the changes in  
7 methodology. Going forward, we can't because you need a  
8 certain amount of statistical data on the leases and on the  
9 value of the lease and on the available mineral resource  
10 and so on to be able to do the calculations, and we don't  
11 have that. And absent the law, we have no means to get  
12 that data.

13          CHAIRMAN LEVDANSKY: Okay. So based on the  
14 income capitalization approach, you can put together, on a  
15 county-by-county basis, the assessed value prior to 2002?

16          MR. HILL: Right.

17          CHAIRMAN LEVDANSKY: And I'd appreciate it if  
18 you could provide me with that as a follow-up. Okay?  
19 Secondly, based on that evaluation then prior to 2002, if  
20 us could even indicate the amount of property tax revenue  
21 generated for both county, school district and  
22 municipalities based on that assessment prior to 2002.

23          MR. HILL: That latter point might be a little  
24 bit tougher because I have to go back and apply millage  
25 rates to every jurisdiction against those values, but we

1 can get you to an order -- it would still be valid to do a  
2 percentage comparison.

3 CHAIRMAN LEVDANSKY: Okay. Thank you. And one  
4 final thing, I think for either or both Elam and Ed. I'm  
5 going to deviate just a little bit from House Bill 10, I  
6 mean, because you mention in your testimony the whole thing  
7 about wage tax collection. You know, the increased  
8 drilling in Pennsylvania has resulted in a lot of new  
9 workers coming from out of state.

10 I mean, to be honest with you, these are  
11 very -- a lot of these positions are really technology  
12 specific skill to the drilling industry, and the people who  
13 have historically done that are from Texas, Oklahoma,  
14 Louisiana, Arkansas, places like that. Do you -- you  
15 pointed out the issue of collection of wage taxes.

16 Do we have to have reciprocal agreements in  
17 place between Pennsylvania and these other states in order  
18 for our municipalities to collect the wage tax, or can the  
19 local governments levy and collect the wage, local wage tax  
20 independent of anything else?

21 MR. HERR: I'll go first. I just actually  
22 looked this up yesterday due to some comments that were  
23 being made. Act 511 is fairly specific with in-state  
24 workers and out-of-state workers, and without the  
25 reciprocal agreement that would be up there, municipalities

1 would lose the ability to tax nonresident workers. If  
2 you're a resident worker, or resident of Pennsylvania and  
3 you go out of state and work, it's very specific about  
4 giving credit to that person.

5 If you're from out of state and come in without  
6 a reciprocal agreement, you may levy the tax, but the  
7 possibility and probability of getting that tax from them,  
8 you wouldn't receive because it will go back to their home  
9 state. And I had the citation. I forget what it is off  
10 the top of my head right now, but I can get that to you out  
11 of 511.

12 CHAIRMAN LEVDANSKY: Okay. Mr. Troxell?

13 MR. TROXELL: Yeah, I did see -- it's funny you  
14 brought that up because I did read yesterday over the  
15 wires -- it came from, like, the Observer Reporter, I  
16 think, that's out in Washington County, or out in western  
17 PA, and there was a tax collector there who was saying that  
18 you could collect a nonresident.

19 There's a few -- I mean, it was an editorial  
20 into the paper there speaking about the ability to levy  
21 that, levy a wage tax or an earned income tax because it  
22 all goes back to, you know, what we did a few months ago,  
23 weeks ago, years ago, but basically that you may be able to  
24 levy provided you had a nonresident.

25 So if there is some cloudy area there, we have

1 our staff looking actually at the language in 511 at this  
2 point to where, you know, a nonresident would stand in  
3 something like that. So that's something we need to get  
4 settled because, you know, we're very interested in that  
5 when it comes to basically, you know, those revenues that  
6 could be --

7 CHAIRMAN LEVDANSKY: Yeah, because in a lot of  
8 cases, I think, the workers that come from out of state are  
9 here for well over the majority portion of the days in a  
10 year, and chances are, I mean, I think this industry is  
11 going to continue to grow and boom in Pennsylvania. So I  
12 think we're going to have to take a look at that issue.

13 MR. TROXELL: And it also points to something  
14 that we're going to have to give to our folks in the tax  
15 collection committees. You know, we did Act 32 and the  
16 earned income tax collection like that. That's something  
17 that we're going to be talking to our municipalities when  
18 we're putting these RFPs together for those collectors; you  
19 better look into that aspect of 511 to see whether they can  
20 collect that.

21 CHAIRMAN LEVDANSKY: But the problem there is  
22 the residents could be a lot of motels and hotels.

23 MR. HERR: Yeah, because they're still listed as  
24 living in Texas, so they're not full-time residents in  
25 Pennsylvania.

1           MR. HILL: Right. The real answer would be to  
2 reinvest in our workforce development programs so that we  
3 bring the jobs here too.

4           CHAIRMAN LEVDANSKY: Yeah, long term, that's  
5 obviously -- okay. Gentlemen, thank you very much for your  
6 testimony and for your tolerance in answering a lot of  
7 questions.

8           MR. HILL: Our pleasure. Thank you.

9           CHAIRMAN LEVDANSKY: Next, I'd like to call  
10 Mr. Lou D'Amico. Mr. D'Amico is the Executive Director of  
11 the Independent Oil and Gas Association of Pennsylvania,  
12 otherwise known as IOGA. Also, before Mr. D'Amico gets  
13 started, we've been joined by Representative Dave Reed from  
14 Indiana and Armstrong Counties.

15           Mr. D'Amico?

16           MR. D'AMICO: Good afternoon, Chairman  
17 Levdansky, Chairman Rohrer, committee members, and  
18 Representative DeWeese -- I don't know if he's still here  
19 or not -- also to you. Rather than go through the  
20 testimony and read it verbatim since we've already been  
21 here for quite some time, I'm going to kind of summarize as  
22 I go through with some of these things and give you an  
23 opportunity to question some of the things that we've heard  
24 already, and I'd be more than happy to deal with those.

25           First of all, let me tell you, I hate to take

1 blame for anything, but I guess I individually am the  
2 reason why we're today. I was the one who encouraged our  
3 organization to file the suit back, I guess it was 1998  
4 when we started the process that led to the Supreme Court  
5 decision in 2002. Obviously, you know, both IOGA and the  
6 Pennsylvania Oil and Gas Association, who I'm also  
7 representing here today, are opposed to House Bill 10.

8           And we went through great effort to have this  
9 overturned, and the primary reason for it was the very  
10 methodology that was discussed and how we approach  
11 assessment of oil and gas properties. When the Supreme  
12 Court ruled the overwhelming majority -- you know, it was a  
13 unanimous decision, and they all concurred that the  
14 language in the tax authorization did not include natural  
15 gas and oil.

16           Two of the justices, Justice Saylor and Justice  
17 Nigro, actually went a step further and said that, indeed,  
18 the very nature of natural gas makes it inappropriate to  
19 tax as real estate because it doesn't have the same  
20 qualities as real estate, and what he's referring to is the  
21 fugacious nature -- I almost hate that word, but the  
22 ability of it to flow across boundaries.

23           The problem with fugacious nature is not only in  
24 where the gas is actually coming out of. From an  
25 assessment status, that makes no difference. It's actually

1 assessed at the well which it would come out. But where it  
2 makes a difference is as additional oils are drilled, we  
3 have a dramatic change, a potential for dramatic change in  
4 the flow rates within a reservoir. I'm not a tax expert.  
5 I can't sit here and tell you the ins and outs of how a  
6 severance tax might work, how a wage tax might work or some  
7 of these other things.

8 I am a petroleum engineer, and I do know how  
9 natural gas flows and the problems with assessing values to  
10 natural gas. That was the key issue here, that as we  
11 change -- and the industry has changed so much. We've gone  
12 from an era where natural gas prices were extremely stable  
13 in the early part of my career, to a time now where from  
14 day to day, we're not sure where natural gas prices are  
15 going to be headed.

16 In the early days of the development of this  
17 Marcellus play when it first started drilling wells, we  
18 started doing some county outreaches to explain to people  
19 what this all meant. And I was very excited to tell them,  
20 you know, we're getting \$13.70 in mcf of gas, and even I  
21 fell for the dream that this was going to be the do-all and  
22 save-all for Pennsylvania with huge numbers because people  
23 were just going to be dying to get that kind of revenue  
24 back.

25 Well, today, I haven't seen this morning's

1 numbers, but our numbers are down about \$5.40 and falling  
2 here in the middle of winter. I think we're going to see,  
3 as the year progresses, the prices are going to continue  
4 downward, not upward. And this is happening on a  
5 year-to-year basis. The idea that you're going to be able  
6 to set a schedule that's going to last five or ten years  
7 what the property value's going to be is, for this industry  
8 is ludicrous.

9           It's not like a house where, you know, the house  
10 is either doing one or two things; it's going to stay the  
11 same, or it's, in most cases, going to appreciate. Our  
12 value's going to be all over the place, and we're going to  
13 have to come back every year to seek modifications of the  
14 assessment on this value. This is not a cheap process.

15           What led us in the case of Fayette County  
16 originally was that the cost to assess the properties in  
17 Fayette County was actually going to exceed the amount of  
18 money that Fayette County was going to get back from our  
19 gas prices at that time, and it did just not make economic  
20 sense for the county. It did not make economic sense for  
21 us to go through all these consistently bringing more and  
22 more information to fight every year over what this  
23 assessment might be.

24           You know, I think that these are key issues. I  
25 think if we go back to the Supreme Court -- if House Bill

1 10 passed tomorrow, was concurred in the Senate and we  
2 would go back to the Supreme Court again on the same issue,  
3 I think we would win the case because I think the  
4 difference, the flow of natural gas and the fact that it  
5 will change the value so much, I think we would win.

6           The roads issue is certainly where we're going  
7 to have the greatest impact. It's already where we're  
8 having the greatest impact. We are stepping to the plate  
9 as an industry and repairing those roads. Not only are we  
10 repairing those roads, in most cases, we're actually  
11 approving the standards of the roads because, for our own  
12 purposes, we cannot go back to a two-lane goat path, which  
13 is some of the areas we're operating in is basically what  
14 we have. These roads were designed to no more than handle  
15 a school bus once a day during the school year and an  
16 occasional milk truck.

17           They were not meant to handle the kind of truck  
18 traffic we bring out to it. So it's like -- it's the  
19 pottery barn rule for us; we break it, we fix it, and it's  
20 as simple as that. Are there cases out there where  
21 somebody has not in the past done that? I'm sure there  
22 are. And there are legal abilities for the townships or  
23 counties to address that and get their funding back.

24           I think on some of the other issues that were  
25 raised, I kind of scratched my head. I think one of the

1 points were made about Child and Youth Services and the  
2 impact all these transient workers were bringing in. I  
3 guess I'd have to actually see some numbers to get that  
4 because most of the people I see coming in on a drilling  
5 rig aren't bringing their wives, families and girlfriends  
6 with them. They're bringing their pick-up truck and a  
7 suitcase and living out of the motel.

8 Up until today, I was kind of shocked. I didn't  
9 realize that there was a law that said that if you were in  
10 a hotel room for more than 30 days, you were no longer  
11 subject to that tax. That's certainly not our fault, and I  
12 would actually encourage the General Assembly to fix that  
13 in the case because I think that is going to be an issue.

14 I do take some exception, Representative  
15 Levdansky, about all these guys who are coming in from the  
16 southwest because as a native here, I've worked all my  
17 career in Pennsylvania. We have the third most active  
18 drilling state in the country for about the last seven or  
19 eight years. We have a lot of people already employed in  
20 this industry who didn't come from Texas and Oklahoma, and  
21 we're very proud of that.

22 And we are also very eager to see the percentage  
23 increased dramatically. Many of the companies that are  
24 coming in have actually built into their contracts that any  
25 contractor that they bring in from out of the state is

1 required, after a period of six to nine months, to have a  
2 significant presence of Pennsylvania employees on their  
3 staff, which I certainly strongly encourage. Again, as a  
4 native, I'm not interested in creating jobs for Texans.  
5 I'm interested in creating jobs here.

6           Some of the other costs -- excuse me. I was  
7 kind of shocked to hear Mr. Troxell's comment about  
8 improving the roads, that that was a problem. I actually  
9 thought we were supplying a benefit by improving, and I  
10 think that is the case in most cases. And I think the  
11 damages that are done for the most part will be those  
12 damages that will be done on township roads.

13           There will be some traffic in boroughs and  
14 cities, and that will have to be recognized and dealt with  
15 and repaired. As far as whether we can expect the same  
16 kind of people to be operating in this industry in the  
17 future, I think it's very clear that that is the case. I'm  
18 not concerned about seeing a fly-by-night outfit coming in  
19 here to try to operate at the cost of drilling the  
20 horizontal Marcellus Shale well.

21           This is not for the weak-hearted or  
22 faint-hearted. These are folks that have serious  
23 investment and serious taste for risk to undertake these  
24 efforts. You know, I think even some of the people who I  
25 have traditionally represented in our industry are not

1 going to be able to pursue Marcellus Shale for that very  
2 reason, so I think the funding issue where these things are  
3 is not necessarily a legitimate issue. You know, again --  
4 and I think it was Representative Pallone raised the issue  
5 about the timing of how long this activity is going to be.

6           During the drilling phase is when all the truck  
7 traffic's going to be. It's going to be when all the  
8 personnel are going to be swarming into an area, and that  
9 is a short-term issue. After that point, then the people  
10 who are left are going to be the people who are actually  
11 doing the production, who are involved as welltenders and  
12 are permanent employees of that area.

13           Representative Reed has already left, but  
14 Representative Pallone, if you have Armstrong and  
15 Westmoreland, you're familiar with that right now. You  
16 have those people in your counties, as Representative Reed  
17 does, and there are some in Representative Ellis's district  
18 also.

19           So I think the long run, the impact on the state  
20 is going to be minimal for what we are not paying for flat  
21 out. And I guess at this point, probably rather than  
22 sitting here and talking any longer, it would behoove me to  
23 turn it over to you all and let you ask the questions and  
24 let me address them as best I can.

25           CHAIRMAN LEVDANSKY: Thank you, Mr. D'Amico.

1 Any questions from members?

2 Representative Mirabito?

3 REPRESENTATIVE MIRABITO: Thank you.

4 You made the statement that real estate will  
5 stay the same or appreciate as an example of the difficulty  
6 of trying to reassess, but if we've learned anything in  
7 this recession, real estate has crashed; commercial real  
8 estate, rental real estate. You know, values for rents  
9 have gone down and a question of whether landlords go back  
10 and get reassessments, so I kind of think that that's not a  
11 fair argument for saying that it's difficult.

12 MR. D'AMICO: Well, let me address that if I  
13 can. I think that you're absolutely right. I mean,  
14 particularly, not necessarily in Pennsylvania because I  
15 think fortunately, we have not been hammered quite as bad  
16 in the real estate market as some of the other areas of the  
17 country; but the reality is, those are unusual events and  
18 unusual occurrences compared to virtually monthly changes  
19 and weekly changes and daily changes in price and value of  
20 natural gas and oil.

21 We're affected by so many things beyond our  
22 control. We're affected by industrial demand. In the  
23 midst of a recession, you know, obviously there's not as  
24 much industrial demand, which is a big part of what makes  
25 the natural gas industry work. We're also affected as oil

1 prices rise and fall because natural gas is, in many cases,  
2 used as a replacement for fuel oil. Political instability  
3 in other parts of the world has affected us because of the  
4 oil prices.

5 Every time that Accuweather says there might be  
6 a hurricane blowing into the Gulf of Mexico, our pricing  
7 goes crazy here in Pennsylvania because of the off-shore  
8 platforms and all the productions within 20, 30 miles of  
9 the Gulf in the southwest. So these things happen to us on  
10 almost a daily basis. It's not something that's really an  
11 ongoing everyday event for other real estate.

12 REPRESENTATIVE MIRABITO: You know, one of the  
13 issues that resonates with me is the question of equity,  
14 and you mentioned that in the most active drilling  
15 phase -- I'm sorry -- in the drilling phase is when you  
16 have the trucks and so forth, and then after that, you said  
17 you'll have people involved in production.

18 And I guess the question I would ask is part  
19 of -- or the sole purpose of this is what the gentleman  
20 before you testified about was the concept of community,  
21 that taxes support communities. So whether you work in the  
22 production phase or you work in the drilling phase, you're  
23 a member of a community. And I guess I just don't know how  
24 to explain to the mom and pop person who has a barber shop  
25 who's paying an assessed value on their barber shop that's

1 higher than their neighbor's building because they generate  
2 income that they're subject to this assessment, but a very  
3 large entity that drills gas or oil is not. And I guess  
4 I'd like you to try to, if you could, just address the idea  
5 of community.

6 MR. D'AMICO: Well, I think the idea of  
7 community is certainly -- again, as I indicated earlier,  
8 I'm a native here and certainly feel the impacts of that.  
9 I also live in a natural gas producing area. I live in  
10 Crawford County surrounded by gas wells, which is how I got  
11 there in the first place. As far as what the support of  
12 community is, every nickel that we are spending in those  
13 communities actually goes back to that barber shop or the  
14 restaurant or the bar or the grocery store or the local  
15 Ford dealer who we're buying trucks of off.

16 So, you know, there is a large financial  
17 investment going into that community that there is benefit  
18 to. In the long run as the producing phase of these wells  
19 go in, then those are actually the people who are living  
20 members of that community. They actually live there; they  
21 own property there; their children go to school there.  
22 That's the only difference of what I'm referring to.

23 REPRESENTATIVE MIRABITO: I mean, for example, I  
24 have a business, right? I collect rents; I reinvest money  
25 in the community. I hire people to put a roof on; I hire

1 people to put a boiler in, but I'm still subject, my real  
2 estate is still subject to the tax. And I guess what I  
3 just don't understand of how to explain to people is you  
4 take a group of people and make them subject to it, but  
5 then you carve out one group. And I understand the  
6 argument you made in the beginning about the fugacious  
7 nature of it, and I think that that's something to be  
8 looked at.

9 MR. D'AMICO: And that's really the key issue to  
10 me that I raised with the Supreme Court originally, is that  
11 by the very nature of natural gas, it's not real estate;  
12 whereas, coal has a discreet property on a farm or a parcel  
13 of land that is x-feet thick, so many acre foot, so many  
14 tons return from that. You can get a pretty accurate  
15 estimate, not only to how much is there, but where it's  
16 actually coming from.

17 It's not going to decline. That coal's not  
18 going to move over to the next property and be extracted  
19 there. It's actually going to come from that property.  
20 And that is the difference with the natural gas. The other  
21 issue too is, I think part of the temptation, I would  
22 say -- and I think somebody mentioned it earlier, the  
23 temptation from everybody to want a piece of the action  
24 with this Marcellus Shale that's being developed is we're  
25 not the only ones who are impacted on this, the industry.

1           When there is a severance, we're getting, at  
2 most, seven-eighths of that gas. One-eighth still remains  
3 with the mineral owner who, in most cases, is also the  
4 surface owner. So you're also impacting that individual  
5 over and above what they're already paying in their real  
6 estate taxes.

7           In the case of the Marcellus Shale where these  
8 royalties are considerably higher than the normal  
9 one-eighth that you find in the shallow zones, that impact  
10 is going to be pretty hefty on these folks, and it's going  
11 to be something that's going to be broad based across the  
12 state.

13           We're not talking about one small discreet area  
14 where there's coal. The natural gas with the Marcellus  
15 Shale, we're looking at something that's going to be from  
16 Greene County all the way to Wayne County, and those  
17 property owners are going to be impacted by that.

18           REPRESENTATIVE MIRABITO: Last question for you,  
19 on your tax returns at the federal level, are you able to  
20 depreciate the value of the natural gas against the income  
21 earned?

22           MR. D'AMICO: I'm going to have to tell you, as  
23 they said earlier, I'm not sure what tax advantages there  
24 are. I do know there are deductions for depreciation and  
25 depletion for corporations here in Pennsylvania on

1 Pennsylvania taxes. I do know that partnerships do not  
2 have those benefits. The partnerships do not get any  
3 deduction on that in Pennsylvania.

4 REPRESENTATIVE MIRABITO: I guess what I'm  
5 suggesting is the fact that these things are subject to  
6 federal depreciation on the federal level suggests that  
7 there isn't a way to assess the value to them and that it  
8 makes it legitimate for assessing the value in HB 10.

9 MR. D'AMICO: Well, I would also say that,  
10 again, we as an industry, for our own purposes, are  
11 required to -- for public companies, we're doing this every  
12 year. We're re-evaluating the reserves, and sometimes that  
13 stings pretty heavy for companies when they find that their  
14 stock prices are declining dramatically because they've  
15 taken a write-down in their reserves.

16 CHAIRMAN LEVDANSKY: Thank you, Representative  
17 Mirabito.

18 Chairman Rohrer?

19 REPRESENTATIVE ROHRER: I got a question here  
20 just following up on this. The question that was asked  
21 there ties into it. In trying to determine value, we  
22 do -- it seems that it flips really close to income or  
23 value of that kind of a thing as measured, and even federal  
24 deduction would be tied into it and income, where you're  
25 tieing it to the value that's coming out of the ground at

1 the point that it is rather than an assessed type of a  
2 value.

3 But that being said, is there -- I mean, you can  
4 see what the testimony was and what the desire here on the  
5 parts of those who've testified. Is there a model that  
6 exists somewhere else in the country, or is there anything  
7 that the industry would say is better than a consideration  
8 of this as real estate that is a better way to go, or is  
9 there really no real way to go?

10 MR. D'AMICO: I'm going to struggle a little bit  
11 with that, but let me think about that for a second. I  
12 think, first of all, every state in the union that has oil  
13 and gas reserves do something different. Some have no  
14 corporate tax; some have severance taxes; some have real  
15 estate, some don't. It's all over the place. And one of  
16 the toughest things that we've tried to do is, over the  
17 years, compare the various states and what the level of tax  
18 burden is.

19 A model, from my standpoint, the model that  
20 needs to be taken in any case of assessing is some sort of  
21 a profit or income tax type structure. I think one of the  
22 fallacies of this approach is you have the difficulty in  
23 doing assessed value, but we know how much comes out of the  
24 property in any given year.

25 The difference between that and a severance tax,

1 which is also, you know, one of the things we're hearing  
2 proposed all over the state, is a severance tax. The money  
3 is not income based. The state takes its chunk before  
4 there's any profit to be made. You know, and I know that's  
5 not the direction we want to be talking about today, but  
6 for a quick example, at \$7.50 -- I ran some numbers here a  
7 year ago when those prices were common -- that last year's  
8 proposal of a severance tax amounted to a 33 percent net  
9 income tax over and above what shallow producers were  
10 already paying.

11 I've never done that calculation for the  
12 Marcellus, but I think an income approach is probably a  
13 fairer approach rather than doing that. But I think the  
14 question in my mind that needs to be addressed is what  
15 money is needed where and how it gets there and in addition  
16 to how it's calculated and the need and the impact it's  
17 going to have on the industry.

18 One of the things we're hoping is to attract the  
19 jobs that I've talked about earlier, and to do that, we  
20 have to have a viable industry here in Pennsylvania. The  
21 Marcellus Shale has a huge promise we think, but the  
22 reality is we have very few wells on production. There's  
23 some question about what their decline rates are going to  
24 be.

25 A lot of people made huge investments in leases,

1 in drilling. There are folks out there every day making  
2 huge investments in pipeline infrastructure. At one point  
3 is this industry actually going to make a profit? I have  
4 my questions on that. I have predicted it's going to be  
5 three to five years before Marcellus producers actually  
6 turn a real profit in Pennsylvania. That's a roundabout --  
7 I'm not sure if I answered your question.

8 REPRESENTATIVE ROHRER: No, that answered my  
9 question quite well, and I think the point that you're  
10 saying is that something that's tied to value as determined  
11 at the point it's taken out of the ground is more realistic  
12 than a value that's assessed at any one point in time,  
13 particularly with all the viability that's there. That's  
14 basically what you're saying?

15 MR. D'AMICO: Yes.

16 REPRESENTATIVE ROHRER: All right. Thanks very  
17 much.

18 CHAIRMAN LEVDANSKY: Representative DeWeese has  
19 a question he'd like to ask.

20 Bill?

21 REPRESENTATIVE DEWEESE: Not a question, I just  
22 want the record to show that Lou and the people he  
23 represents have been excellent neighbors to those of us in  
24 the 50th District, and my motivation for introducing the  
25 bill has nothing to do with the warm feelings that he's

1 generated among the townships, the boroughs, the school  
2 districts and the county governments back home.

3 And I just wanted to the record to show that  
4 because this is not antagonistic. This is just a way when  
5 our revenue yields are so questionable and so paltry, this  
6 was something I thought to revivify what we had in 2001 and  
7 2000 and 1999 backward. But, again, Lou and his friends in  
8 the industry in Greene County in the 50th District have  
9 been wonderful neighbors. Thank you.

10 CHAIRMAN LEVDANSKY: Okay. Thank you.

11 Mr. D'Amico, I have a few questions. Relative  
12 to the court decision, it seems as though the central issue  
13 is the fugaciousness or lack thereof of particular  
14 minerals, and correct me if I'm wrong.

15 So the decision is that because oil and gas are,  
16 by their very nature, fugacious materials and difficult  
17 then to say how much there is under a particular tract or  
18 parcel of property, that it should be exempt as compared  
19 to -- you know, it should be exempt from property taxation  
20 or included in the assessed value as compared to, say, for  
21 example, coal or limestone, which are deposits that clearly  
22 don't move?

23 MR. D'AMICO: Right.

24 CHAIRMAN LEVDANSKY: It just seems to me  
25 that -- I don't know -- there are minerals, and determining

1 whether or not they're fugacious or not, to determine  
2 whether or not they're taxed or not just would seem to  
3 place some inequity on those individuals and businesses  
4 that own minerals that aren't fugacious. Could you see  
5 where there'd be, like, an inherent in equity in that?

6 MR. D'AMICO: Again, it's whether it's a mineral  
7 or some other item, whether -- and I'm trying to think how  
8 to best describe this. The issue is whether or not the, by  
9 its nature, natural gas sits on a property and is  
10 appropriate as real estate. That's the question that two  
11 justices agreed with us outright that that was not the  
12 case. The other ones did not address the issue.

13 CHAIRMAN LEVDANSKY: Okay. The amount of  
14 drilling that has gone on in the state, say, for the last  
15 ten years, exclusive of about the last two years when  
16 there's been tremendous interest because of Marcellus,  
17 what's been going on? In terms of the drilling, has it  
18 been stable? Has it been getting less prior to Marcellus  
19 when the permits really started ticking up about two years  
20 ago?

21 MR. D'AMICO: Yeah. Natural gases prices had  
22 started to head up where they reached that \$13.70. Yes,  
23 the activity level across the country had increased, and  
24 Pennsylvania was a beneficiary in that. One of the -- the  
25 big difference between drilling in Pennsylvania versus

1 drilling in most of these other states is the productivity  
2 of the wells. Even though we were the third most active  
3 drilling state in the country, we were a distant 15th in  
4 production. Our wells for the most part prior to Marcellus  
5 were shallow marginal wells with very low productivity. We  
6 made money by keeping our cost at an absolute minimum, and  
7 as prices rose and fell, our activity levels rose and fell.

8 CHAIRMAN LEVDANSKY: So it's the price that  
9 affects a business's decision to whether or not we're going  
10 to drill or not. It's the price of the product that is the  
11 predominant factor.

12 MR. D'AMICO: It's the overall economic  
13 decision. If you come into Pennsylvania and drill a  
14 shallow well with virtually a 99 percent success ratio, the  
15 risk is a little bit lower; and if the gas price covers  
16 your cost, then we'll attract drilling.

17 CHAIRMAN LEVDANSKY: Okay. So prior to 2002,  
18 oil and gas were subject to property taxation, and then  
19 after 2002, it wasn't. Did we see a growth in drilling or  
20 a drilling boom created because we no longer taxed it?

21 MR. D'AMICO: No. We saw a drilling boom  
22 because overall cost versus price, the price had gotten to  
23 the point where it made a lot of sense to drill in  
24 Pennsylvania. I have never, we have never as an industry  
25 claimed that the real estate tax was going to drive people

1 completely out of the state or any such claim as that.  
2 Does it have an overall impact on our cost structure and  
3 how much money we can attract to drill wells? Of course it  
4 does, but we've never made the claim that we're going to  
5 leave the state because we have a real estate tax.

6 CHAIRMAN LEVDANSKY: Okay. So if House Bill 10  
7 were to become law, that would likely have a negligible  
8 impact on whether or not, you know, on the amount of  
9 drilling that's going on in the state especially compared  
10 to the price volatility of gas?

11 MR. D'AMICO: Again, it depends largely on our  
12 total cost versus price. It's an example of the cost of  
13 operating in Pennsylvania versus drilling -- let's talk  
14 about the Marcellus for a minute. It's more expensive to  
15 drill a Marcellus well in Pennsylvania than it is to drill  
16 a similar well of Barnett Shale in Texas, regulatorywise,  
17 drainwise, highwaywise.

18 So the total cost will be considered. If our  
19 reserves are bigger in the Marcellus than the Barnett, yet  
20 the Barnett is considerably cheaper to operate, a company  
21 says, we'll put our money into the Barnett Shale rather  
22 than here. They might put it in the Haynesville Shale in  
23 Fayetteville. Somebody mentioned early, and I don't recall  
24 which speaker, talked about the gas is always going to be  
25 here, so there will be development.

1           Although that is the case -- it's not like we're  
2 going to move a plant. But the reality is, if I, as an  
3 operator, have the option of going into the Haynesville  
4 shale and my overall economics is better in that area in  
5 northern Louisiana than it is to go into Bradford County,  
6 Pennsylvania, I'll be in Louisiana.

7           CHAIRMAN LEVDANSKY: So it's really the spread  
8 between the cost of operation and the price you could  
9 charge, the market price versus the cost of operation.  
10 That differential is what really affects the investment  
11 decision making?

12           MR. D'AMICO: That's correct. It's overall  
13 cost.

14           CHAIRMAN LEVDANSKY: Okay. And correct me if  
15 I'm wrong. Vis-a-vis the Barnett and the other gas shale  
16 formations down in the south central part of the state, one  
17 thing, one advantage we do have isn't just the fact that we  
18 have the supply, but the market is right here as well,  
19 isn't it? I mean, isn't about 40 to 45 percent of the cost  
20 of gas tied up in transportation? And that being so, I'm  
21 just going to --

22           MR. D'AMICO: That's not entirely correct. A  
23 good portion of that is transportation, but it's the local  
24 distribution company level. Whether we're drilling it in  
25 Pennsylvania or I'm drilling it and bringing it up from

1 Texas, it's going to have the same impact. We're seeing,  
2 we've seen over the last two decades a dramatic decrease in  
3 the price impact of the transportation rate, the long  
4 lines, the interstate lines coming up from Texas. We got  
5 another line that just came in from the Rocky Mountains,  
6 the Rocky Mountain Express, which is dramatically impacting  
7 our prices here because there's additional supply coming in  
8 from the Rocky Mountains that didn't exist before here.

9 CHAIRMAN LEVDANSKY: Right. Well, but, I mean,  
10 the fact is they've got to build those pipelines; they've  
11 got to build the compressor stations. They've got to  
12 maintain them. They've got to pump that gas pretty far  
13 away to get to the northeast corridor, vis-a-vis  
14 Pennsylvania, we'll be able to pump it a couple hundred  
15 miles compared to 12 hundred.

16 MR. D'AMICO: And that's, in the long run, we're  
17 hoping that is a significant benefit. It's going to be  
18 something we're looking for in the future. Right now,  
19 there's not that much of a difference.

20 CHAIRMAN LEVDANSKY: Okay. One other quick  
21 question, from your perspective in the industry and as an  
22 engineer, a natural gas well that produces, say, 60  
23 thousand mcf's a day; pretty big well, average?

24 MR. D'AMICO: For Pennsylvania, no, that  
25 actually is a pretty good well. For the rest of the

1 country, that's a pretty bad well. I think the numbers  
2 that the IRS uses for a stripper well, which is a marginal  
3 benefit well, is 90 mcf a day. And by the 90 mcf-a-day  
4 ruling, probably 97 to 99 percent of the wells in  
5 Pennsylvania are marginal wells.

6 CHAIRMAN LEVDANSKY: And just for information,  
7 House Bill 1489, the other bill that is not the subject of  
8 this committee hearing, it exempts every, it exempts  
9 stripper wells that produce 60 thousand mcf per day. You  
10 know, I presume you're aware of that.

11 You know, you pointed out before that a  
12 severance tax would impact the industry, but the reality is  
13 that it would exempt that portion of the industry that has  
14 historic stripper wells producing, you know, less than 60  
15 thousand mcf a day.

16 MR. D'AMICO: Yeah. Again, I guess, like you  
17 said earlier, I would comment more on the severance tax  
18 when you have more hearings on that.

19 CHAIRMAN LEVDANSKY: Yeah. I'd like to get to  
20 that. Trust me. And now just a point I want to make, and  
21 you can react to it or not, just pointing out that it's  
22 really about the price of gas that really affects the  
23 decision to invest in drilling or not. Range resources, we  
24 have a citation on this. It basically said that they could  
25 make money at \$2.50 an mcf, so whenever the prices hit rock

1 bottom in Pennsylvania in the latter part of last year, at  
2 \$2.50, they were still able to make a profit.

3 I'm not saying a lot, but they did say that. So  
4 any time -- so when you see price go significantly higher  
5 than \$2.50, I think it attests to the fact that their cost  
6 structure is such that if you could make money at 2.50, it  
7 would seem to me that you could not only make money at  
8 prices higher than that, but you could probably well afford  
9 to make money and pay a severance tax at the same time when  
10 prices are higher than that.

11 And just one final thing, and, again, you can  
12 react to all this if you want to or not. I hear a lot  
13 about all the taxes that the gas industry and drillers  
14 already pay. Just let me point out a couple of things.  
15 Wage taxes, wage taxes may or may not be paid by the  
16 employees. You know, we heard the difficulty in collecting  
17 those, but, again, those are wage taxes paid by employees,  
18 not by the corporation.

19 Property taxes, you know, thanks to the court  
20 decision now, the oil and gas industry doesn't pay property  
21 taxes. You don't pay a severance tax unlike every other,  
22 nearly every other state that produces gas with the  
23 exception of one or two. And you have the, in terms of the  
24 sales tax, you have the manufacturer's exemption, so a lot  
25 of the materials that you use in your drilling processes

1 are exempt from the state sales tax.

2 And on top of this, two-thirds of the wells  
3 drilled last year in Pennsylvania were by companies who had  
4 LLCs, who had subsidiaries that were LLC, and thus, they  
5 were subject to the personal income tax and not the  
6 corporate net income tax. One could make the argument, I  
7 think pretty strongly, that the industry isn't paying their  
8 fair share of taxes vis-a-vis other businesses in the state  
9 and individuals for that matter.

10 So if at the end of the day -- I'll end with a  
11 question, and you can react if you want to or not. If at  
12 the end of the day your choice is a property tax or a gas  
13 severance -- I know it's cod liver oil -- which is your  
14 choice?

15 MR. D'AMICO: Neither. No, I think that a  
16 question that Representative Rohrer asked earlier is  
17 how -- you know, I think the best process is some sort of  
18 an income-type tax or revenue-based tax that is not off the  
19 top for anybody who makes a profit or not something that  
20 requires some great calculation to figure out.

21 CHAIRMAN LEVDANSKY: Like a gross receipts tax  
22 like Ohio has?

23 MR. D'AMICO: I'm not familiar with Ohio.

24 CHAIRMAN LEVDANSKY: Okay.

25 MR. D'AMICO: Again, I'm an engineer. I'm not

1 an accountant, so I don't have a clue to how -- you're  
2 asking an engineer to come up with a solution that good  
3 accounting tax people haven't figured out in years.

4 CHAIRMAN LEVDANSKY: Well, listen, I appreciate  
5 your testimony and your frank honest answers to our  
6 questions even though they're a little pointed from time to  
7 time, but there is one final question by Representative  
8 Kessler.

9 REPRESENTATIVE KESSLER: With horizontal  
10 technology, you had mentioned that once the well is  
11 drilled, the majority of the traffic is gone. When you  
12 drill that well, do you fracture north, east, south and  
13 west; or do you just fracture one, pull the gas out, then  
14 come back in and fracture again? Because my understanding  
15 is that you need a couple million gallons of water to do  
16 that, and so that would be probably truck traffic then.

17 MR. D'AMICO: Absolutely. Any time we are  
18 fracing or drilling a well, there's truck traffic involved.  
19 What I was talking about is after that initial period when  
20 that property is developed and we're now on production for  
21 the wells on that pad, then all that activity is pretty  
22 much died away.

23 REPRESENTATIVE KESSLER: So if you need -- and I  
24 have numbers of 3 million gallons. I mean, what kind of  
25 size tanker trucks are you bringing in carrying water?

1 MR. D'AMICO: Most of the trucks coming in are  
2 hundred-barrel trucks.

3 REPRESENTATIVE KESSLER: Okay. So fracturing  
4 can go on after the well's drilled, six months later on, a  
5 year, two years?

6 MR. D'AMICO: No, we're not talking about six  
7 months. It's usually within less than a month after the  
8 well's drilled is when you fracture. You want to go in and  
9 complete the well as quickly as possible. After you spend  
10 all that money, you want to try to get some kind of return  
11 on it.

12 REPRESENTATIVE KESSLER: But is there some point  
13 down the road you come in and try to fracture again then?

14 MR. D'AMICO: No, not normally.

15 REPRESENTATIVE KESSLER: Okay. Once it's  
16 fractured --

17 MR. D'AMICO: That's something we have not  
18 experienced in Pennsylvania, refracturing wells. Now,  
19 whether that's something that comes up on the Marcellus, I  
20 have no idea, but I don't expect it.

21 REPRESENTATIVE KESSLER: And then a typical  
22 well, how many employees are you talking about at the site?

23 MR. D'AMICO: On the site at any given time?

24 REPRESENTATIVE KESSLER: Yeah.

25 MR. D'AMICO: During the drilling operations

1 or --

2 REPRESENTATIVE KESSLER: After the drilling.

3 MR. D'AMICO: Afterwards. You know, one  
4 individual, one well tender can probably take care of  
5 multiple wells. There might be 20 to 25 wells, Marcellus  
6 wells. That's the well tender, but then you have  
7 compressor operators and you have some other associated  
8 jobs. There's a real good list that Penn College of  
9 Technology put together of what percentage of jobs are  
10 going to be at every level during the development of this.  
11 It makes a very good reading.

12 REPRESENTATIVE KESSLER: So once the drilling's  
13 done, are we looking at one, five, ten employees there, or  
14 how many on average?

15 MR. D'AMICO: In a township you mean, or --

16 REPRESENTATIVE KESSLER: No, I mean on the well  
17 site itself.

18 MR. D'AMICO: Well, at any given time, you're  
19 probably going to see one person on an individual well  
20 site. But there's people who are looking after that during  
21 the course of a day, and all the subsidiary production  
22 operations go with it, like compression, all the other  
23 things that are involved. You could probably assume one to  
24 two people per well are involved in an area.

25 REPRESENTATIVE KESSLER: Okay. Thank you.

1 CHAIRMAN LEVDANSKY: Thank you, Mr. D'Amico. I  
2 appreciate your attendance here today.

3 MR. D'AMICO: And I apologize for having to  
4 fight my voice here.

5 CHAIRMAN LEVDANSKY: I understand.

6 MR. D'AMICO: I hope somebody could hear me.

7 CHAIRMAN LEVDANSKY: Sure.

8 Finally, let me call on Mr. Daniel Fisher, the  
9 Superintendent of the Bald Eagle Area School District.

10 Mr. Fisher, is yours the PowerPoint  
11 presentation?

12 MR. FISHER: Yes, it is.

13 CHAIRMAN LEVDANSKY: Okay.

14 MR. FISHER: Good afternoon, Chairman Levdansky,  
15 Chairman Rohrer, and members of the House Finance  
16 Committee. I am the Superintendent of the Bald Eagle Area  
17 School District, and I represent many school districts here  
18 today, many school districts, I'm sure, just like the ones  
19 where you folks represent. Let me say right from the  
20 get-go that our school districts, Pennsylvania School Board  
21 Association strongly, strongly supports House Bill 10.

22 We feel that taking that part of our tax base  
23 from us, as was done with the Fayette County and IOGA  
24 decision in 2002, was a great injustice. And I have been  
25 superintendent long enough and business manager before that

1 to recall when we had the tax revenue coming in from, at  
2 that time, it was Eastern States Exploration. So I lived  
3 through it budgetarily for the past essentially 20 years.

4 And I would like to not read the -- first of  
5 all, I can't see the print on it to read it even if I  
6 wanted to. I know you've had the testimony. I would like  
7 to make one correction. We wish we had oil wells in our  
8 district, but we don't. But we do have quite a number of  
9 gas wells.

10 Would there be any objection to my standing?

11 Here we can see the Marcellus Shale deposit just  
12 in Pennsylvania. It does extend south and northsouth. As  
13 you can see, there are many, many school districts -- in  
14 fact, 207 of the 225 or 250 school districts that are below  
15 the median resource level, 207 according to PSBA  
16 information, 207 of them lie under the footprint of the  
17 Marcellus Shale.

18 Now, keep in mind, when the decision was made in  
19 2002, when we keep talking about fugacious -- and I can't  
20 help wonder how it can be more fugacious in Pennsylvania  
21 than it is in all the other states that have natural gas.  
22 But when we talk about fugacious, we were talking at that  
23 time not about the Marcellus Shale, but we are talking  
24 about the shallow wells. And we have essentially, right  
25 now, somewhere in the vicinity of 10 thousand shallow wells

1 in the Commonwealth of Pennsylvania, 10 thousand, and yet  
2 we hear this referred to as a nascent industry.

3 I'd like to, first of all, locate -- Bald Eagle  
4 Area's right there in Centre County. It's actually in the  
5 northern part of Centre County. You can see the Marcellus  
6 well permits there. You can also see the shallow well  
7 permits. And as you look, in 2009, there were 6,233  
8 permits. Of those, 4,249 were shallow wells; 1,984 were  
9 the Marcellus Shale wells.

10 That is a huge, a huge number of the gas  
11 industry in Pennsylvania, and this isn't just something  
12 that started. This has been going on for a hundred years.  
13 It was fairly new to Centre County. It has not gone on in  
14 Centre County for a hundred years, but I have heard of gas  
15 wells as early as the '30's in Centre County. Drilling in  
16 wells that were given by January 4, 2010, you can see a  
17 total of 9 wells drilled; 19 well pads sited; 25 permitted,  
18 but not drilled; wells and planning, 97, Centre County.

19 Centre County is not a huge state right  
20 now -- or excuse me -- is not a huge county where there's a  
21 lot of drilling going on compared to other counties in the  
22 Commonwealth. There you can see the wells that are  
23 actually, the Marcellus wells that are actually in our  
24 district. You can see Snowshoe Township. Most of them are  
25 in Burnside Township, and we'll get to Burnside Township a

1 little bit later.

2 Certainly and, again, not as much activity as  
3 there is elsewhere in Pennsylvania, but it's a lot of  
4 activity. Just as I left the parking lot today, I think I  
5 saw four or five trucks carrying well drilling equipment  
6 right past the parking lot. We see that very, very  
7 frequently. Here we are. You can see our school district  
8 in Centre County. We are the largest school district in  
9 Centre County. We cover about 340 acres. Most of our  
10 municipalities do not have gas.

11 They do not have Marcellus Shale gas. Most of  
12 the Marcellus Shale gas in Pennsylvania is located here in  
13 Burnside and Snowshoe Township, and this is part of the  
14 Phillipsburg Area School District, Rush Township. And  
15 there are quite a few permits issued, and there's a lot of  
16 drilling going on in Keystone Central School District. And  
17 earlier -- I wonder if I could turn the light on so we can  
18 see, please.

19 Earlier, I passed out our district newsletter,  
20 Eagle Pride. We publish this twice a year, and I'm sure  
21 that many of your districts publish the same thing. And in  
22 our community and in many rural communities, the school  
23 district is actually the community. We have construction  
24 people working on our school right now. They're working on  
25 our middle and high school, and they said they'd never

1 worked on a school like this; it never closes.

2 It's closed mostly on Sunday mornings, but I  
3 think we often forget how important schools are as parts of  
4 the community. How we finance those schools is another big  
5 challenge, and in the next few years, it's going to be a  
6 huge challenge. 45 of the 50 poorest schools in the  
7 district also lie under the Marcellus Shale deposit. All  
8 of our school districts, Bald Eagle included, throughout  
9 the state have huge pension increases coming.

10 All of our school districts have huge healthcare  
11 increases coming. And as we look beyond this coming year,  
12 and I suspect this budgetary year will be difficult  
13 too -- as we look beyond that, we have to look at all  
14 resources, all tax revenue, all potential tax revenue if,  
15 in fact, we're going to find any way to balance those  
16 budgets, any way essentially to not cut programs, any way  
17 to provide the services that all school districts are  
18 required to provide.

19 Back in 2002, Bald Eagle Area collected \$65  
20 thousand from natural gas tax. There you see Burnside  
21 Township. It's one of our three townships that had gas  
22 wells back in 2002, and you see essentially three wells  
23 there, 65 thousand. And at that point, if you look at our  
24 tax records, there were pages, pages of tax bills, some of  
25 them very small because some of them didn't produce much.

1 But there were pages of tax bills that were paid by Eastern  
2 States Exploration.

3 None of those tax bills, none of those tax bills  
4 on the mineral assessment, none of those were paid by the  
5 property owners. They were paid by the people who own the  
6 rights to drill for that gas. We go ahead to 2006. And,  
7 again, we're looking at Burnside Township, and we're  
8 looking at the number of wells in Burnside Township. Now,  
9 we heard earlier that the reason there are more wells is  
10 because the price of gas went up, and I suspect that's it.

11 But our revenue in 2006 was zero because of the  
12 Fayette County IOGA decision. It was zero. I calculated,  
13 just extrapolating for the number of wells that we see  
14 there, that our revenue, had that not happened, our revenue  
15 would be somewhere around a million-and-a-half dollars from  
16 those wells. So essentially, Bald Eagle Area School  
17 District and I'm going to guess hundreds of schools  
18 districts, or at least a hundred other school districts  
19 lost tax revenue, property tax revenue because of that  
20 decision.

21 Now, IOGA, in their quarterly newsletter at that  
22 point, said Christmas came early this year, and, in fact,  
23 you can look at the quarterly newsletter. It's on the web.  
24 What we would be receiving now, my estimate with the  
25 Marcellus Shale, is somewhere around 2 million a year. So

1 what happens to that 2 million a year? That 2 million a  
2 year then gets downloaded to people much less capable of  
3 paying that bill. Our property taxes have gone up with the  
4 index every year.

5           They'll go up with the index again this year,  
6 and that's going to happen throughout the Commonwealth.  
7 It's going to happen -- it's going to be particularly  
8 difficult for poor school districts such as ours and poor  
9 school districts such as the 200 that I mentioned earlier  
10 that lie within this Marcellus footprint. House Bill  
11 10 -- I don't know if Representative DeWeese is still here,  
12 but that bill will serve to correct this.

13           And that bill will serve to prevent a calamity  
14 in at least half of the poor school districts across the  
15 state. I know that the House Finance Committee has  
16 struggled with local property tax reform for years, maybe  
17 decades. Here's an opportunity for real reform, real  
18 reform in at least most of the districts and counties in  
19 Pennsylvania.

20           I feel like I'm talking to my -- I taught  
21 history for nine years. I feel like I'm talking to my  
22 ninth period class here, but thank you. Thank you so much  
23 for your attention and for having us here to talk about it.  
24 Are there any questions?

25           CHAIRMAN LEVDANSKY: Thank you, Mr. Fisher.

1 There's not a lot of members to recognize for questions  
2 except Representative Mirabito.

3 Rick?

4 REPRESENTATIVE MIRABITO: You know I could  
5 probably ask a question.

6 Do you have any other numbers? I mean, I think  
7 that's, what you said is very significant about the \$2  
8 million being passed on to other taxpayers. Do you or does  
9 the School Board Association have a breakdown  
10 county-by-county or school district-by-school district?

11 MR. FISHER: I don't have the breakdown other  
12 than what I gave you for the Bald Eagle Area School  
13 District. I'm sure that our folks at PSBA could provide  
14 that, and we can ask them to get that to you.

15 REPRESENTATIVE MIRABITO: That'd be helpful.  
16 Thank you.

17 CHAIRMAN LEVDANSKY: All right. Okay.  
18 Mr. Fisher, just curious, Burnside Township, where is that  
19 relative to Rush Township?

20 MR. FISHER: It's north of it and essentially  
21 west of it a little. Take a look at it. Burnside would be  
22 here, and Rush would be here.

23 CHAIRMAN LEVDANSKY: So Rush is in the  
24 Phillipsburg School District?

25 MR. FISHER: Yes.

1           CHAIRMAN LEVDANSKY: Okay. There has been an  
2           uptick in obviously drilling in your school district and  
3           your county. I mean, has the school district had any  
4           increased costs relative to more kids coming, more kids  
5           enrolled in your school district because of drilling  
6           activity? Could you point to any fiscal impact of the  
7           drilling?

8           MR. FISHER: In my presentation, I did point to  
9           the different areas throughout the country, in Texas, in  
10          Arkansas, where they had as much as a 131 percent increase.  
11          We have not seen that increase as of yet. I suspect we  
12          will. What we're seeing right now for the most part, as  
13          was mentioned earlier, people who are living in hotels and  
14          their families are remaining in Texas or wherever they're  
15          from.

16          But I think as this develops, I think  
17          that's -- if you look at the increases in population -- and  
18          I have some of those, if you'd like to take a look at them,  
19          on the PowerPoint, but they're very, very pronounced. I  
20          think the other thing that sort of fits together is sort of  
21          a syndetic relationship between the counties and the  
22          municipalities. Particularly for the Marcellus Shale, they  
23          need a lot of water, and they also need treatment  
24          facilities.

25          And frankly, most of our rural areas, our rural

1 school districts need both of those too. We need water  
2 lines extended, and we need treatment facilities. One of  
3 the things that precludes development in Bald Eagle Area  
4 and in many rural districts is they don't have on-site  
5 sewage or water. And we have right next to us, right over  
6 the ridge where both State College and Bellefonte have  
7 those available.

8 We see vibrant developments going on there.  
9 Those same developments can't go on in our rural  
10 municipalities, and it can't go on in many of them  
11 throughout the state because of the lack of the sewage and  
12 water availability. But I think this is an opportune time  
13 where those two goals could be pursued in our rural  
14 communities.

15 CHAIRMAN LEVDANSKY: All right. Okay. Seeing  
16 no other members with questions, I appreciate your  
17 testimony and your traveling here to testify today and your  
18 written presentation as well. I'm familiar with your neck  
19 of the woods up there. I've stepped --

20 MR. FISHER: I saw you were. You're a Penn  
21 State grad.

22 CHAIRMAN LEVDANSKY: A Penn State grad and spent  
23 more than a couple days fishing on Bald Eagle Creek, not  
24 too far from the Windgate Elementary School down there.

25 MR. FISHER: You're welcome back any time.

1 CHAIRMAN LEVDANSKY: Beautiful country up there.

2 MR. FISHER: Thank you very much.

3 CHAIRMAN LEVDANSKY: This concludes today's  
4 Finance Committee meeting on House Bill 10. Thank you.

5 (The hearing was concluded at 3:35 p.m.)
