## I N D E X

## OPENING REMARKS

By Chairman 3 - 8

## STATEMENT

By Mr. Foreman 8 - 15

## TESTIMONY

By Mr. West 21 - 27

By Ms. McClure 37 - 41

By Mr. Resh 51 - 59

By Mr. Ruddock 70 - 78

By Mr. Bertolino 82 - 88

By Mr. Barnhart 94 - 101

By Ms. Braverman 105 - 115

By Mr. Stewart 117 - 125

DISCUSSION AMONG PARTIES 125 - 129

## P R O C E E D I N G S

1  
2 -----  
3 CHAIRMAN:

4 Good evening. I'm David Levdansky.  
5 I'm the Chairman of the House Committee and the House  
6 of Representatives, and I represent the 39th  
7 Legislative District in Allegheny and part of  
8 Washington County. We're here this evening as the  
9 first of three hearings this week of the Finance  
10 Committee traveling across the state to get the  
11 public input and testimony and thoughts about the  
12 idea of a natural gas severance tax, specifically  
13 legislation that I've introduced House Bill 2443. So  
14 we're beginning our statewide hearings on the subject  
15 here in beautiful warm, sunny Indiana. Not quite,  
16 huh?

17 But I just want to welcome all of you.  
18 And I first would like to recognize my colleague on  
19 the House Finance Committee, your State  
20 Representative here from Indiana County,  
21 Representative Dave Reed. Dave?

22 REPRESENTATIVE REED:

23 Thank you. I just want to express my  
24 gratitude to the Chairman for hosting this committee  
25 hearing here in Indiana County. You know, the

1 severance tax has been a discussion over the last  
2 year and a half, two years. And no matter what you  
3 feel about the severance tax, I personally had hoped  
4 that it would have been part of a broader discussion  
5 on a restructuring of our entire business tax  
6 structure as to what is the appropriate way to tax  
7 any given industry and what's, you know, some taxes  
8 that maybe have seen their time, run its course. But  
9 if we're not going to discuss the entire business tax  
10 structure in a year like this, if we're going to  
11 discuss the severance tax, I think for a community  
12 that has seen the impacts of drilling for many  
13 decades now and continues to thrive both  
14 economically, as well as both trying to protect our  
15 environmental assets as a result of the industry.

16 I think one of the things that we want  
17 to ensure happens if there's severance tax, that  
18 those dollars, at least in large portion, come back  
19 to the local communities that see the impact. I  
20 think what we don't want to have happen is to see a  
21 severance tax just used to balance the budget in  
22 Harrisburg to be spent in far off places, more or  
23 less the southeastern portion of the state, for  
24 projects that are unrelated to the impacts of  
25 drilling. We'd like to see as much of this money go

1 back locally to help offset those impacts and help  
2 ease the burden upon local governments, particularly  
3 townships, boroughs and counties that have to make up  
4 the differences for the impacts that have occurred  
5 over the years.

6 So I appreciate the Chairman for  
7 hosting this hearing and look forward to this  
8 discussion.

9 CHAIRMAN:

10 Thank you, Dave. Before we get  
11 started, just a bit of official housekeeping, I'd  
12 like to have my staff call the roll.

13 MR. FOREMAN:

14 Chairman Levdansky?

15 CHAIRMAN:

16 Here.

17 MR. FOREMAN:

18 Tim Briggs?

19 REPRESENTATIVE BRIGGS:

20 Here.

21 MR. FOREMAN:

22 Flo Fabrizio? On leave. Dan Frankel?

23 CHAIRMAN:

24 On leave.

25 MR. FOREMAN:

1 Jarret Gibbons?

2 REPRESENTATIVE GIBBONS:

3 Here.

4 MR. FOREMAN:

5 Dave Kessler? Leave. Bill Kortz?  
6 Leave. Richard Miribito? Leave. John Pallon?  
7 Leave. Sainato? Leave. Tim Seip? Leave. Josh  
8 Shapiro? Leave. Rick Taylor? Leave. Rosita  
9 Youngblood? Leave. John Yudichak? Leave. Sam  
10 Rohrer? Leave. John Bear? Leave. Scott Boyd?  
11 Leave. James Cox? Leave. Gordon Denlinger? Leave.  
12 Brian Ellis? Leave. Adam Harris? Leave. Michael  
13 Peifer? Leave. Thomas Quigley? Leave. Dave Reed?

14 REPRESENTATIVE REED:

15 Here.

16 MR. FOREMAN:

17 Mario Scavello? Leave.

18 CHAIRMAN:

19 I'd also like to have the other two  
20 members of the Committee sitting to my right and left  
21 introduce themselves.

22 REPRESENTATIVE BRIGGS:

23 Tim Briggs from the 149th District,  
24 which is in Montgomery County in southeastern  
25 Pennsylvania. And I'm really looking forward to a

1 good discussion. We don't have drilling in my neck  
2 of the woods, but we're going to have some challenges  
3 ahead of us, and I'd like to get the take from  
4 Indiana County and from the testifiers today. So  
5 looking forward to it.

6 REPRESENTATIVE GIBBONS:

7 I'm Representative Jarret Gibbons from  
8 --- well, I'm from the Elwood City area, Lawrence,  
9 Beaver and Butler Counties. They're all made up of  
10 --- parts of those make up my district. And again,  
11 like Tim, I am very interested in hearing what you  
12 have to say today. They actually drilled the first  
13 Marcellus well in my district, in northeast Beaver  
14 County late last year. And we're looking forward to  
15 seeing what we can do with this growing industry in  
16 our region. So thank you, Mr. Chairman.

17 CHAIRMAN:

18 We appreciate, you know, all of you  
19 traveling to be here this evening. Before we begin  
20 the public testimony part of it, I'd just like to  
21 recognize my staff, Mark Foreman, as the research  
22 analyst that works for me in the House Finance  
23 Committee. Mark's assisted me over the last year  
24 looking at a whole lot of different aspects relative  
25 to Marcellus Shale and especially the severance tax

1 issue, and has assisted me in developing House Bill  
2 2443, which is a bit different than the two other  
3 pieces of legislation that have been introduced to  
4 date on this subject.

5 My aim in doing this is to start --- is  
6 to begin to get some discussion about how to  
7 implement a gas severance tax at least for myself.  
8 You know, I have already answered the question that I  
9 believe we should do it. Now, obviously the majority  
10 of the House and Senate members will weigh in and  
11 make that decision, but anticipating that enough ---  
12 that a majority of my colleagues will agree that we  
13 need to put in place a reasonable severance tax, the  
14 question then for me becomes how do you do it. How  
15 do you put a levy in place that is not overly  
16 burdensome on industry, that is relatively  
17 efficiently collected and importantly what do you do  
18 with the revenues that flow from it? And my proposal  
19 differs from the other two in those two areas, how do  
20 you collect the revenue and how do you distribute it.

21 So I'd just briefly like to have my  
22 staff explain the differences of my approach compared  
23 to the other two pieces of legislation introduced.  
24 Mark?

25 MR. FOREMAN:

1           Thank you, Chairman. As he said, we  
2 discussed beforehand that maybe the best way to start  
3 it off would be to just go over differences, no  
4 policy aspect, none of that. Just if you're going to  
5 assess the severance tax, there are two proposals  
6 really out there. One was brought up --- brought  
7 from the administration. It was mostly encapsuled in  
8 House Bill 1489, which was introduced by Chairman  
9 George and the Environmental Researches Committee.  
10 If you have this paper in front of you, it's a  
11 side-by-side comparison. You'll see 1489 on the top,  
12 House Bill 2438 is a bill introduced by Dwight Evans,  
13 Chairman of the Appropriations Committee. And House  
14 Bill 2443 is obviously the subject of tonight, and  
15 that's Dave's bill.

16           There are --- it started really as  
17 reviewing 1489 and determining that there were some  
18 concerns we had relative to how you would practically  
19 asses and collect the tax. And then we moved into,  
20 as the Chairman said, distribution, and we felt there  
21 was some differences you could make there, and that's  
22 what I'm going to go over.

23           First of all, a little definition that  
24 would help everyone. If you were to go on, for  
25 instance, The Wall Street Journal website and you can

1 look at Henry Height (phonetic) --- excuse me, Henry  
2 Hub commodity prices, so you could find gold, iron,  
3 everything that they trade as a commodity. One of  
4 them is natural gas. And you'll see a price, much  
5 like what is the price of gas at the pump, you know,  
6 if it's \$2.85 per gallon. Natural gas is measured by  
7 a thousand cubic feet. That's how it's marketed. So  
8 if you were to go on that website and you'd see, like  
9 I did this morning, yesterday's price closed at  
10 \$4.09. That's by thousand cubic feet. And that's  
11 called a unit. So you'll find in all of the bills,  
12 the way you would tax or the measurement would be by  
13 a unit and a unit is a thousand cubic feet, so that's  
14 important to keep in mind.

15           The tax rate under the administration's  
16 proposal, House Bill 1489, it's a two-part proposal.  
17 The first part would be per volume, they collect 4.7  
18 cents per thousand cubic feet. That would be less  
19 significant than the second portion of the proposal,  
20 which would be five percent of what they determine is  
21 gross value per month. So every month you would have  
22 to, based on sales meters they have --- which would  
23 be --- they described that with a formula. It's  
24 called a gross value formula, where based on the  
25 readings from the sales meters, which is where gas

1 hits the market, you would come up with a monthly  
2 average price of gas. And per unit that is severed  
3 from the wellhead, you would owe five percent of that  
4 monthly price. So that means every month producers  
5 would have to come up with their gross value, find  
6 five percent of that, and they would owe that amount  
7 on every thousand cubic feet plus the 4.7 cents on  
8 every thousand cubic feet. So for example, if gas  
9 were at \$5, five percent would be 25 cents. So per  
10 unit, you would be paying 25 cents, which is the five  
11 percent. And you would be paying 4.7 cents, so  
12 effectively 29.7 cents if the price of gas that month  
13 was \$5.

14                   Now, that differs from House Bill 2443,  
15 because in House Bill 2443, there is only a per  
16 volume tax. So no matter what the price of gas is  
17 that month, it's purely on extraction at the  
18 wellhead. Every gas producer has a wellhead meter at  
19 the well. It would record the number. It would be  
20 as simple as taking that number and dividing it by a  
21 thousand and that's how many units were produced  
22 during a certain reporting period. In House Bill  
23 2443, they would have to report quarterly, so four  
24 times a year. Under the other proposals, House Bill  
25 1489, for instance, it's a monthly --- a monthly

1 reporting period. So there's a big difference there  
2 between assessing really the gross receipts and then  
3 as opposed to per volume.

4           Also under House Bill 2443, under the  
5 per volume, you can look at it as instead of assuming  
6 inflation, instead what you would do to --- once a  
7 year annually, there would be an allowance for an  
8 adjustment. You would take those Henry Hub spot  
9 prices that you could find online, you take the last  
10 --- on the last trading day of every month. So March  
11 31st, April 30th, May 31st, you would get 12 numbers  
12 for an entire year, and you'd find that average price  
13 of gas. Over the last year, the average would have  
14 been about \$4. So you would do --- you would take  
15 that average number, let's say, \$4 and divide that by  
16 five percent, which is 20 cents. And if the price is  
17 less than 25 cents, the rate would remain at 25 cents  
18 per thousand cubic feet. If that average price was  
19 higher than 25 cents, you would be able to adjust the  
20 rate for the next fiscal year at half of the  
21 difference. And I know that's confusing, but I'll  
22 try to put it in an example. If the price of gas  
23 were \$8, if the average price of gas over an entire  
24 year were \$8, you would take five percent of that  
25 number, which I'm sorry I'm trying to do the

1 calculation in my head, I believe it would be 40  
2 cents. Forty (40) cents. So the difference between  
3 25 and 40 is roughly at about 32 and a half cents,  
4 and that would be the next fiscal year's rate, would  
5 be 32 and a half cents per thousand cubic feet. And  
6 if the next year the price of gas dipped down to \$3,  
7 and therefore that five percent of the average would  
8 be less than 25 cents, the rate would remain at 25  
9 cents.

10 So it creates a floor revenue for the  
11 state, but at the same time gives the industry some  
12 room to not have such a gamble with what tax rate  
13 they're going to pay. Because really if you use  
14 monthly prices of gas, you know, it's hard to predict  
15 that. In fact, it's hard to really come up with a  
16 projection for revenue, whereas if you told me  
17 exactly how much gas was being produced, I could tell  
18 you what this proposal will generate because,  
19 obviously, you could take that total amount divide it  
20 by a thousand and times it by the tax rate.

21 CHAIRMAN:

22 Mark, if you just move onto the  
23 distribution?

24 MR. FOREMAN:

25 Sure. And that's next, distribution.

1                   CHAIRMAN:

2                   Because I think that's probably what  
3 most people ---.

4                   MR. FOREMAN:

5                   Okay. Distribution. As you'll see on  
6 here, House Bill 1489 takes 60 percent of the overall  
7 revenue and give it to the General Fund. And House  
8 Bill 2438, they want to give 90 percent overall to  
9 the General Fund. In House Bill 1489, the local  
10 shares would be four and a half percent for counties  
11 and four and a half percent for municipalities, and  
12 that's based on production and the way you break that  
13 up to go to the various municipalities. That's a  
14 total of nine percent. Under House Bill 2438, it  
15 would be ten percent split in a half, so it's really  
16 45 --- four and a half percent and five percent.  
17 Under House Bill 2443, the share is 20 percent to  
18 locals.

19                   And that's broken down further,  
20 30 percent of that amount goes to counties where  
21 drilling takes place, 60 percent would go to  
22 municipalities where drilling takes place, both host  
23 and nonhost. And there's a formula, so that if  
24 you're a host community, you would receive a prorata  
25 share slightly more than a nonhost. But if you're in

1 a county where drilling is taking place, and you're a  
2 municipality, whether you have actual wells in your  
3 municipality or not, you would still receive a share  
4 of the funding. And a small portion of that  
5 set-aside amount for the local shares would go to  
6 volunteer fire and EMS services within those  
7 counties.

8 Also under House Bill 2443, which isn't  
9 in any of the other proposals, is money to go to the  
10 county Conservation Districts, which has been a point  
11 for many members that they'd like to see money go to  
12 that. So money was set aside for that under House  
13 Bill 2443 as well. Does anybody have any questions?

14 CHAIRMAN:

15 Representative Reed?

16 REPRESENTATIVE REED:

17 Just a couple questions, so I can make  
18 sure I understand the distribution side of the  
19 formula. Under your definition of producing site as  
20 it qualifies for credits, the severance tax you're  
21 not applying to so-called stripper wells, are they  
22 included as producing sites?

23 MR. FOREMAN:

24 No. Stripper wells would be exempt  
25 from the tax, and you actually bring up a technical

1 point that would need to be fixed in an amendment for  
2 --- in the committee, which would be that the portion  
3 that --- the local share portion that talks about  
4 producing sites, it would have to be --- it would  
5 have to specifically say only on wells that are taxed  
6 under this tax. So stripper wells would not apply.

7 REPRESENTATIVE REED:

8 If you agree with that concept?

9 MR. FOREMAN:

10 Right.

11 REPRESENTATIVE REED:

12 Because a lot of us come from regions  
13 that have been drilling for decades and have those  
14 impacts that would qualify under stripper well, so  
15 they would not be taxed, but I think, you know, ---.

16 MR. FOREMAN:

17 In all of the proposals stripper wells  
18 up to 60,000 feet --- or 60,000 cubic feet per day  
19 are exempt.

20 REPRESENTATIVE REED:

21 Under the proposal as written, though,  
22 they would still count as credits toward a local  
23 municipality ---

24 MR. FOREMAN:

25 Yes.

1                   REPRESENTATIVE REED:

2                   --- or county share ---

3                   MR. FOREMAN:

4                   Yes.

5                   REPRESENTATIVE REED:

6                   --- unless it were changed?

7                   MR. FOREMAN:

8                   Yes.

9                   REPRESENTATIVE REED:

10                  Okay. My second question would be on  
11 the municipality allotment, where for each  
12 municipality with a producing site shall be given two  
13 credits per producing site.

14                  MR. FOREMAN:

15                  Right.

16                  REPRESENTATIVE REED:

17                  And then part B, each municipality  
18 where there's no producing site shall receive one  
19 credit.

20                  MR. FOREMAN:

21                  Right.

22                  REPRESENTATIVE REED:

23                  Is that one credit total if there's  
24 producing sites in that county or is that one credit  
25 per producing site in that county?

1                   MR. FOREMAN:

2                   No. It would be one credit for that  
3 municipality.

4                   REPRESENTATIVE REED:

5                   Okay. So they'd get one credit total.  
6 If we've got a borough with no drilling, they're  
7 getting one credit total. If we've got a township  
8 with 50 wells, they're going to get a hundred  
9 credits?

10                  MR. FOREMAN:

11                  Yes. Yes.

12                  REPRESENTATIVE REED:

13                  Okay.

14                  MR. FOREMAN:

15                  Only within counties where drilling is  
16 taking place.

17                  REPRESENTATIVE REED:

18                  Yes. My third question would be, is  
19 there any difference between the credit allotment for  
20 traditional shallow well permitted wells and  
21 Marcellus Shale permitted wells?

22                  MR. FOREMAN:

23                  (Indicates no.)

24                  REPRESENTATIVE REED:

25                  And that's one suggestion that I would

1 have. I know the impacts of Marcellus Shale wells is  
2 somewhat much more significant than a traditional  
3 well. That what you may want to do is adjust the  
4 credit allotment. And I know DEP with the way they  
5 permit the wells, they can actually give you a  
6 breakdown of what are Marcellus Shale permitted well  
7 and what are conventional wells, so you may want to  
8 up the ante a little bit for the Marcellus Shale  
9 wells while keeping the traditional well credits in  
10 as is.

11 MR. FOREMAN:

12 One of the constructive criticisms that  
13 have come to the bill since we introduced it was  
14 better defining producing site under that definition.  
15 So you know, again, you know, I don't know where it  
16 will end up, but that was something we're aware of.

17 REPRESENTATIVE REED:

18 It's just a suggestion ---

19 MR. FOREMAN:

20 Yes.

21 REPRESENTATIVE REED:

22 --- to we do want to treat those two a  
23 little bit differently.

24 MR. FOREMAN:

25 We're aware.

1                   REPRESENTATIVE REED:

2                   The section, the 22 percent that goes  
3 to the Environmental Stewardship Fund, is that ---?

4                   MR. FOREMAN:

5                   I'm sorry. I forgot to mention that,  
6 so that's one --- under the other proposals --- well,  
7 under 2438, none would go to the Environmental  
8 Stewardship Fund. Under 1489, 15 percent would go  
9 there. So it's increased in this bill.

10                  REPRESENTATIVE REED:

11                  This bill, does it limit that that  
12 money going into the Environmental Stewardship Fund  
13 must come back to the communities that have producing  
14 sites or can that money go to ---

15                  MR. FOREMAN:

16                  There is no language.

17                  REPRESENTATIVE REED:

18                  --- whatever community out there? That  
19 would be another suggestion that I would have, if  
20 we're going to reap the revenues from this, that you  
21 restrict those funds to actually going back to  
22 projects in communities that have the impact of  
23 drilling. And I do apologize, Mr. Chairman, for  
24 bringing this up now, but I think a lot of the  
25 testifiers may want to comment on some of these

1 topics as we go throughout the hearing.

2 My last question would be on the  
3 Conservation District section, the three percent  
4 dedicated to Conservation District. Are we carving  
5 that three percent out to the districts that actually  
6 have an impact for drilling or is that money going to  
7 each and every district whether they have an an  
8 impact from drilling or not?

9 MR. FOREMAN:

10 Again, the money would just be going to  
11 the Conservation District fund that the administrators  
12 of that fund would be responsible for.

13 REPRESENTATIVE REED:

14 That would be another suggestion that I  
15 have for consideration, that we actually restrict the  
16 revenues going back to the communities that have felt  
17 the impact from drilling occurring. Thank you very  
18 much, Mr. Chairman. Thank you, Mark, for your  
19 comments.

20 CHAIRMAN:

21 Yes. With that, let me call as the  
22 first to testify, Kevin West. Kevin is the  
23 management director of external affairs with EQT  
24 Corporation of Pittsburgh.

25 MR. WEST:

1           Thank you, Mr. Chairman, members of the  
2 committee. If I could, I do have a handout that will  
3 just help you maybe follow my testimony a little bit  
4 better. Mr. Chairman and members of the Committee,  
5 my name is Kevin West. I'm the managing director of  
6 external affairs for EQT Corporation. EQT  
7 Corporation is a proud Pennsylvania company that has  
8 been operating in Pennsylvania for over 100 years.  
9 Our predecessor drilled the first natural gas well in  
10 Murrysville, Pennsylvania in 1878. And so we're  
11 very interested in participating in this legislative  
12 process, because we are a Pennsylvania company.  
13 We're headquartered in Pennsylvania, and our history  
14 and our tradition is Pennsylvania. We're the largest  
15 Appalachian producer of natural gas. We have a \$4  
16 billion economic impact in the four states we  
17 operate. A billion of that is --- almost a billion  
18 of that is in the Commonwealth of Pennsylvania.

19           We have 4,800 producing natural gas  
20 wells in Pennsylvania. We've been an industry leader  
21 in horizontal air drilling, which we're very proud  
22 of, because that has enabled us to maximize the  
23 recovery of the natural gas resource here in  
24 Pennsylvania while minimizing the impact on the  
25 surface, because you can drill a number of horizontal

1 wells from a single pad and increase the recovery of  
2 the natural gas.

3           In 2009, we had capital investment in  
4 Pennsylvania of \$138 million, charitable  
5 contributions of \$2 million, paid state and local  
6 taxes of almost \$11 million and had an economic  
7 impact of almost a billion dollars. We have 898  
8 employees located in the Commonwealth, and that does  
9 not include the many contractors which we use to  
10 prepare roads, to do the drilling, to do completions,  
11 to build pipelines for our operations here in  
12 Pennsylvania.

13           We've been here a long time, but we ---  
14 really we're not involved in drilling as many wells  
15 as we have been in the last couple of years, because  
16 advances in technology have allowed us, as well as  
17 other companies, to access some shale reserves,  
18 namely the Marcellus, which were not available prior  
19 to the advent of horizontal drilling, which our  
20 company is proud to have been involved in, in helping  
21 perfect. We have almost a half a million acres  
22 overall in the Marcellus plain in Pennsylvania,  
23 looking at slide six. We drilled 46 wells, Marcellus  
24 wells, in Pennsylvania in 2009, and have plans to  
25 drill 47 in 2010.

1           We think this is a great opportunity  
2 for the Commonwealth of Pennsylvania, not just from  
3 the standpoint of the revenue that we'll realize from  
4 the natural gas production which will occur, but also  
5 because it's a great opportunity to help bring  
6 industry to Pennsylvania that would rely upon natural  
7 gases, heater type fuel source or feedstock for  
8 manufacturing. And we're working hard to do that.

9           Slide seven speaks a little bit to the  
10 economic impact of the Marcellus Shale. The first  
11 three items there, the 2008, the 2010 and the 2020  
12 projections with regard to jobs and economic impact  
13 come from the Penn State study. Realizing there has  
14 been some debate as to, you know, what the actual  
15 economic impact will be with regard to the Marcellus  
16 Shale here in Pennsylvania. Suffice it to say that  
17 whatever position you take as to what the exact  
18 number is, certainly there is going to be, and has  
19 been, a positive impact as a result of the production  
20 of this mineral resource that Pennsylvania is blessed  
21 and lucky to have.

22           The new industry part of it, we have  
23 estimated could mean, you know, in a couple of  
24 decades producing up to a half million jobs. And  
25 that's not just related to the natural gas production

1 but, as I've said, to industry that could be coaxed  
2 to come to Pennsylvania because of the ready  
3 availability of the natural gas resource here.

4 I guess that brings us to the issue at  
5 hand. At EQT, we have consistently, for a period of  
6 over a year now, advocated a comprehensive  
7 legislative approach with regard to the Marcellus  
8 Shale, which would include a balanced, fair severance  
9 tax with proceeds returned to local governments. I  
10 think my testimony with regard to that issue would  
11 probably echo Representative Reed's comments at the  
12 beginning of the hearing. We believe that it is  
13 important that the revenues that are generated as a  
14 result of any severance tax that would be enacted go  
15 back to the localities where the drilling occurs,  
16 because those are the folks that are living in the  
17 areas that both benefit and are impacted by the  
18 production of the natural gas.

19 We also believe that it's important  
20 that any severance tax that is enacted be coupled  
21 with some legislative enactments, which take into ---  
22 would take into account that Pennsylvania's current  
23 natural gas statutes are a bit antiquated. Not  
24 because we're backwards, but because until a couple  
25 of years ago, there had not been as much natural gas

1 production here as there has been in other states  
2 which have more moderate statutes which envision  
3 horizontal drilling, which envision developments with  
4 regard to production technologies that were not in  
5 existence when Pennsylvania's current statutes were  
6 enacted. Those would include state control of the  
7 regulatory process.

8           We believe it's important that there be  
9 a uniform system of regulation across the state with  
10 regard to production, fair pooling and utilization  
11 that would encourage maximization of the recovery of  
12 the resource, discourage waste, and very importantly  
13 would make sure that all mineral owners would be able  
14 to participate in any wells that are drilled and be  
15 able to benefit from royalty revenue from the natural  
16 gas production.

17           We advocate balanced surface owner  
18 rights legislation, which recognizes that surface  
19 owners should be given an opportunity to have an  
20 opportunity if there are impacts upon their surface  
21 lands, a mechanism to ensure that they have an  
22 opportunity to be heard with regard to any impacts  
23 that they have.

24           And then finally, an amendment of the  
25 Gas Coal Coronation Act to permit multiple wells per

1 pad over coal producing areas. And we feel that this  
2 is of a very important provision, because it would  
3 enable an increase in the amount of horizontal wells  
4 that would be drilled, which would minimize the  
5 impact upon the surface because it would allow the  
6 production of more natural gas from a concentrated  
7 area than is possible under the current statute.

8           So all and all, you know, our position  
9 is that we do not appose the severance tax. We  
10 advocate that a severance tax be enacted by the  
11 General Assembly, as long as it is releasable tax,  
12 the tax revenues are returned to the local government  
13 and it's part of a comprehensive legislative package  
14 that addresses these other important issues with  
15 regard to what we ask, development in Pennsylvania.  
16 Thank you.

17           JUDGE GUYTON:

18           Thank you. Any questions from members?  
19 Representative Reed?

20           REPRESENTATIVE REED:

21           Just real quick, when you give the job  
22 estimate, the 500,000, half a million jobs, with the  
23 new industry and development in the state, what tax  
24 structure do you assume when doing that study? And I  
25 assume it wasn't EQD --- EQT who did the study.

1                   MR. WEST:

2                   Yeah.

3                   REPRESENTATIVE REED:

4                   But whoever did, did they assume the  
5 current tax structure? Did they assume A severance  
6 tax is applied? If they did assume a severance tax  
7 is applied, which model, West Virginia, Arkansas,  
8 Louisiana?

9                   MR. WEST:

10                  Sure. The figures with regard to jobs  
11 and economic impact are probably a little more  
12 precise than that. That is an educated guess with  
13 regard to --- it is not based upon any economic study  
14 that was done. I think that we would envision that  
15 any economic model that would be applied in doing  
16 such a job estimate would take into account that  
17 there would probably be a severance tax in most of  
18 the oil and gas states, where --- in most states  
19 where there is oil and gas production, there is a  
20 severance tax of some shape or form.

21                  REPRESENTATIVE REED:

22                  I would just assume that, you know,  
23 when you make those estimates, that you're looking  
24 not just at the severance tax but the corporate tax  
25 structure, the property tax structure, ---

1           MR. WEST:

2           Absolutely.

3           REPRESENTATIVE REED:

4           --- permitting fees, the regulatory  
5 process? So there's a little bit more involved than  
6 just saying, you know, we have a severance tax, we  
7 don't have a severance tax.

8           MR. WEST:

9           Right.

10          REPRESENTATIVE REED:

11          You're looking at the total tax burden  
12 to accomplish the goal of ---

13          MR. WEST:

14          Right.

15          REPRESENTATIVE REED:

16          --- natural gas exploration in a  
17 community or in state?

18          MR. WEST:

19          When you make decisions with regard to  
20 where you're going to locate your drilling capital  
21 and your drilling dollars, you have to package all  
22 those taxes together, as you know, and come up with  
23 an effective rate which relates, you know, which  
24 would accurately predict your cost of doing business.

25          REPRESENTATIVE REED:

1                   If I could just ask one question to  
2 make sure.

3                   MR. WEST:

4                   Sure.

5                   REPRESENTATIVE REED:

6                   I think I understand one of your four  
7 initiatives, fair pooling legislation.

8                   MR. WEST:

9                   Correct.

10                  REPRESENTATIVE REED:

11                  Now, just in layman's terms, that  
12 someone can describe to me is if you've got 15  
13 landowners who own the natural gas rights in a  
14 community and you've got one landowner that happens  
15 to be strategically located in the middle that would  
16 prevent the other landowners from successfully  
17 leasing and producing natural gas on their  
18 properties, that that holdout landowner would be  
19 forced into an agreement to recover the natural gas?

20                  MR. WEST:

21                  Right. There would be a statutory  
22 mechanism that would enable the production of that  
23 natural gas without that --- that minority landowner  
24 from preventing the others from being able to benefit  
25 from production. They would be compensated and would

1 would be given alternatives as far as how they were  
2 compensated, either by participating in the well,  
3 participating in the well on a basis where basically  
4 they would be financed or in receiving a royalty just  
5 like the other landowners would.

6 REPRESENTATIVE REED:

7 I will say I do have some concern with  
8 that initiative, just because it appears as though  
9 you're almost giving eminent domain rights to a  
10 private corporation for development within the  
11 Commonwealth of Pennsylvania. And that would  
12 certainly set a precedent for other industries that  
13 would probably love to have eminent domain rights as  
14 well. So I think of your four initiatives, in my  
15 mind, that's definitely the most controversial and  
16 has the most wide reaching impact on private property  
17 rights in the state. So I mean, that's a discussion  
18 for another day. But since you pointed out, I just  
19 did want to mention ---

20 MR. WEST:

21 Sure.

22 REPRESENTATIVE REED:

23 --- my concern with giving that sort of  
24 control over to a private sector company. But thank  
25 you very much for your testimony. Appreciate it.

1                   MR. WEST:

2                   Thank you.

3                   CHAIRMAN:

4                   Just a follow-up of Mr. West. EQT  
5                   drills in other states as well, I see West Virginia,  
6                   Kentucky.

7                   MR. WEST:

8                   And Virginia.

9                   CHAIRMAN:

10                  And Virginia. Do you pay severance tax  
11                  in those states?

12                  MR. WEST:

13                  We do.

14                  CHAIRMAN:

15                  Okay. So to the extent that we would  
16                  have a severance tax in Pennsylvania, as long as it  
17                  is comparable to our competitor states, it wouldn't  
18                  put you at a competitive disadvantage?

19                  MR. WEST:

20                  No. You know, it's a --- getting, I  
21                  guess, back to Representative Reed's comments, you  
22                  would have to look at the total tax structure of a  
23                  particular jurisdiction. But you're right, we do pay  
24                  severance tax in each of those other jurisdictions.

25                  CHAIRMAN:

1                   Okay.  EQT, is it a registered C  
2 Corporation:

3                   MR. WEST:

4                   It is.

5                   CHAIRMAN:

6                   So you pay a corporate net income tax.  
7 And if we had a severance tax, you would pay that as  
8 well?

9                   MR. WEST:

10                  Correct.

11                  CHAIRMAN:

12                  That contrasts with a number of other  
13 drillers in the state.  I believe two-thirds of the  
14 --- two-thirds of the Marcellus wells drilled in  
15 Pennsylvania last year were drilled by companies that  
16 had formed LLC subsidiaries, meaning they didn't pay  
17 corporate net income taxes.  They paid the personal  
18 income tax, just like every worker in the state pays  
19 at 3.07.  So we have a lot of drilling going on in  
20 Pennsylvania then, where they don't pay the corporate  
21 income tax.  So it would seem to me even if we didn't  
22 have a severance tax, EQT is at a disadvantage  
23 insofar as you're paying corporate net income taxes  
24 and the others aren't.

25                  MR. WEST:

1 I'm not familiar with what the others  
2 are doing. But you're correct we do, we pay the full  
3 load so ---.

4 CHAIRMAN:

5 Okay. Another factor in the cost of  
6 gas and doing business is transportation charges. My  
7 understanding that Federal Energy Regulatory  
8 Commission has basically done a study that indicated  
9 that about 40 percent of the cost of gas is  
10 transportation. EQT is a native Pennsylvania  
11 company. You drill for gas in Pennsylvania. We use  
12 it. But there's a lot of gas that --- most of the  
13 gas that's used in Pennsylvania comes from outside of  
14 Pennsylvania. So Pennsylvanians effectively are  
15 already paying the severance tax, they're just paying  
16 it in their gas bill to other states since most of  
17 the gas we use comes from those states outside of  
18 Pennsylvania that do have a severance tax.

19 MR. WEST:

20 Yes.

21 CHAIRMAN:

22 So we're already paying it, not all,  
23 but most people?

24 MR. WEST:

25 Pennsylvania is currently a net

1 importer of natural gas. And our hope is by 2012 or  
2 2013, if this opportunity is pursued prudently that  
3 we can be become a net exporter.

4 CHAIRMAN:

5 And not only that, but to the extent  
6 that Pennsylvanians, our business, industry and  
7 customers, consumers and households can start using  
8 our own gas, ---

9 MR. WEST:

10 Sure.

11 CHAIRMAN:

12 --- I mean, we will have a considerable  
13 cost advantage there, because it won't be --- it will  
14 only be transported literally dozens or maybe a  
15 hundred or a couple hundred miles, rather than a  
16 thousand miles or so from the gulf states where we're  
17 presently importing most of our gas from?

18 MR. WEST:

19 That's correct. And that's one of the  
20 advantages that we think that we can promote as far  
21 as attracting industry here to Pennsylvania.

22 CHAIRMAN:

23 So just to sum up, you're not --- you'd  
24 support a severance tax, as long as it's reasonable  
25 --- it keeps you in the competitive mix with other

1 states and you do have a list of other issues that  
2 you feel need to be addressed from the industry's  
3 perspective.

4 MR. WEST:

5 Correct. And the revenue goes back to  
6 localities, ---

7 CHAIRMAN:

8 Right.

9 MR. WEST:

10 --- as you've proposed.

11 CHAIRMAN:

12 Yes. Yeah. You know, we heard the  
13 summary in my staff's presentation, I have a good  
14 healthy portion coming back to the locals. I think  
15 that's really important. Okay. Well, thank you.  
16 Appreciate your testimony.

17 MR. WEST:

18 Thank you.

19 CHAIRMAN:

20 And your willingness to travel up here  
21 on a cold evening.

22 MR. WEST:

23 Thank you so much. It's a pleasure to  
24 be here.

25 CHAIRMAN:

1           Thank you. I can't believe it, we're  
2 actually running seven minutes early. That's fine.  
3 We have a lot of driving to do tonight. Next, I'd  
4 like to call Susan McClure. She's with the Marcellus  
5 Shale Committee of Indiana County League of Women  
6 Voters. Susan, welcome.

7           MS. MCCLURE:

8           Thank you. Welcome to Indiana. The  
9 League of Women Voters of Pennsylvania and of Indiana  
10 County thank you for holding a House of  
11 Representative Finance Committee Meeting in Indiana  
12 County and allowing us to speak about a severance tax  
13 on Marcellus Shale natural gas extraction. We will  
14 be addressing provisions in House Bills 1489 and  
15 2443.

16           The League of Women Voters of  
17 Pennsylvania supports the tax on severing of natural  
18 gas in the Marcellus Shale formation. It is a fair  
19 and equitable tax that is related to the industry's  
20 ability to pay. The industry is not floundering,  
21 rather companies are paying bonuses to entice mineral  
22 rights owners to sign. Drilling companies have  
23 demonstrated financial resources in the bids they  
24 entered at auction for the right to drill on lands  
25 owned by the Commonwealth. Currently Pennsylvania is

1 an importer of natural gas and its consumers pay  
2 severance taxes to states where the gas is extracted.  
3 Fourteen (14) states produce more natural gas than  
4 Pennsylvania, and all of them levy a severance tax.

5           The League does not support allocating  
6 the bulk of the money derived from taxing a finite  
7 resource to provide revenue for the General Fund.

8           The League of Women Voters supports the  
9 severance tax on the Marcellus Shale extraction as a  
10 revenue source primarily designated for the  
11 preservation and protection of natural resources, the  
12 monitoring and protection of public health and escrow  
13 fund for supporting community adjustment as the  
14 industry grows and declines, research on the effects  
15 of natural gas extraction from Marcellus Shale on the  
16 economy, environment and public health of  
17 Pennsylvanians.

18           The Pennsylvania Legislature should  
19 regulate very carefully the extraction of natural  
20 gas. We must not repeat the environmental damage  
21 that coal extraction has caused. Natural resources  
22 should be preserved and protected. Potential damage  
23 to the environment exists at all stages of drilling,  
24 production, distribution and site restoration. The  
25 Department of Environmental Protection and the

1 Conservation Districts must be funded to carry out  
2 their responsibilities. Monies need to be set aside  
3 for remediation when the finite mineral resource is  
4 gone and the damage remains.

5 Monies need to be set aside for  
6 potential health costs. Reports from Colorado and  
7 Wyoming indicate that natural gas extraction may  
8 cause health problems. The effects of extraction and  
9 natural gas well maintenance on health have not been  
10 studied. We do not know the long-term effects on  
11 health of drillers and well tenders or on the people  
12 living near the wells, compression stations,  
13 pipelines and storage facilities. There can be  
14 unanticipated problems. Money needs to be set aside  
15 to mediate these problems.

16 There will be economic needs in  
17 affected communities as the extraction industry  
18 expands and declines. Money from an extraction tax  
19 should be set aside to help those community adjust to  
20 their changing fortunes. In the meantime,  
21 communities with affected infrastructure will need  
22 more than their regular allocation of liquid fuels  
23 tax to maintain their roads and bridges.

24 Revenue needs to be used for research.  
25 Legislators need to make good decisions, which are

1 based upon unbiased studies. Studies exist that  
2 calculate the monetary impact drilling has made in  
3 Texas and Louisiana, but any studies about the  
4 noneconomic effects of a burgeoning or declining  
5 drilling industry. Research in public health is  
6 scanty.

7           And here I shift to talking about the  
8 bill. The League of Women Voters supports  
9 transparency and legislation in regulations. How the  
10 severance tax is structured is important. Simplicity  
11 is crucial, ambiguous language may result in a court  
12 striking down the law, deductions will result in less  
13 tax being collected. House Bill 2443, modeled after  
14 Louisiana's severance tax, proposes a set base. A  
15 set base per thousand cubic feet creates a fixed  
16 revenue stream that is easier to predict for both the  
17 tax and the taxing body. House Bill 2443 addresses  
18 increasing revenues as gas prices go up by using a  
19 12-month average based on the price of gas posted on  
20 the Henry Hub. Using Henry Hub figures makes the  
21 piece of --- the price of gas transparent. Drilling  
22 companies pay the tax quarterly, which should reduce  
23 bookkeeping costs for both the industry and the  
24 Commonwealth.

25           House Bill 1489 is modeled after West

1 Virginia's severance tax. It appears it would  
2 generate more revenue as the price per thousand cubic  
3 feet increases. However, the Commonwealth's cost of  
4 administration would be higher. The sale of gas at  
5 the wellhead would need to be monitored to ensure  
6 that drilling is selling at an arm's length, that is  
7 not selling at a low price to a subsidiary, which  
8 would then resell the gas for a higher price, thus  
9 depriving the Commonwealth of revenue. The tax is  
10 paid monthly to the Commonwealth, creating more  
11 paperwork than a quarterly payment.

12 It will be --- in conclusion, it will  
13 be very difficult for legislators to exist using  
14 Marcellus Shale natural gas severance tax revenue to  
15 balance a Pennsylvania state budget in a time of  
16 falling income with increasing expenses. But mineral  
17 extraction comes at a cost. These costs must be part  
18 of the revenue allocations.

19 CHAIRMAN:

20 Thank you. Thank you. Any questions  
21 from the members. Representative Reed?

22 REPRESENTATIVE REED:

23 Thank you, Susan, for joining us twice  
24 in a month.

25 MS. MCCLURE:

1 Different approach.

2 REPRESENTATIVE REED:

3 Different approach, same place, but  
4 same basic concept. When you talk about where the  
5 League believes the revenue should go to, does one of  
6 these categories include local governments, counties,  
7 township and boroughs? Because I guess maybe it's  
8 under the Escrow Fund for supporting community  
9 adjustment as the industry grows and declines, but  
10 I'm not sure. The other categories don't seem to  
11 dedicate the money to the local communities.

12 MS. MCCLURE:

13 Well, the League works with consensus,  
14 and we studied the issue for a year, and then the  
15 League drew up consensus questions which, you know,  
16 were available for all the leagues to respond to.  
17 And then from that, we drew our position. And here I  
18 am going to get in trouble probably. The people  
19 across the state were not as enthusiastic about what  
20 you're talking about as, say, the Indiana County  
21 league is.

22 REPRESENTATIVE REED:

23 Probably because they're not drilling  
24 in their areas.

25 MS. MCCLURE:

1                   Precisely. Because some of our  
2 members went through and looked to see where the low  
3 numbers came from, and they were, indeed, in areas  
4 that did not have the drilling. Now, if you had  
5 pipelines, like in Montgomery County, they were very  
6 interested in it. And that's unfortunate that that  
7 was the way it turned out.

8                   REPRESENTATIVE REED:

9                   Then I would imagine my second and  
10 final question, the results would be ---?

11                  MS. MCCLURE:

12                  Excuse me, when I asked a State Board  
13 Member about that --- I'm sorry, Dave.

14                  REPRESENTATIVE REED:

15                  Go ahead.

16                  MS. MCCLURE:

17                  She said --- because I said something  
18 about being disappointed, blah, blah. And she said  
19 that she thought that was in supporting the community  
20 adjustment.

21                  REPRESENTATIVE REED:

22                  Okay. I'm guessing the answer to my  
23 second question would be similar where when I talked  
24 about earlier the money dedicated to the  
25 Environmental Stewardship Fund or the Conservation

1 Districts making sure that that money actually goes  
2 towards, you know, environmental or mediation in  
3 counties impacted by drilling. I would imagine that  
4 that answer would differ, you know, from, say, the  
5 Indiana County League members, as opposed to the  
6 statewide coalition, that you would have a similar  
7 breakdown that those not impacted by drilling want to  
8 see that money just go into a general pot of money  
9 that they have a chance at, whereas the communities  
10 that are impacted by drilling would certainly like to  
11 see it used to remediate the actual drilling costs?

12 MS. MCCLURE:

13 That narrow perspective was not  
14 addressed in our consensus questions. So no matter  
15 --- you know, Indiana League, of course, we'd like to  
16 see it come here. We would like to get rid of all of  
17 the acid mine drainage. We would like to see our  
18 roads and bridges in repair. We would like to see  
19 every stream running clean and pure, but ---.

20 REPRESENTATIVE REED:

21 And I think that's a key topic of  
22 discussion as we go forward. I know the League  
23 operates with consensus and you're restricted by that  
24 consensus. But from a public policy standpoint, I  
25 really do think we need to look at the approach of,

1 you know, we've got an awful lot of folks around the  
2 state that like to use our energy and would like to  
3 use the revenue generated from the production of this  
4 energy for their own needs and oftentimes forget  
5 about what it takes in the local communities to  
6 produce that energy. And I wish more folks would ---  
7 not locally but across the state would realize that  
8 there is, you know, some impact out there locally and  
9 perhaps those folks should have, you know, first  
10 right to those revenues. I appreciate the  
11 perspective. And like I said, I understand the  
12 consensus part of the League process, so the answers  
13 may differ depending on the local league as opposed  
14 to the state league.

15 A. Precisely.

16 REPRESENTATIVE REED:

17 Thank you.

18 REPRESENTATIVE BRIGGS:

19 I have a question.

20 CHAIRMAN:

21 Representative Briggs?

22 REPRESENTATIVE BRIGGS:

23 I just wanted to point out that though  
24 in my district, in Montgomery County, we don't have  
25 drilling which affects our community, but as you

1 mentioned through the questionnaire, the consensus,  
2 that people in my area are concerned about the  
3 pipelines. And I think we need to continue to be  
4 balanced so to protect and, you know, look out for  
5 --- where the drilling's happening, there is a lot of  
6 other industry effects throughout the Commonwealth  
7 that we should keep into account. It's not really a  
8 question. I just wanted to ---.

9 MS. MCCLURE:

10 Dave's topic was water when we were  
11 asked to testify before. And water flows throughout  
12 the state. The water from the drilling area is going  
13 to flow where there are no wells. And that, I think,  
14 is important to say that those areas could get the  
15 dirty water, but --- and the energy, but not have to  
16 share --- but --- how am I saying this? They would  
17 get the water, which needs to be cleaned up, and they  
18 want the clean water. So therefore, if they need  
19 clean water in their areas, I think they should get  
20 it, because it's related to the drilling. It's not  
21 quite that cut and dry as to whose roads are we going  
22 over, and the same goes for the air.

23 REPRESENTATIVE REED:

24 I think when you look at the key  
25 components when you dedicate money to the

1 Conservation District, we dedicate it to actually,  
2 you know, using it to regulate the industry or using  
3 it for the environmental protection related to the  
4 industry. You take care of a lot of those problems  
5 that may, you know, wander into nonproducing areas by  
6 getting into, you know, the root source of the  
7 problem.

8 MS. MCCLURE:

9 I do, too. Thanks.

10 CHAIRMAN:

11 Susan, let me just draw you into a  
12 conversation just on this idea of, you know, all the  
13 money that's --- all the revenue that's generated in  
14 a county ought to stay there. We have --- and you're  
15 obviously aware, we have a Growing Greener Program in  
16 the state. It is funded by a tipping fee, by a per  
17 ton fee on garbage that goes into our landfills.  
18 Now, that money that's derived from that fee isn't  
19 just used to fund Growing Greener only in those  
20 municipalities and counties. It's used to fund a  
21 statewide environmental cleanup and remediation  
22 program, okay.

23 So, you know, so we have a good  
24 statewide program, but if we limit the revenue to the  
25 use in the communities where it's derived from, then

1 there's vast areas of the state that don't have  
2 landfills that would never receive any funding  
3 through Growing Greener. And logically as well, we  
4 have a wage tax collection system in this state. And  
5 if you paid your wage tax where you worked at, well  
6 then those employment centers in the state would  
7 generate a lot of wage tax revenue. The reality is  
8 we pay our wage tax where we live and not where we  
9 work. And there are impacts that, you know,  
10 communities that --- you know, where there are  
11 employment centers, there are public services that  
12 that local government has to provide for which they  
13 don't get any compensation.

14           So you know, if we're looking at a tax  
15 policy so that we drive the money only to the areas  
16 where it's generated, then we're not going to be much  
17 of a Commonwealth. We're just going to be a  
18 collection of individual municipalities and counties,  
19 you know, and we're not going to be able to have any  
20 statewide policy or system in place.

21           So that's why I think from my  
22 perspective, at least, we need to provide some  
23 revenue to fund Growing Greener, which has over the  
24 last years since --- and this is a good republican  
25 and democratic program that was created and has been

1 sustained through bipartisan support. But the  
2 problem is with the loss of revenue from the fact  
3 that the tipping fee is generating less and less  
4 money and for other reasons why we have rated the  
5 Growing Greener funding stream, the revenue isn't  
6 there to fund those programs. So that's why we're  
7 trying to look at, you know, from my perspective, a  
8 way to fund Growing Greener, which is a program that,  
9 you know, is used to clean up acid mine drainage, you  
10 know, and promote land preservation in areas. It's a  
11 program that worked really well, but I think it needs  
12 to be placed on sustainable long-term financing.  
13 Your thoughts about it?

14 MS. MCCLURE:

15 Well, I wasn't --- I just --- excuse  
16 me. I thought you were telling us your views and I  
17 didn't think I was going to give mine. I am a firm  
18 believe that water doesn't stay --- that we all share  
19 the water, that we all share the lands. And if it  
20 turns out that you over here get rid of your garbage  
21 over here, well, you know, somehow it all comes back  
22 to us because the nature doesn't keep it in one spot  
23 if that makes sense of you.

24 CHAIRMAN:

25 We're part of the Commonwealth.

1                   MS. MCCLURE:

2                   Yes.

3                   CHAIRMAN:

4                   You know, we all have a stake in the  
5 environmental no matter where we live.

6                   MS. MCCLURE:

7                   I was also thinking that if you want to  
8 get the bill passed, you need to support everybody.

9                   CHAIRMAN:

10                  Thank you.

11                  REPRESENTATIVE REED:

12                  If I could just comment, I think that's  
13 probably good the way you balanced it, you gave  
14 45 percent to the General Fund which the state can  
15 use for all of its citizens. And I think dedicating  
16 the other portion of the revenue to the communities  
17 impacted isn't somewhat unreasonable when the state's  
18 already going to get 45 percent that can go to  
19 Growing Greener, can go to, you know, DEP regulators,  
20 can go to the LIHEAP Program. You dedicate some of  
21 that money to Fish & Boat Commission, the Game  
22 Commission. So there's certainly more than enough  
23 revenue, and I think you've done a good job of  
24 balancing the percentage of the revenue going to the  
25 Commonwealth as a whole. Now we just go to make sure

1 we take care of the communities that are impacted  
2 locally, too.

3 CHAIRMAN:

4 Thank you.

5 MS. MCCLURE:

6 Thank you.

7 CHAIRMAN:

8 Next I'd like to have --- invite Mr.  
9 James Resh. Mr. Resh is the manager of the Indiana  
10 County Conservation District.

11 MR. RESH:

12 Well first of all, my name is Jim Resh.  
13 I'm the manager of the Indiana County Conservation  
14 District. And I do like this House bill, because  
15 it's the only one that specifically identifies  
16 Conservation Districts as having some funding for us.  
17 Another thing I like about this bill is the fact that  
18 we see 55 percent of the funds associated --- or the  
19 revenue generated from this going back to local  
20 governments, our communities, emergency services and  
21 as far as protecting our resources. I like that.  
22 It's very well defined. I think those are very good  
23 points that I'm seeing here.

24 I think maybe --- let's get a little  
25 bit into --- again, I'm here as a Conservation

1 District, and why we're here pushing this and the  
2 importance of it. First of all, maybe I need to  
3 define what our mission is here. In Indiana County  
4 our mission is to basically promote sustainable  
5 agriculture in communities and wisely use the  
6 resources of Indiana County, which is natural gas.  
7 And basically also to promote our communities, be it  
8 our agriculture or rural communities, our townships.  
9 We have a lot of rural townships. They've been  
10 impacted by all the gas well drilling we have had  
11 over the years. And you know, I think this bill is  
12 going to offer some help to them, and so that's why  
13 I'm here looking at that.

14           Why we need to see the three percent  
15 funding for Conservation Districts? Just to give you  
16 an idea of where our funding stream comes from, if  
17 you're not familiar with it. Right now, we're a line  
18 item in the Department of Environmental Protection's  
19 budget and the Department of Agriculture. That has  
20 been flat for the past eight years and has dropped in  
21 a lot of cases.

22           Another thing which I'm kind of proud,  
23 which we try to do in our district, is we do have fee  
24 for services. So I'm not really looking at handouts.  
25 I'm looking at the ways the Conservation District,

1 itself, could generate funds. And one of those are  
2 we do have --- we review the roads control plans. We  
3 do some permits and we charge fees to industry for  
4 that. A little while back, we used to with be able  
5 to charge --- we used to do a service for the oil and  
6 gas industry. Unfortunately, the Department decided  
7 to take that back into the House. We lost quite a  
8 bit of revenue and, quite frankly, I think the  
9 industry was a little disappointed by that decision,  
10 because they liked to deal with somebody locally.  
11 Now they're having to deal with a regional office,  
12 things take longer. So it really is no benefit to  
13 them. And actually, in our case, we have lost quite  
14 a revenue stream from that, that helped us, you know,  
15 stand on our own two feet as opposed to having to  
16 rely on funds from that.

17 Another thing which this bill does  
18 address is the Environmental Stewardship Fund, which  
19 I think is a very good program. Indiana County has  
20 taken advantage of it as far as dealing with mine  
21 draining issues. One project we have is up in the  
22 Bear Run Watershed, northeast corner up by Jefferson  
23 County. It's a fairly large watershed when we get  
24 that back in shape. It's an undeveloped watershed,  
25 but it's affected by mine drainage. We're working on

1 that. We get that back into shape, we could bring  
2 tourism into that area. We can create other  
3 industries. Same thing just along Two Lick Creek.  
4 We're working on a project to create a waterworks  
5 conservation area. I can see when it's done, we're  
6 going to see canoeing and kayaking along Two Lick  
7 Creek, again creating another industry and revenue,  
8 you know, for the county. We're creating jobs for  
9 the county.

10           The third, as far as what we're doing  
11 in agriculture. Actually, we see, again, through the  
12 Environmental Stewardship Fund, some money to  
13 leverage a watershed implementation plan in the south  
14 branch of Plum Creek. This is a high quality  
15 watershed that's impacted with sediment, basically  
16 due from agriculture and in a lot of cases from our  
17 rural roads. And then what's nice about this, the  
18 work we're doing is going to enable us to leverage  
19 EPA money to, again, bring that back into the county  
20 and do additional work.

21           And so that gives you an idea of some  
22 places we have used it. And that's how we get --- so  
23 we get some revenue from that, so if that  
24 Environmental Stewardship Program isn't in place,  
25 we're potentially loosing some potential funding

1 there or potential sources of revenue for the  
2 district.

3           And then finally, we get support from  
4 the county that helps us along on our way. But you  
5 know, our county is strapped, too. When counties go  
6 down and in turn the budget remains flat. And having  
7 this three percent go to the --- and I think it would  
8 go to the State Conservation Commission. And it  
9 would be up to them, from what I read in the House  
10 bill, it'd be up to them to more or less determine  
11 how it's allocated to the districts. I think that's  
12 how that would work. From what I saw in the  
13 language, there is something to that effect.

14           So that's where --- you know, why do  
15 the conservation --- you know, is it important to the  
16 Conservation Districts to be --- you know, why do you  
17 want to give us three percent? You know, what do we  
18 do for your constituents, things like that? I think  
19 I identified some of the stuff we're doing on water  
20 quality issues. But also I think we find that a lot  
21 of times, we're a lot of the go-to people for  
22 environmental questions in the county. People have  
23 some questions, they're calling the Conservation  
24 District. They're calling us, where do I go from  
25 here. They're looking for help. So we're a good

1 place to get that. That's not a revenue generator,  
2 but that's something that the people need answers to,  
3 and the Conservation District is the place to get  
4 them.

5 Another one is, I think, the Department  
6 of Environmental Protection says we're very cost  
7 effective in administering programs. We do their 102  
8 Program, and for a while back, the 105, introduced  
9 your management program. Those were left up to the  
10 state to administer. Their costs would be  
11 considerably higher, you know. And right now,  
12 they're probably funding us maybe 40 percent or 30  
13 percent of what the costs are to run those programs.  
14 So you see that three percent would definitely have  
15 some benefit for the Conservation Districts.

16 And I think we are really affected  
17 players with this Environmental stewardship Fund to  
18 use that money. I think Conservation District are  
19 very creative. We know where our environmental  
20 problems are. We know how to work with them. We  
21 have Mike Bertolino out there. We work with the  
22 townships on dirt and --- on road issues and deal  
23 with that. So they know we're out there helping them  
24 and we have some answers for them there. So that's  
25 some benefit.

1                   So you can see, that's a lot of the  
2 things I like about this bill is that it really puts  
3 55 percent of that money to the people that are  
4 impacted by this Marcellus drilling. I do like one  
5 thing in there, the fact that you do --- and this is  
6 the reason for the natural gas stuff in there. You  
7 know, Indiana County, I think, at one time had the  
8 reputation of being the most drilled county in  
9 Pennsylvania. If you go outside, we have a gas well  
10 --- every 1,000 feet there's a gas well in Indiana  
11 County, and those are shallow wells. And I think  
12 they would qualify as a stripper well under this.  
13 Most of them produce less than 60 units of gas a day.  
14 In fact, I think that chart there will define it. I  
15 think 98 percent of them are less than that, and  
16 30 percent, I think it was, produced less than five  
17 units of gas a day.

18                   One provision, and I think  
19 Representative Reed brought it out, is that clause  
20 regarding producing wells and paying wells. Right  
21 now the way that that legislation is written, I think  
22 it's going to be a real burden to someone in  
23 industry, because it goes into metering issues which  
24 in talking, again, from that representative, you're  
25 looking at a cost of probably \$33,000 for a meter on

1 every one of these wells. Right now what they'll do  
2 is, say we have a farm out there, there's four or  
3 five wells on that farm, there's one meter when it  
4 leaves that farm measuring the gas off those four  
5 wells that determines basically the royalty that goes  
6 to the landowner.

7           And then also that meter is used,  
8 because now we have industry down the line, they're  
9 selling that gas to somebody else, so they're  
10 watching each other out here. So I really question a  
11 lot of this stuff as far as what's the Department's  
12 role and how much they have to be doing as far as  
13 metering and watching. Or is it even necessary to  
14 even require meters on wells that we're never going  
15 to collect any of this tax from? It's creating  
16 really a lot of burden for in industry. And I'm  
17 going to step one step back to our mission statement  
18 promotes sustainable agriculture and communities. We  
19 have a lot of rural communities. There's a lot of  
20 gas wells. We have a lot of gas well tenders that  
21 are working on these wells that are producing small  
22 amounts of gas. If we get to the point that they're  
23 forced to meter and do things like this, you're going  
24 to see --- they're going to start deciding, well,  
25 this well's not productive. It's time to shut it in.

1 And they shut that well in. We lose the well tender  
2 production, all the other industries associated with  
3 it. And if that's a farmer, he all of a sudden loses  
4 his royalties he gets, be it they're small. He also  
5 loses the free gas he used to get to his house.  
6 Those wells start getting plugged and that'll be the  
7 end of that. And there's a lot of people in our  
8 rural communities, you know, they depend on that.  
9 And that's a point that needs to be considered.

10 And if we want to look at the resource  
11 side of this, granted these wells are only producing  
12 five, six cubic of gas --- units of gas a day.  
13 They've been doing that for 70 years. You know, we  
14 don't know what's going to happen with Marcellus  
15 Shale. You could be drilling a well. It can make a  
16 million cubic feet of gas for one year and the next  
17 year, there could be nothing in it. But we have  
18 wells that have been producing for 70 years  
19 consistently producing, granted it's only five units  
20 a day, but it's a consistent supply. So I really  
21 think for --- in this bill, we need to really look at  
22 that issue and definitely support the fact that ---  
23 I'd like to see the support for the Conservation  
24 Districts. Do you have any questions?

25 CHAIRMAN:

1 Well, that's the next thing. Any  
2 questions from members? Representative Reed?

3 REPRESENTATIVE REED:

4 Jim, thanks for taking the time.

5 MR. RESH:

6 Sure.

7 REPRESENTATIVE REED:

8 As you know, you kind of started the  
9 discussion on funding Conservation Districts last  
10 year, ---

11 MR. RESH:

12 Yeah.

13 REPRESENTATIVE REED:

14 --- when we looked at some of the  
15 leasing proposals on the state forestland and  
16 actually started the distribution model discussion,  
17 because the Governor had originally proposed just  
18 taking all of the money from several expenditures  
19 leasing whatever the revenue source was, and just  
20 balancing the General Fund by taking money away from  
21 the Oil and Gas Lease Fund and transferring it over.  
22 How much do the Conservation Districts get from the  
23 state right now? Because I know it's gone down  
24 dramatically during this administration.

25 MR. RESH:

1 Well, it's --- I think it was --- well,  
2 it was two years ago \$3.7 million. It's down to  
3 \$2.92 or \$2.9 million, so that's dropped. Our  
4 funding from Department of Agriculture was \$1.5  
5 million. They're proposing to drop that down to \$1  
6 million. So those are some big hits we've been  
7 experiencing.

8 REPRESENTATIVE REED:

9 So basically, I mean, if this proposal  
10 brings in \$100 million dollars, which I think on the  
11 low end of what some of the revenue folks are looking  
12 at, you're looking at three percent, \$3 million,  
13 you're almost doubling the state's support of  
14 Conservation Districts?

15 MR. RESH:

16 Oh, yeah.

17 REPRESENTATIVE REED:

18 Which is significant.

19 MR. RESH:

20 Which is --- well, which is helpful.  
21 Right now what funding we get doesn't even come close  
22 to covering 50 percent of the cost of having, you  
23 know, a manager, a technician and a staff there. It  
24 doesn't even come close. Doesn't even come halfway.

25 REPRESENTATIVE REED:

1           If you just want to highlight one of  
2 the programs you did mention that really impacts  
3 local communities with drilling for certain gravel  
4 road program?

5           MR. RESH:

6           Yes.

7           REPRESENTATIVE REED:

8           I know you guys have implemented that  
9 very successfully here in the county, and that --- I  
10 mean, a lot of it's truck traffic in rural  
11 communities going over dirt and gravel roads.

12          MR. RESH:

13          Right.

14          REPRESENTATIVE REED:

15          And the job that you guys have done  
16 with that has been tremendous. And also, I think the  
17 local permitting issue that you discussed with  
18 Secretary Hanger had taken away about a year, year  
19 and half ago. I know you and I have had discussions  
20 about that, that I brought up with the Secretary.  
21 I'm hoping that the new DEP secretary with the new  
22 administration next year will revisit that. And I  
23 hope the Conservation Districts will be part of that  
24 discussion, because I think nobody's better to know  
25 the local impact of the permits than at least getting

1 some input from the Conservation Districts that know  
2 those communities best. Thanks, Jim.

3 A. Exactly. That's kind of ironic, because here we  
4 are, a lot of our issues are streams and all this  
5 permitting with the oil and gas is all related to  
6 that, and that was gone. And the irony was, too,  
7 that a lot of the industry representatives would  
8 rather go locally, and now they're not. So ---.

9 CHAIRMAN:

10 Thank you. Mr. Resh, just a couple of  
11 questions. You mentioned about the DEP has changed  
12 the permitting process relative to, you know,  
13 drilling sites. My understanding is that primarily  
14 affects the erosion and sedimentation permitting  
15 process; is that correct?

16 MR. RESH:

17 And the other one has to do with which  
18 is called the 105 or the stream impacts ---

19 CHAIRMAN:

20 The stream impacts.

21 MR. RESH:

22 --- that have to put culverts into  
23 cross streams or pipelines have to go under streams,  
24 things like that. That used to be locally  
25 administered program. Very quickly done. You do it

1 locally. We do the stream. We knew everything was  
2 taking place. Now that's handled in a regional  
3 office. No one is even out there to see what's going  
4 on out there now.

5 CHAIRMAN:

6 Do you feel as though that there's not  
7 appropriate staffing in DEP to look at the 105  
8 permitting process as well as the ENS?

9 MR. RESH:

10 I would --- I hate to --- well, let's  
11 put it that way. There's no fuel presence. You know  
12 it's basically a review. They don't even know if  
13 there's a permit issued. If it's on the paper is how  
14 they issue the permit, you know. In our county, we  
15 knew what was going on. We knew the stream budget.  
16 We knew where the crossing was, what issues may be  
17 involved. My staff in this case went out and looked  
18 at those. You know, granted it got to the point, you  
19 know, you're working in a small county, oh, yeah, I  
20 know where that's at.

21 It gets to be that point, you know  
22 where there may be potential problems. But right,  
23 there's no field permits. Those permits come into  
24 the office, they've identified a location on a map,  
25 basically they look that they're administerially

1 completely and the permit's issued. And that's the  
2 procedure.

3 CHAIRMAN:

4 Correct me if I'm wrong, say if there's  
5 a commercial or an industrial development somewhere  
6 in the county, the Conservation District still does  
7 the ENS and the stream encroachment permitting. They  
8 still do it there?

9 MR. RESH:

10 Yes. The oil and gas industry  
11 basically that --- all the activity to do with that  
12 got pulled away.

13 CHAIRMAN:

14 Okay. But you still do ---?

15 MR. RESH:

16 Still do other industry, yes. If a  
17 Wal-Mart's moving in or anything like that, we still  
18 do that, yes.

19 CHAIRMAN:

20 So any other industrial or business or  
21 commercial development with, you know, --- or logging  
22 or what have you, you still do all of the ENS work  
23 for everything else?

24 MR. RESH:

25 Associated with that, yes.

1                   CHAIRMAN:

2                   The Department has just carved out ---

3                   MR. RESH:

4                   The oil and gas industry.

5                   CHAIRMAN:

6                   --- the oil and gas? Okay. And just  
7 let me ask you this from a practitioner's  
8 perspective. I mean, in terms of the issue of  
9 metering, if a landowner, a farmer or whoever, you  
10 know, traditionally has stripper wells on their  
11 property and they have an agreement, you know, with  
12 the gas company relative to royalties, how do they  
13 know? I mean, doesn't the fact that you have an  
14 existing system in place for royalty, doesn't that  
15 require that metering be put in place so that the  
16 landowner knows how much gas is being, you know,  
17 pumped so that they get the right data on which to  
18 calculate their royalty income?

19                   MR. RESH:

20                   Okay. Could I --- not to --- I have  
21 representatives of the industry that could maybe  
22 answer the question better than I have, in the  
23 audience, or would you rather me answer --- from what  
24 I understand, ---

25                   CHAIRMAN:

1 Yes, just your perspective.

2 MR. RESH:

3 ---- if we have a farm and there's five  
4 wells on it, those are all collected. Before that  
5 leaves that farm, it goes through a meter. So those  
6 five wells are totaled through that one meter as it  
7 leaves the farm.

8 CHAIRMAN:

9 Okay.

10 MR. RESH:

11 So yes, you still know how much gas is  
12 leaving, but specifically for each well you don't  
13 because you're playing on the royalty for the whole  
14 lease.

15 CHAIRMAN:

16 You got to make sure that all the wells  
17 --- you know, if you have seven or eight wells, you  
18 got to make sure that all of them actually run  
19 through the meter ---

20 MR. RESH:

21 Yes. Yeah.

22 CHAIRMAN:

23 --- to be accurate?

24 MR. RESH:

25 Yeah, they would have to all go through

1 the meter.

2 CHAIRMAN:

3 Okay.

4 MR. RESH:

5 But right now, if we demand a meter on  
6 every one of those, that's what gets to be --- now  
7 it's the cost of having the meter and the cost of the  
8 certification of the meter and all of the other. And  
9 from what I understand, I think DEP right now, those  
10 wells or those group of wells maybe are every year.  
11 There is a yearly report that's submitted on them  
12 already, so they already know the production. You  
13 know, we're just dividing --- you know, just adding  
14 another step to the whole process.

15 REPRESENTATIVE REED:

16 Just so I understand, the problem is  
17 when you carve up stripper wells and you set that  
18 level that you have to hit for it to be subject to  
19 the severance tax, in order to know if each of those  
20 wells are hitting that level, you have to put the  
21 meter on each well, as opposed to four wells flowing  
22 into one meter? Is that really kind of the basics as  
23 to why you're going to have to have the additional  
24 meters?

25 MR. RESH:

1 I think.

2 REPRESENTATIVE REED:

3 You got to hit the 60,000?

4 MR. RESH:

5 I think it requires every well to have  
6 the meter. Now, if you had ---.

7 REPRESENTATIVE REED:

8 Which you have to do because you've got  
9 to know whether they hit 60,000 or not ---.

10 MR. RESH:

11 I would say that if you have five wells  
12 on a property and one meter leaving reading, and it's  
13 only reading 50 a day, none of them are --- they're  
14 all considered stripper wells.

15 CHAIRMAN:

16 Right.

17 MR. RESH:

18 Yeah.

19 CHAIRMAN:

20 But what if there's five wells and the  
21 readings come in at, you know, 120 instead of 60,  
22 well you don't know if there's one that's over the 60  
23 and the other four aren't? Okay. You're uncertain  
24 as to that?

25 MR. RESH:

1                   Yeah, well, I guess that's --- that  
2 would require a little looking into, yeah.

3                   CHAIRMAN:

4                   Well, that's okay, that's why we have  
5 hearings like this.

6                   MR. RESH:

7                   Yeah, I guess that would require  
8 looking into that, yeah.

9                   CHAIRMAN:

10                  Thank you. Thank you very much.

11                  MR. RESH:

12                  Yes.

13                  CHAIRMAN:

14                  Next Mr. Rodney Ruddock, the Chairman  
15 here of the Allegheny --- I'm sorry, Allegheny.  
16 Indiana County Board of Commissioners. I'm sorry.  
17 Didn't mean to move you 100 miles west so quick.

18                  MR. RUDDOCK:

19                  Let me shake your hands first. I'm  
20 sorry. I wasn't here at the beginning of your  
21 presentation tonight. I was at a dinner with the  
22 American Red Cross and was able to have dinner with  
23 Dave Reed's wife, so everything ---.

24                  REPRESENTATIVE REED:

25                  At least somebody was.

1                   MR. RUDDOCK:

2                   I have some prepared thoughts here.  
3 I'm pleased to be able to be here tonight. I would  
4 with admit that I did get some encouragement from the  
5 County Commissioner's Association to make presence  
6 here tonight as well, so ---.

7                   CHAIRMAN:

8                   Excuse me, do you have copies of your  
9 ---?

10                  MR. RUDDOCK:

11                  I have ---.

12                  CHAIRMAN:

13                  Did you bring any extras?

14                  MR. RUDDOCK:

15                  I did make some additional copies. I  
16 have, I think, three additional.

17                  CHAIRMAN:

18                  Well, we'll share up here.

19                  MR. RUDDOCK:

20                  I actually called back to see if I  
21 needed to have any additional copies. They said, no,  
22 but I made some anyways, so ---. Representative,  
23 team of our local and state legislative group, on  
24 behalf of my county colleagues, I want to thank you  
25 for the opportunity to provide testimony regarding

1 our position on the enactment of severance tax on  
2 natural gas.

3           First of all, as you are keenly aware,  
4 we favor support of House Bill 10, which doesn't deal  
5 with severance of natural gas, but it would restore  
6 each county's ability to assess oil and gas just as  
7 other minerals, such as coal and limestone are  
8 currently assessed. Since the Supreme Court decision  
9 of 2002, oil and gas industry has not been  
10 shouldering its fair share of the property tax burden  
11 for counties, municipalities and school districts in  
12 oil and gas producing counties. Restoring this  
13 ability is a simple and direct way to drive revenue  
14 to local governments as a matter of tax equity.

15           As part of the growth potential of the  
16 Marcellus Shale, we, I think, as county commissioners  
17 are attempting to become better informed decision  
18 makers. We do advocate that local governments must  
19 receive part of the benefits of this growing industry  
20 in order to offset local costs.

21           While we lean in favor of a severance  
22 tax, we are also cautious that we do want to make  
23 sure that such a decision does not in any way impede  
24 our competitive status with other regions which are  
25 seeking also to improve their economic status. To

1 look at severance tax imposed by other states, one  
2 must also examine other business and corporate taxes  
3 which may or may not be levied that help to create an  
4 unlevel playing field. I think Jim Resh even spoke  
5 to some of those cautions as well from a conservation  
6 point of view.

7           Specific to the discussion of the  
8 severance tax, as I said before, we lean in favor  
9 only because we --- all counties are hurting. All  
10 counties are hurting right now financially. And I'm  
11 just going to say this sort of as an ad lib, we just  
12 got done building, not necessarily by state mandate  
13 but by requirements, a new prison system. That  
14 prison system cost us \$28 million. That was burdened  
15 by --- onto the taxpayers' shoulders of Indiana  
16 County. We don't receive any kind of state subsidies  
17 whatsoever for that.

18           We are also required by 2013, to have  
19 installed a public radio safety system that meets the  
20 requirement of the FCC by 2013. That's an additional  
21 tax burden that could cost anywhere from \$16 to  
22 \$23 million. Again, a burden that has to be placed  
23 solely on the taxpayers of Indiana County.

24           We have reached a point where we have  
25 to find ways to draw some additional revenues, simply

1 to meet and make ends meet.

2           Specific to the discussion on the  
3 severance tax, whatever severance proposal and other  
4 new revenue sources are enacted, they must contain a  
5 --- they must contain a shared revenue dedicated to  
6 county and municipal governments to deal with the  
7 impacts from development of this energy resource. We  
8 firmly believe that there can be no severance tax  
9 unless there is a local share.

10           And that's the point I'm making here.  
11 I'm not saying we necessarily have to have a  
12 severance tax if we can find other ways to draw  
13 monies to the county. But if we do have a severance  
14 tax, then local share must be there. It does not  
15 seem fair that a severance tax would be solely used  
16 to reduce the state's current budget deficit. I have  
17 heard, I have it in my notes here we have heard, but  
18 I have heard, and I've spoken to some people from the  
19 state, that they see this as a great means to reduce  
20 the state's pension deficit. Yet what we must all  
21 realize that this pension burden is also carried by  
22 each county of the state as a mandated defined  
23 benefit program. We have the same responsibilities  
24 of pension that the state has.

25           I think that soon you will hear from

1 Mike Bertolino, who represents the Township  
2 Supervisors of Indiana County. CCAP and PSATS  
3 Township Association, as I understand it, support  
4 collectively if there is a severance tax, dedicating  
5 25 percent of this tax to a local government fund  
6 which could be distributed to host municipalities,  
7 host counties, nonhost municipalities and  
8 Conservation Districts. The proposed distribution  
9 roughly includes, and I'm using these numbers because  
10 it's approximate, although they do add to 25 percent,  
11 14 percent to municipalities, 5 percent of that  
12 14 percent dedicated to roads and bridges. How am I  
13 doing, Mike?

14 MR. BERTOLINO:

15 You're doing well.

16 MR. RUDDOCK:

17 Eight percent to counties and three  
18 percent to Conservation Districts.

19 I've had the opportunity to review each  
20 of the severance tax proposals that have been  
21 introduced in the House. Each proposal creates a  
22 different possibility by which the money should be  
23 allocated, based upon a range of distribution  
24 options. We are extremely hopeful that whatever  
25 decision is made is mindful of the unique differences

1 which exist between traditional, marginal or stripper  
2 wells in Pennsylvania, and those which will be  
3 generated through Marcellus production. I think  
4 that's a critical piece to the whole issue as well.

5           Please avoid the use of boards that  
6 help to decide at the local level how pockets of  
7 money should be distributed or how to govern the  
8 spending of potential severance tax dollars. We at  
9 the county level have fiduciary responsibilities to  
10 control budget decisions for the county, not for  
11 municipalities. I know this position falls in line  
12 with your House Bill 2443, Representative, which does  
13 not contain any oversight board to dictate how  
14 government funds should be spent, nor does it contain  
15 any language on the use of the funds.

16           I will suggest, however, that we did  
17 have great success in Indiana County in the  
18 distribution of dollars, which were made available  
19 for Environmental Stewardship as part of the Growing  
20 Greener II initiative. Jim Resh did an outstanding  
21 job on our behalf in distributing over \$1 million  
22 that made its way to the rural parts of this  
23 community and did some outstanding work in completing  
24 some of the requirements to upgrade the conditions of  
25 quality of life. And acid mine drainage being one of

1 the primary goals.

2           Should severance tax fund make their  
3 way to the local level, we would hope that there  
4 would be no restrictive use of those funds.

5 Obviously, our municipalities face very serious road  
6 and bridge problems. At the county level, we are  
7 trying to come to grips with our bridge needs. We  
8 don't own any roads. Severance dollars could very  
9 well be served if we have the freedom to provide  
10 long-range planning and response to these  
11 transportation shortfalls.

12           Should you look for a means to properly  
13 transfer dollars to municipal level, a formula drive  
14 to distribution model which has been used for the  
15 liquid fuels tax program, a vehicle that is already  
16 in place, would be the best means to achieve  
17 municipality fairness.

18           We have not yet fully judged the impact  
19 that the Marcellus Shale will bring to our county.  
20 We've had great experience and support through  
21 shallow wells throughout Indiana County, and we know  
22 firsthand of the economic values and the issues which  
23 tend to follow such economic development. We do  
24 realize that as we move forward and grow the gas and  
25 oil industry, there will be additional costs

1 associated to county government. These extend to  
2 emergency management and response, human services and  
3 all court administered programs and services, even  
4 the maintenance of deeds and records are affected by  
5 such growth potential. We are yet to fully  
6 understand our role to attending to the potential  
7 water and wastewater issues that have begun to  
8 surface, and we certainly are not prepared  
9 financially to deal with those issues.

10 In final comment, we welcome the  
11 opportunity to be partners with our legislative team  
12 and to do what is right to find a fair and supportive  
13 role in bringing oil and gas revenues to our local  
14 communities. Please do not forget the little man in  
15 the big picture. Thank you for providing these  
16 hearings. Thank you.

17 CHAIRMAN:

18 Thank you, Mr. Ruddock. Any questions?  
19 Representative Reed?

20 REPRESENTATIVE REED:

21 Just real quick, Commissioner. I think  
22 you're right, your point is well made when you talk  
23 about the severance tax. It seems like that's been  
24 the solution to every problem out there, whether it's  
25 transportation funding, property tax reduction,

1 pension funding, General Fund budget problems.  
2 Everybody seems to think if you just put a severance  
3 tax on the industry, that it's going to solve the  
4 problem. But your point is well made that those  
5 monies need to be dedicated to mitigating the actual  
6 impact of the drilling in the communities. One just  
7 point that I want a little bit of clarity on, you  
8 presented the CCAP and the Township Association's  
9 proposal for 25 percent being dedicated to the local  
10 share. And within that proposal, they talk about  
11 five percent being dedicated to roads and bridges.

12 MR. RUDDOCK:

13 Uh-huh (yes).

14 REPRESENTATIVE REED:

15 And then later on in your testimony,  
16 you asked for the maximum amount of freedom possible  
17 on the expenditures of those dollars. Is that a  
18 point where your personal opinion differs a little  
19 bit from CCAP, where, you know, leave it up to the  
20 counties, leave it up to the municipalities to make  
21 the decisions? Or would you be inline with the  
22 carveout for the roads and bridges?

23 MR. RUDDOCK:

24 Well, I think the carveout is  
25 imperative. But I think that the decisions should

1 fall upon the shoulders of the municipal leaders to  
2 make those decisions on those bridges and roads, not  
3 upon the shoulders of the county reps. Let them  
4 decide where it's best to be placed. We can't get in  
5 --- I mean, they're really the effective managers of  
6 our properties in Indiana County. That five percent  
7 is part of that 14 percent total makeup of those  
8 dollars. So how it's carved out, all I'm suggesting  
9 is let them make the decision on how it is best to be  
10 applied.

11 REPRESENTATIVE REED:

12 Thanks.

13 CHAIRMAN:

14 Any other questions? Mr. Ruddock, I  
15 just wanted to point out, you know, in my  
16 legislation, I set aside 30 percent of the total  
17 revenue generated goes into the local services fund.  
18 And then of that, 60 percent gets distributed to host  
19 and nonhost municipalities in that county where  
20 drilling is occurring. And then 30 percent goes to  
21 the county, ten percent to the local fire and the  
22 EMS. And within the municipal share of it, I don't  
23 necessarily restrict and say you have to use it on  
24 roads or bridges, because you know, there's 2,600  
25 municipalities out there in the state. Now, this

1 will not affect those that are in counties where  
2 there's no drilling going on, but you know, some  
3 municipalities --- you know, in my district, for  
4 example, you know, they need money for recreational  
5 enhancements and facilities and others want to focus  
6 on economic development. So to as much extent as  
7 possible, I want to give as much flexibility to the  
8 locals to determine how they choose to do it. Okay.  
9 Although, I do know there is --- I mean, House Bill  
10 1489, Representative George has very specific  
11 language about how to drive it out for  
12 transportation.

13           You know, this is the kind of  
14 conversation we could have, as long as we realize  
15 that we all need to be in the same boat pulling on  
16 oars going in the same direction, provide the  
17 revenue, you know, to put in place to enable all this  
18 to happen. And I know how delicate it always is for,  
19 you know, elected officials to step out and say, you  
20 know, this is the right thing to do. But the reality  
21 is we need input and help in the raising of the  
22 revenue, as well as in the ideas on how to distribute  
23 it as well. And I understand that for some, they  
24 feel as though there's a balance that needs to be  
25 struck. But I just want to stress the importance

1 that we can all have ideas on how to spend revenue,  
2 but unless it's there to begin with, those  
3 discussions don't --- aren't going to result in  
4 anything constructive being happening or any  
5 investments in our communities actually occurring.

6 But I appreciate your testimony and  
7 your insights and look forward to working with you  
8 and the local government officials and CCAP as well.

9 MR. RUDDOCK:

10 Thank you very much. Again, I  
11 appreciate just being here and taking the opportunity  
12 to hear some of your thoughts as well. So thank you  
13 very much.

14 CHAIRMAN:

15 Thank you. Thank you. Next, Mr. Mike  
16 Bertolino. He's Chairman of the Board of Supervisors  
17 of Young Township. Mr. Bertolino?

18 MR. BERTOLINO:

19 I believe everyone already has a copy  
20 of the bullet points that I have. First of all, good  
21 evening. I want to thank Representative Reed for  
22 giving me this opportunity, and the board. Mr.  
23 Chairman, my name is Mike Bertolino. I have been a  
24 township supervisor for 32 years. I have actually  
25 been a township supervisor longer than Dave Reed has

1 been alive. And that's not a bad point. First of  
2 all, I would like to thank our County Commissioners,  
3 Dave Reed, Jim Resh and also Sarah White, for the  
4 fantastic job they've done with our township. We're  
5 a very rural township. And anytime I've have had a  
6 problem, they have jumped right on it very  
7 diligently. And thank you again.

8           Let's talk about Young Township. Young  
9 Township, Indiana County, number one in gas well  
10 production. Number one in gas wells, 950 at the  
11 present day in Young Township with 100 more coming  
12 this summer. I've already got half of those permits,  
13 based mostly on CNS development. Number one in coal  
14 producing, over 500 million tons in the last  
15 50 years. Forty-six (46) miles of road to maintain  
16 and PennDOT has 46 miles Of road. If you look at  
17 that, that's one gas well every tenth of a mile with  
18 950. Do the math. Our annual budget for the  
19 46 miles, \$300,000, third poorest in the county.

20           I did a recent research. Mark, I'm  
21 going to touch on some of your numbers here. I took  
22 65 wells right around the Young Township area, did  
23 the meter readings. And Jim, there was a meter on  
24 every one of those wells. These wells were drilled  
25 in the 1970s. The total cubic feet is 900,000 per

1 month at the present \$4 that you saw. I saw \$4 a  
2 day. I looked it up. Revenue is \$3,600 a day,  
3 \$108,000 a month or \$1.3 million a year just for 65  
4 wells. If you take that average through the county  
5 or through the township of 950 wells, Young  
6 Township's revenue is a minimum of \$20 million worth  
7 of natural gas a year. Total revenue monetarily to  
8 the township, zero. 500 million ton of coal total  
9 revenue to the township monetarily, zero.

10           The House bill that you have, I  
11 understand that we, the host municipality, will get  
12 part of it. And I really want you to think about  
13 that hard, because we are the people that are really  
14 sharing the burden, believe me. The 65 wells is only  
15 a part and they were real convenient for me to get to  
16 and a little bit of experience in the gas well  
17 tending, I knew what to do with that.

18           In order for these gas companies and  
19 coal companies to extract whatever material they're  
20 going to extract, they must use the township roads  
21 and the state roads. Currently, the state sets the  
22 road bonding at \$6,000 per mile for dirt roads,  
23 \$12,000 --- \$12,500 per mile for asphalt roads. If  
24 you take one mile if road 12-foot wide, which is in a  
25 very wide travel part, and you put one layer of stone

1 on it, it takes 528 tons at the current bid price  
2 that I just got at \$17.90 a ton, comes out to \$9,451,  
3 a deficit of \$3,400 on what the road bond will pay.  
4 And I have suffered the consequences where the gas  
5 company and the coal company has said here's your  
6 \$6,000, see you later. Who makes up that \$3,400  
7 deficit out of a \$300,000 budget? Young Township,  
8 the taxpayers.

9           That's why it is important that we have  
10 the host fee for every Township that produces gas,  
11 that's very important. Without it, we're going to  
12 starve, we're going to be busted. With the winter we  
13 had, out of a \$300,000 budget, we spent \$25,000 in  
14 snow removal, that's not a lot of budget left for the  
15 next seven to eight months. It's tough. If you put  
16 this money all into one conglomeration and like the  
17 House bill, I think it's 1489, Mr. George, on  
18 transportation, you're never going to see a Port  
19 Authority bus on a dirt road in Young Township. If  
20 you do, I'm going to be the first one on it.

21           The cost of the repairs is gone  
22 completely out of sight. I can remember when we  
23 could buy gravel for \$2 a ton, state-approved stone.  
24 Now the tar and chip is \$25 a ton. It's just gone  
25 out of sight. And our budget with 1,664 people, 900

1 of those are over the age 62. We have no revenue.  
2 Five businesses, three ---.

3 BRIEF INTERRUPTION

4 MR. BERTOLINO:

5 Five businesses in the township, three  
6 bars, a mom and pop grocery store and a gas station.  
7 Most gas companies are willing to work with us.  
8 Thank god, they have, or we'd be in the worst deficit  
9 than we are. Some gas companies are completely  
10 ignorant. They'll will sneak in at night, they'll  
11 tell you they didn't use the road unless you catch  
12 them red handed. What we put up in the spring is  
13 mud. In the summer, we put up with the dust. In the  
14 winter, we put up with the ice and snow. The gas  
15 companies come and go and the townships receive the  
16 calls. We get hit with the burden. My road's muddy.  
17 My road's dusty. My road's turned to ice because of  
18 the truck traffic. Not enough money to take care of  
19 it.

20 One proposal I had, I don't know what  
21 your four percent works out to with those figures on  
22 the 60 wells was, I proposed that no less than a 200  
23 fee --- \$200 fee per year, per well, no matter what  
24 well, as long as it's active on the DEP list, would  
25 revenue our township right now \$190,000. That's

1 two-thirds of our budget. Also, if you want to look  
2 at it a different way, that's \$17 a month for each  
3 well. More people spend more than that for a cell  
4 phone a month. Put it in that perspective, think of  
5 where the gas comes from, the coal comes from, get it  
6 back to the people that's paying the real bill.  
7 That's what it's all about.

8           This would allow us to maintain roads  
9 better, purchase better equipment and be able to put  
10 money away for matching funds. Right now, the  
11 Department of Agriculture has a matching fund out  
12 there, \$603 million, but you have to have 35 percent.  
13 Young Township will never have part of that grant,  
14 because we can't match 35 percent. If township  
15 leaders are smart, they'll take this money and invest  
16 it, put it in some kind of a council that they can  
17 proceed with waterline extensions, sewer line  
18 extensions, matching funds, and also be able to make  
19 safer and better travel for the residents.

20           In conclusion, I'd like to say as a  
21 local official, I'm not against drilling. It's  
22 progress. Mostly we've been regressing. It's time  
23 we progression. The gas companies that have come  
24 alive in the last couple of years have created a lot  
25 of jobs for local guys, young guys in our township,

1 and some of the little businesses and jobsites  
2 around.

3 I'm not against drilling, but I do  
4 really appreciate someone looking into the host fee.  
5 I would think that would be the greatest thing that  
6 could happen. Legislators, you know what it's like  
7 at budget time and when poor townships need money,  
8 you can't hand it out. Your local township comes,  
9 and Dave and I have talked about this, Commissioner  
10 Ruddock and I have talked about this, Senator White  
11 and I have talked about it, the rest of the County  
12 Commissioners, we just can't seem to grasp or pull  
13 anything from anywhere else. It's going bad. And it  
14 is going to get worse.

15 We have not yet seen the Marcellus. I  
16 have taken a trip to Washington County. Marcellus  
17 well with acres of ground, Young Township is ---  
18 three-fourths of it is owned by Consol. There's  
19 going to be numerous Marcellus wells in Young  
20 Township. That ten acres of ground you're never  
21 going to see a Marcellus well in downtown  
22 Philadelphia or Pittsburgh. Take care of the host  
23 municipality. Thank you.

24 CHAIRMAN:

25 Thank you, Mr. Bertolino. Any

1 questions from members?

2 CHAIRMAN:

3 Representative Reed?

4 REPRESENTATIVE REED:

5 Mike, just real quick. Thank you for  
6 taking the time today. And it did rain, so it didn't  
7 mess up the baseball schedule for you here in the  
8 county. Just so I make sure from your testimony, you  
9 would prefer whatever distribution model was used is  
10 based upon the number of active wells in the  
11 community; correct, ---

12 MR. BERTOLINO:

13 Yes.

14 REPRESENTATIVE REED:

15 --- not just if they exempt out  
16 stripper wells for the severance tax? The  
17 distribution should come back to the host  
18 municipality based upon the total amount of wells  
19 that are active, not just the ones who meet the  
20 threshold for the severance tax?

21 MR. BERTOLINO:

22 Yes, I was basing my facts of \$200 per  
23 well on every well, active well, that's on the DEP  
24 list, which would be 950.

25 REPRESENTATIVE REED:

1           Okay. Thanks.

2           MR. BERTOLINO:

3           Okay.

4           CHAIRMAN:

5           I want to make sure --- just to follow  
6 up, I want to make a clarification. So your  
7 suggestion is, is that the revenue derived from a  
8 severance on Marcellus drills should be distributed  
9 by a formula that incorporates the total number of  
10 Marcellus wells plus stripper wells?

11          MR. BERTOLINO:

12          Yes. I'm saying that they --- you  
13 could do it a flat fee or you could do it separately.  
14 I believe in House Bill 1050 --- is it 1050?

15          REPRESENTATIVE REED:

16          Yeah, when we did the state lease that  
17 was the way we proposed it.

18          MR. BERTOLINO:

19          That was defined as the Marcellus, I  
20 believe, coming in would pay the \$1,200 flat fee and  
21 then so much per year along with the stripper wells  
22 and everything else. I would like to see all active  
23 wells, because the wells that were drilled in the  
24 '70s and '60s, my water trucks are still going every  
25 day, every day, over those roads to get rid of the

1 brine water.

2 REPRESENTATIVE REED:

3 Just to clarify, House Bill 1050 for  
4 the information on the amendments, what we did is we  
5 recognized the difference between a stripper well and  
6 its imprint on the community and the Marcellus Shale  
7 well is going to have a much larger imprint.

8 MR. BERTOLINO:

9 Right.

10 REPRESENTATIVE REED:

11 So we weighed it much more heavily,  
12 where if you have a Marcellus Shale well, you're  
13 going to get a lot more of the money distributed, but  
14 you're still going to account for the acid wells in  
15 the communities, at a much lower rate, but they've  
16 been occurring for 50, 60, 70 years in these  
17 communities without any compensation. So we didn't  
18 want to leave those communities behind.

19 CHAIRMAN:

20 I understand it. But it begs the  
21 question, is it fair and appropriate to comp a  
22 stripper well towards the allocation of the revenue  
23 at the same time we're going to except them from  
24 paying the revenue. So we don't want them included  
25 for the purposes of collecting the severance tax.

1 They want to be exempt. But then we do want to count  
2 them on the distribution side.

3 MR. BERTOLINO:

4 Yes, because they are --- they are  
5 producing.

6 CHAIRMAN:

7 I understand they're producing, but  
8 under the stripper exemption, the severance tax  
9 doesn't get applied to them.

10 MR. BERTOLINO:

11 I understand that.

12 CHAIRMAN:

13 So you want to take revenue from a  
14 Marcellus well, but distribute it based on a formula  
15 that includes those wells that aren't paying any  
16 money into the fund?

17 MR. BERTOLINO:

18 That's really not fair to the  
19 Marcellus, but because the trucks and the damage is  
20 still done for the stripper wells.

21 CHAIRMAN:

22 I understand. But I just wanted to  
23 point out that inherent conflict there. The other  
24 thing I just want to thank you for pointing out in  
25 your testimony, the cost of repairing, be they dirt

1 or gravel roads or asphalt roads, the bonding  
2 requirements come nowhere near covering ---

3 MR. BERTOLINO:

4 Not even close.

5 CHAIRMAN:

6 --- the actual cost ---

7 MR. BERTOLINO:

8 Not even close.

9 CHAIRMAN:

10 --- to fix the roads.

11 MR. BERTOLINO:

12 To pave a road --- and I didn't include  
13 this but I have this in here. To pave a road  
14 one-inch thick, 12-foot wide, which your main roads  
15 are 16 to 20-foot wide, one mile long on a \$12,500 a  
16 mile bond, just the material alone is \$29,586.

17 CHAIRMAN:

18 And that's not counting ---.

19 MR. BERTOLINO:

20 That's not counting laying it. You can  
21 add another \$70 to put it down per ton.

22 CHAIRMAN:

23 Yeah. Just one other thing, Mr.  
24 Bertolino. I see on page two of your testimony, if I  
25 could just call attention to it, the second to the

1 last paragraph --- I'm sorry. I'm ahead. It's the  
2 next person's testimony.

3 MR. BERTOLINO:

4 I thought I only had one page. I  
5 thought maybe I was a little smarter than ---.

6 CHAIRMAN:

7 Anyhow, thank you. Appreciate your  
8 insights and your constructive suggestions.

9 MR. BERTOLINO:

10 Okay. Thank you very much.

11 CHAIRMAN:

12 Appreciate it. Thank you. Now, the  
13 gentleman whose testimony I started reading, Mr.  
14 Shirl Barnhart. He's Chair of the Board of  
15 Supervisors for Morgan Township in Green County.  
16 Shirl, welcome.

17 MR. BARNHART:

18 It's really nice to come out whenever  
19 everybody seems to be on the same page, including  
20 industry. The bad part is everybody stole my smoke,  
21 so it's pretty much going to be all the same of what  
22 they said before. But anyway, my name's Shirl  
23 Barnhart, Secretary Treasurer of the Pennsylvania  
24 State Association of Township Supervisors, and  
25 Township Supervisor of Morgan Township in Greene

1 County. With me today is David Sanko, Executive  
2 Director for the Association. Thank you for the  
3 opportunity to appear before you today on behalf of  
4 the 1,455 member townships in the Association. We  
5 appreciate the opportunity to discuss this issue.  
6 It's very important to us.

7           Townships comprise 95 percent of the  
8 Commonwealth's land area and are home to more than  
9 5.4 million Pennsylvanians, nearly 42 percent of the  
10 state's population. These townships are very  
11 diverse, ranging from rural communities with fewer  
12 than 200 residents, to more populated communities  
13 approaching 70,000 residents.

14           Marcellus Shale is impacting a major  
15 portion of Pennsylvania, from Green to Wayne County.  
16 We're all seeing the economic potential there, and  
17 we're also dealing with the negative impacts of the  
18 Marcellus well drilling.

19           The Association supports the severance  
20 tax on the natural gas, providing at least 25 percent  
21 of this tax comes back to the local governments. Of  
22 course, you're never going to ask for more money.  
23 While we believe that House Bill 2443 is a huge step  
24 in the right direction with the inclusion of the  
25 local share of 20 percent, we believe that some

1 improvements need to be made to the bill before it  
2 moves forward, particularly concerning municipal  
3 shares distributed.

4           Townships are excellent fiscal stewards  
5 and are generally among the last to advocate for  
6 increasing taxes. We have done more with less for a  
7 very long time. I think Mike was a prime example.  
8 He has 45-miles of road. He's taken care of it with  
9 a \$300,000 a year budget. That's really unreal.  
10 That's hard to do. We believe the natural gas  
11 severance tax is not a tax on Pennsylvanians, but  
12 rather a tax for Pennsylvanians that will result in  
13 property tax relief. In fact, such a tax would not  
14 increase the cost of gas to consumers in  
15 Pennsylvania, because we're already paying such tax  
16 on gas imported from other states. Instead, a  
17 severance tax would make sure that out-of-state  
18 customers are paying the tax to benefit the  
19 communities in Pennsylvania where the extraction is  
20 taking place. Otherwise, these communities would  
21 need to raise property taxes to cover the costs  
22 associated with the industry impacts.

23           Over the years, we've heard numerous  
24 concerns from our members about gas well drilling.  
25 It is clearly impacting communities across the

1 Marcellus Shale region, both in economic opportunity  
2 and many with negative impacts associated with it.  
3 Our Association is supportive of economic development  
4 and opportunities providing that drilling activities  
5 are conducted in an environmentally responsible  
6 manner, and that the impacts on community and the  
7 environment are mitigated to the extent possible.  
8 Keep in mind that once a healthy environment is  
9 damaged, it takes decades to heal it.

10           In one case, in my municipality you  
11 walk outside my township building, the neighboring  
12 property is a 66-acre gob pile or a slate dump up  
13 there from the coal mine that's no longer there. To  
14 date, \$6 million, a little over \$6 million, has been  
15 put in to try to mediate this pile, and it's not done  
16 yet. While we're using Growing Greener money and the  
17 Ramp Fund and whatever to remediate this pile, we  
18 lost a beautiful trout stream in that area. The Fish  
19 Commission will no longer stock it for us. But it's  
20 starting to come back now. Since we put the money  
21 into it, it's remediated a little bit and we are  
22 starting to get the fish and the local organizations,  
23 like the guys at Walton, they are stocking the area.  
24 But it takes a long time to heal.

25           In western Pennsylvania in particular,

1 we can see the scars that remains of extracting or  
2 harvesting our natural resources from coal to wood.  
3 When the industry is gone, our natural resources have  
4 been exhausted, the damage that remains will be left  
5 to the community and the taxpayers to clean up, while  
6 property values drop in response to the end of the  
7 resource and departure of the industry. This  
8 industry is harvesting a nonrenewable resource and it  
9 has become --- when it has become depleted, many of  
10 the economic opportunities that it has brought may  
11 leave us as well. A severance tax is particularly  
12 needed to enable those areas in the Commonwealth  
13 where the activity is taking place to mitigate the  
14 negative impacts of the industry with funds derived  
15 from the industry now. Otherwise, taxpayers will  
16 need to pay for the cleanup long after the industry  
17 is gone. We believe a severance tax is properly  
18 levied, simply as a responsible way to do business in  
19 the Commonwealth.

20           Keep in mind Pennsylvania is only one  
21 of three natural gas producing states, including New  
22 York and Iowa, that does not have a severance tax or  
23 similar impact on the industry. New York, which has  
24 had a moratorium on natural gas permits due to  
25 concerns for the potential negative environmental

1 consequences of the industry, has plans to levy a  
2 severance tax as well as impose stringent  
3 environmental regulations. The once the moratorium  
4 is lifted, many of the natural gas companies that  
5 currently work in northern Pennsylvania have plans to  
6 move back to New York.

7 I'm not going to go through all this  
8 with the computations of how the taxes are put on.  
9 We've already gone through it a few times, so I'm  
10 just going to skip over that.

11 One thing, with the percentage going to  
12 the local emergency management, we believe it  
13 properly allocates the funding for emergency first  
14 responders in the effective counties. We contend  
15 that this funding should come out of the state's  
16 share of these funds. In addition, eligible  
17 volunteer fire companies should be able to use these  
18 funds for equipment, training and recruitment and  
19 retention of volunteers. Volunteer fire companies  
20 are the first responders and should have the  
21 necessary training to know how to participate in a  
22 fire or disaster involving natural gas. Our primary  
23 concern is on how the municipal share is divided.  
24 And you can see right there, we have some ideas.  
25 We've been meeting with the County Commissioner's

1 Association and we've --- Commissioner Ruddock has  
2 already spoke to that.

3           That's pretty much going to be my  
4 testimony without repeating everybody else's  
5 testimony. We do have a lot of concerns with the  
6 water. There's a lot of water being moved around and  
7 taken from the streams. They don't have the capacity  
8 to treat it, so it's not being returned to the  
9 streams. Municipalities would have to try to replace  
10 that with waterlines and infrastructure development.  
11 I understand that the drilling companies are  
12 responsible to replace what they take away, but we'll  
13 be responsible to maintain it after it's there.

14           In closing, our Association supports  
15 the severance tax as a means of easing future  
16 property burdens caused by impacts of this industry,  
17 and believes that this proposal is a step in the  
18 right direction. However, changes need to be made to  
19 provide a fair means of distributing these funds to  
20 the affected municipalities. One thing about --- you  
21 have a real opportunity right now if the funds come  
22 to the local affected municipalities, especially the  
23 host municipalities. This money is not going to get  
24 lost anywhere. It's going to go directly to benefit  
25 the people. We can't even vote ourself a tax raise

1 --- you know, a pay raise. It's going to go straight  
2 to the people. It's going to go for blacktop. It's  
3 going to go for stone. It's going to go to replace  
4 equipment to meet the needs for winter maintenance  
5 and whatever recreation. Or possibly even in  
6 affected municipalities where lot of these residents  
7 are affected by the hardships with the dust and the  
8 trucks or whatever, maybe we can give them a tax  
9 break for the year on a township tax. We'd love to  
10 be able to say, hey, okay, this year thanks to the  
11 severance tax, you won't have to pay as much in the  
12 township tax this year. So there's a lot of things  
13 --- if you leave it to the municipal level, there's a  
14 lot of things that we have the opportunity to do for  
15 the people, but it will go directly to the people in  
16 one way or the other. Thank you.

17 CHAIRMAN:

18 Thank you, Mr. Barnhart. Any  
19 questions?

20 REPRESENTATIVE GIBBONS:

21 I just want to ---.

22 CHAIRMAN:

23 Representative Gibbons?

24 REPRESENTATIVE GIBBONS:

25 I just wanted to point something out

1 and Chairman Levdansky, you probably would point this  
2 out. One thing I notice is when you guys --- PSAT's  
3 asking for 25 percent, you're actually including the  
4 Conservation District's three percent in that 25. So  
5 actually, the difference between Chairman Levdansky's  
6 bill and the percentage you're asking for the local  
7 is actually a two-percent difference, not a  
8 five-percent difference.

9 MR. BARNHART:

10 Yeah.

11 REPRESENTATIVE GIBBONS:

12 Because his 20 percent plus the three  
13 percent that he's putting for Conservation District  
14 would be a total of 23 of how you're defining the  
15 local share from what you're requesting. So it's  
16 actually roughly a two-percent difference. Now, I do  
17 realize that, you know, there are some differences as  
18 to how the House Bill 2443 is driving out that money  
19 to the municipalities. And I would say that  
20 certainly, your concerns are valid as to making  
21 certain that the host municipalities are getting, you  
22 know, the larger share of that, because I do agree  
23 that you're going to face the biggest impact. But  
24 the percentage-wise, I think we are --- I agree we're  
25 getting very close, actually two percentage points

1 difference at this point between Chairman Levdansky's  
2 current bill and what you're asking for.

3 MR. BARNHART:

4 Yeah. We did ask for at least  
5 25 percent, but we'll take whatever we can get. If  
6 it's 30 percent, I'll be more than happy to take  
7 that.

8 CHAIRMAN:

9 Thank you. Shirl, I just want to call  
10 attention to one thing in your testimony, on page two  
11 at the bottom, the next to the last paragraph.

12 MR. BARNHART:

13 Okay.

14 CHAIRMAN:

15 Okay. And I'll quote, we see that low  
16 producing stripper wells would be exempt from the tax  
17 under the legislation. We agree with this concept,  
18 but question whether the maximum exempt production of  
19 60,000 cubic feet per day is too high and should  
20 perhaps be lowered.

21 MR. BARNHART:

22 Yes.

23 CHAIRMAN:

24 Just for your information, even with  
25 this exemption in for traditional stripper wells, the

1 organization that represents the stripper well  
2 producers remains opposed to the legislation. And  
3 they even want to see that 60,000 raised to 90,000.  
4 Okay?

5 MR. BARNHART:

6 I understand.

7 CHAIRMAN:

8 And they'll probably still be against  
9 the legislation. So you know, you make a very good  
10 point. I mean, what is the definition of a --- you  
11 know, of a small producer that operates marginally in  
12 terms of a profit margin and, you know, how do you  
13 arrive at that figure? That is --- it's a challenge  
14 to do that. But I just wanted to, you know, for the  
15 record, note that even with the exemption, you know,  
16 in the legislation as it is, the Independent Oil &  
17 Gas Association remains opposed to the legislation.

18 And just one final thing I just want  
19 to point out. It has been vexing and a challenge for  
20 me to try to come up with a formula to distribute the  
21 local share of this between host counties and host  
22 and nonhost municipalities within a county. It's  
23 been extraordinarily challenging. I think we're  
24 getting closer to a consensus, but I recognize that  
25 we're not quite there yet. But the discussions that

1 I and my staff have had with all the local government  
2 organizations and, you know, from the Borough's  
3 Association, League of Municipalities and the  
4 Township Association and CCAP as well, I think, you  
5 know, we have had fruitful discussions and we're  
6 getting closer and closer to a consensus, though we  
7 might not be there entirely, but it's not for lack of  
8 trying. Okay?

9 MR. BARNHART:

10 Yeah, I believe we're all on the same  
11 page, and we're very happy to see some movement now.  
12 I mean, like Mike said, you know, we've got nothing  
13 so far. And the fact that you introduced a bill  
14 that's going to try to help us is amazing, and we're  
15 willing to work with you whatever way we can.

16 CHAIRMAN:

17 Okay. Thank you very much, Shirl.

18 MR. BARNHART:

19 Thank you.

20 CHAIRMAN:

21 Appreciate it. Now, the last person on  
22 the agenda, Beverly Braverman. Beverly is the  
23 Executive Director of the Mountain Watershed  
24 Association. Beverly?

25 MS. BRAVERMAN:

1           I think I'm stiff from sitting. I want  
2 to thank you all, first of all, for spending your  
3 evening here listening to us. Again, I'm going to  
4 speak as to the last gentleman, and say that a lot of  
5 my thunder has been taken. And I'm happy it has  
6 been, because I kind of showed up thinking --- or  
7 when I prepared my testimony, I was thinking that I  
8 was going to have to persuade people that having the  
9 severance tax was a good idea. And so I think that I  
10 kind of leaned in that direction more than I really  
11 needed to. So I'm going to skip around in my  
12 testimony, too. And those of you who have it, please  
13 excuse me.

14           I think that I would like to also  
15 clarify a few things. One of the things, there was a  
16 comment about the Environmental Stewardship Fund and  
17 why the money should go there versus maybe going  
18 specifically to counties and townships where the  
19 drilling takes place. I think it should go to both.  
20 And the reason is that the Environmental Stewardship  
21 Fund supports watershed restoration. And these  
22 watersheds span counties, span townships, so it's not  
23 just, you know, one area, municipal area, or  
24 governmental entity where the problem may occur. It  
25 is a discharge that could be polluting 20 miles of

1 stream that spans three or four different townships.  
2 So I think that there needs to be a realization of  
3 that.

4           Basically, May 3rd and 4th, there was a  
5 Marcellus Shale Policy Conference that was held at  
6 Duquesne University. It was presented by the  
7 Pennsylvania Environmental Council. And I was happy  
8 to attend this conference and see that throughout the  
9 conference, there was a recurring discussion about  
10 the need for a severance tax. And I think it's  
11 important that you understand that this conference  
12 was attended by people like me, community grassroots  
13 people, it was attended by municipal governmental  
14 people, but it also was attended by industry. And I  
15 did not get the sense from the over 300 attendees  
16 that anybody was saying, at least at this conference,  
17 that we shouldn't have or didn't need a severance  
18 tax. I think that no one, at least at the parts of  
19 the conference I attended, suggested that assessing a  
20 reasonable tax will make the gas industry leave the  
21 state. That was not even an issue at that point.  
22 Although over the past year, I have heard that stated  
23 by different people, they'll leave. Where are they  
24 going to go? They can't take anywhere and take the  
25 gas out of the ground unless the gas is in the

1 ground. So where the gas exists in Pennsylvania,  
2 they'll stay here, they'll drill.

3 Also at the conference, it became clear  
4 that many people felt we need to slow down this  
5 process. Comments indicated that the state was  
6 having difficulty keeping up with the necessary  
7 monitoring and oversight. And I do believe that,  
8 Representative Levdansky, you asked someone whether  
9 there was adequate staff in DEP. I think it was Mr.  
10 Resh who was representing the Conservation District.  
11 I think that there is inadequate staff. But I also  
12 think the Conservation Districts could be helping us  
13 expedite processes and oversee these processes in  
14 their own communities. And so we really do support  
15 this Conservation District funding.

16 One of the things that the Watershed  
17 Associations have done over the past, I don't know,  
18 ten years with Growing Greener has been to work very  
19 closely with their Conservation Districts, with the  
20 watershed specialists who are housed in the  
21 Conservation Districts, and it has been a terrific  
22 partnership. So I think that's very important.

23 I'm going to speak to three different  
24 issues that have already been addressed, community  
25 externalities, maybe recreation has not been

1 addressed very much, so I am going to talk about that  
2 somewhat, and Growing Greener. So we're going to  
3 skip to page two if I can get to it. Basically, I  
4 come from Fayette County. It's a very poor county.  
5 I think we're even poorer now than Greene County, and  
6 so we need to have compensation at some point for the  
7 added burdens of gas drilling. We don't need any  
8 more burdens. We're already dealing with, you know,  
9 the 150 years left over from the coal mining burdens.  
10 So we don't need any more burdens from gas drilling  
11 without some compensation for being a host  
12 municipality, for road maintenance, for emergency  
13 response agencies, and to take care of water  
14 problems. The companies that are drilling in our  
15 areas, are leasing in our areas, do not need a  
16 subsidy from communities like ours with per capita  
17 incomes of less than \$14,000. They don't.

18           One of the other issues that we are  
19 very concerned about is that the companies are coming  
20 into our communities and they are not performing  
21 adequate water testing to determine sufficient  
22 baseline data, to assure accuracy if water resources  
23 are contaminated. They only test for the  
24 constituents required by DEP, which we know are not  
25 adequate to the test. And when we ask them if they

1 are testing for BTX, benzene, toluene, and xylene,  
2 we're getting the run around basically. So while  
3 someone leasing their property may have sufficient  
4 funds to have their water properly tested, maybe  
5 their neighbor did not lease their property and they  
6 are having to dig into their own pockets to have  
7 their water completely tested or they're going  
8 without a baseline test, which is very dangerous.

9           Someone at the Marcellus Policy  
10 Conference, and I believe it was someone in DEP Oil &  
11 Gas, stated that they felt it was bad business for a  
12 company not to do thorough water testing. We felt it  
13 is, too. It is. But somehow that is what they are  
14 doing, nonetheless. Part of any severance tax should  
15 be able to be used to ensure adequate, appropriate  
16 water sampling and testing in communities hosting  
17 these wells.

18           I said before, and I will repeat, that  
19 local communities should receive part of this tax to  
20 pay for damaged infrastructures. We have the same  
21 problem that the other municipalities have stated,  
22 that we have large trucks on our rural roads and they  
23 simply are not being maintained. Funds need to be  
24 set aside to repair and upgrade local infrastructure,  
25 to improve monitoring and oversight of the industry

1 and to help protect the state's environmental vision.

2           It is really bad business for our state  
3 government to give away the piece and tranquility of  
4 our public lands, the environmental integrity of our  
5 unfragmented forest expanses and the pristine water  
6 resources and landscapes for which people from all  
7 over the globe retreat here to recreate without  
8 exacting a tax that will support environmental  
9 protection and restoration and without providing our  
10 communities with funds to be able to maintain that  
11 level of recreational status.

12           Recreation is a growing part of  
13 Pennsylvania's economy. In areas like ours, the  
14 Laurel Highlands, we're sharing the state public  
15 lands, roadways with countless water trucks being  
16 unable to access a stream for boating due to improper  
17 water withdrawals at the same access site. I mean,  
18 people couldn't even put their boats in the water to  
19 recreate because the trucks kept coming in, coming in  
20 and taking water out of the stream. Anyone who uses  
21 our state forest will feel this impact from hunters  
22 and environmentalists, to farmers, bikers and hikers.

23           For the last 14 years, Pennsylvania has  
24 worked to develop programs leveraging funds so that  
25 watershed groups could submit grants to reclaim,

1 restore and remediate environmental problems in their  
2 communities. The last ten years, this program was  
3 dubbed Growing Greener, and resulted in numerous  
4 on-the-ground mine drainage treatment systems  
5 throughout the Commonwealth. The systems returned  
6 miles of degraded streams to healthy ecosystems.  
7 Streams that couldn't sustain fish populations now  
8 do, and streams where you couldn't fish, you now can  
9 fish once more.

10 I would like to talk about this  
11 leveraging, because I think it's something that we  
12 overlook at times. And that is, for example, in our  
13 community, our county money, Growing Greener was a  
14 million --- it was around a million dollars and  
15 Mountain Watershed Association was given a \$120,000  
16 of that. We actually had three projects. This was  
17 for one project. \$120,000 of the county initiative  
18 funding to put in a water supply system, municipal  
19 waterlines basically, public waterlines because we  
20 have people in our community who do not have potable  
21 water. We took that \$120,000, and we matched it with  
22 other funds from the state, from private foundations,  
23 and it added up to \$1.2 million to put in roughly two  
24 and a half miles of stream that supplied 53 families  
25 and probably 150-plus people with a potable water

1 supply. That is one of the things that could happen,  
2 because you can leverage Growing Greener money with  
3 Office of Surface Mining funding from the Appalachian  
4 Clean Streams Initiative, which we have done. You  
5 take a Growing Greener pot of money and you match it  
6 with \$100,000 from the federal government. You take  
7 that money and you match it with Department of  
8 Agriculture money to the tune of, in our case, almost  
9 a million dollars. So this pot of money that we  
10 would be getting would be --- would grow. It would  
11 be leveraged into many more times what it is.

12 I would like to say that there --- and  
13 I think you do have this renewed Growing Greener  
14 coalition information. I'm just going to read a  
15 little bit of this, because I think it's very  
16 important. A report released last month by the  
17 Pennsylvania General Assembly's Legislative Budget  
18 and Finance Committee showed that in just the past  
19 four years Growing Greener has helped people protect  
20 more than 33,000 acres of Pennsylvania's family  
21 farmland, conserve more than 42,000 acres of  
22 threatened open spaces, improved public recreation  
23 for 234 community park projects, restored more than  
24 1,600 acres of abandoned mine lands. I'm not going  
25 to read all of this, but it's very critical for you

1 to read this statement so that you can see how  
2 important the Environmental Stewardship Fund is and  
3 why it should be part of the funding from the  
4 severance tax.

5           There are still over 4,000 miles of  
6 degraded streams throughout the state from past  
7 extraction, along with a current burgeoning threat of  
8 additional degradation from the mammoth water needs  
9 of gas drilling. Pennsylvania needs to restore those  
10 streams that are still degraded, but it also must  
11 protect those systems, those onsite treatment  
12 systems, that are currently functioning. All the  
13 restored streams thriving as a result of the past 10  
14 to 14 years' efforts to correct the massive damages  
15 to our state's water resources. These systems  
16 require oversight and maintenance at a time when we  
17 are being told the Growing Greener funds have  
18 disappeared. A perfect use of a significant part of  
19 this gas severance tax should be for the continuance  
20 of the Growing Greener Fund, so that the many  
21 watershed groups working to restore their communities  
22 can continue this good work and secure funds to  
23 oversee and maintain these treatment systems. If  
24 these systems are not maintained, the money spent on  
25 them will be for nothing.

1 I would like to say to many of you who  
2 live in these rural areas, we are not a resource  
3 colony, but I think we certainly feel like we are at  
4 times, and specifically when all of the resources are  
5 taken out of our communities, and we get nothing back  
6 if. And I think I will stop there. Are there any  
7 questions?

8 CHAIRMAN:

9 Thank you, Beverly. Any questions from  
10 the members?

11 CHAIRMAN:

12 I agree.

13 MS. BRAVERMAN:

14 Thank you.

15 CHAIRMAN:

16 Beverly, in particular, I just want to  
17 say --- I mean, I know the good work that your  
18 association has been doing for years and years and  
19 years to protect and to clean up a lot of polluted  
20 waterways here in southwestern Pennsylvania. So I  
21 just want to say thanks for all the work that you do  
22 and also for your understanding on why funding  
23 Growing Greener is important to everybody in the  
24 state.

25 MS. BRAVERMAN:

1 Well, I think that specifically we were  
2 looking at, it's very important to fund Growing  
3 Greener. It is critical to get this money back into  
4 local municipalities I can't even say that enough. I  
5 totally agree with that, because we do sit and watch  
6 the roads be destroyed. We have people without  
7 potable water. There is so much leaving our  
8 communities, the very substance of our communities,  
9 in the form of coal, in the form of stone and it will  
10 now be in the form of gas. That is not coming back,  
11 and that simply is not a just result.

12 CHAIRMAN:

13 Thank you very much.

14 MS. BRAVERMAN:

15 All right. Thank you very much.

16 CHAIRMAN:

17 Thank you, Beverly. That concludes the  
18 agenda that I have for the House Finance Committee.  
19 But if there's anybody in this wonderful attentive  
20 audience that has any comments or suggestions that  
21 you'd like to make, I'm more than willing to listen.  
22 I know before ---. You have to come up front,  
23 because we have a stenographer that's going to record  
24 this for the record. And sir, before you introduce  
25 yourself, I just want to introduce Dan Surra, a

1 former colleague of mine from Elk County. Dan is the  
2 Governor's advisor on hunting, fishing and  
3 conservation. Am I missing part of the title, Dan?

4 MR. SURRA:

5 No.

6 CHAIRMAN:

7 Thanks for being here.

8 MR. SURRA:

9 Only the government could come up with  
10 a title like that.

11 CHAIRMAN:

12 Sir?

13 MR. STEWART:

14 I'm Rick Stewart, and I used to play  
15 high school football with Dan a long time ago.

16 MR. SURRA:

17 Oh, my god. I didn't recognize you.

18 MR. STEWART:

19 I work in the gas industry and Jim was  
20 using me as a consultant a little bit. I give Jim  
21 all of the credit in the world for going two sides.  
22 You know, he's the person that wants the money. We  
23 can argue I'm a person giving the money. I think you  
24 all have my little piece of paper there.

25 CHAIRMAN:

1                   Yeah.

2                   MR. STEWART:

3                   I see a whole lot of numbers and a  
4 whole lot of data. And if we don't pay the tax,  
5 you're just imposing so much cost that it's crazy.  
6 It's punitive. It's crazy. It's not fair. You  
7 know, I'd hope you would look at that. If you read  
8 that, you know, I think I made some pretty good  
9 points. When you take care of a whole bunch of  
10 wells, I've been doing it for many, many years with  
11 good numbers, and it will make so many wells  
12 noneconomic, that it is --- you'll have to bug them.  
13 You're going to put companies bankrupt. The states  
14 going to have to plug the well, farmers aren't going  
15 to have gas. You don't have to pay the tax anyway.  
16 Burdening every one it is really silly. You asked  
17 Jim, do you still have six wells coming in on one  
18 farm, how do I know that that one isn't making one  
19 and the other one is making 61.

20                   BRIEF INTERRUPTION

21                   MR. STEWART:

22                   I can show you lots and lots of --- and  
23 I would share my data with you. I could share my  
24 data with them. And I see countless information  
25 every day for the last 40 years --- maybe not

1 40 years. Thirty (30) years, 35 years. So you have  
2 a farm, as Jim was saying, you have --- personally,  
3 person I bought a bunch of wells from my customers.  
4 There is 30 wells there. There is one landowner ---  
5 two landowners. So you have a meter here, so I can  
6 pay that landowner and a number of meters for my own  
7 sake, so I can monitor leaks and whatnot on the other  
8 landowner. And your legislation suggests that I  
9 spend, whatever, \$4,000 times 30 meters is ---  
10 whatever that is, \$120,000, for which there's no  
11 benefit other than to satisfy the government. And  
12 then you're going to say --- and your legislation  
13 says fill out quarterly reports, even though I don't  
14 have to pay the taxes, which is a burden.

15           And now, because I have to monitor  
16 every one of these meters, so now there's a well out  
17 in the cornfield and once a month somebody goes there  
18 just to make sure nothing's wrong and all that kind  
19 of stuff, and you're monitoring these meters which  
20 are tipping you off to anything being wrong, but to  
21 do due diligence, you go to the well once a month.  
22 And these are all wells making, whatever, four, five,  
23 three, six, seven, you know, mcfs every day. And you  
24 add them all up, and they might average six mcfs a  
25 day, seven mcfs at the very, very most. And you're

1 going to say the legislation says don't spend \$4,000  
2 on every one of them, so that you can monitor these.  
3 You know, so that you can prove that you don't have  
4 to pay the tax. And I wrote in your little thing  
5 there that take a well that makes four mcfs a day,  
6 and my numbers in your thing are high --- or low.  
7 That income is low. As one of these people said, the  
8 price of gas, your assistant, today is \$4.09.

9           Now, the landowner who gets an eighth  
10 of that, it's very common in gas wells for there to  
11 be override, so somebody else getting is \$16,000. So  
12 the person or collection of people who own the well  
13 are getting .825. You do the math at four mcf a day,  
14 and there's \$2,442, if I remember right, left at the  
15 end of the year. That assumes you're not hauling any  
16 water, that assumes you don't have any major repairs  
17 to your pipes, you don't have to replace a pipeline.  
18 So at the end of a well life, you're sitting there  
19 making whatever three, four, five, six a day. The  
20 price of gas ---.

21           CHAIRMAN:

22           Can I ask you a question?

23           MR. STEWART:

24           Okay.

25           CHAIRMAN:

1                   Just explain for a layman, forget  
2 legislation. Right now, what's in requirement for  
3 metering?

4                   MR. STEWART:

5                   Somewhere you're putting gas into a  
6 pipeline and getting paid for it, so that the utility  
7 --- so in this case I'm talking about, so I have a  
8 pipeline sitting on people's natural gas line. Okay?  
9 And they're paying me off of that meter. It gets  
10 tested once a year per contract. If I think it's  
11 wrong or they think it's wrong, we can each say I  
12 want that meter tested. And if I think it's wrong  
13 and I say I want that meter tested and there's  
14 nothing wrong with it, I have to pay. So me and the  
15 landowner both have the same feelings, the more money  
16 the landowner gets, the more money I get.

17                  CHAIRMAN:

18                  So is it one meter per landowner?

19                  MR. STEWART:

20                  Well, now here --- that's why I'm  
21 getting paid for the gas, okay, where I deliver it  
22 into somebody's pipeline. In this case in point, I  
23 have two landowners, so I have a meter on this one  
24 landowner, so that I can pay him. And I have a  
25 number of meters on the other landowner, just so I

1 can make sure I don't have any pipeline leaks or  
2 anything like that. So that's kind of --- does that  
3 answer your question?

4 CHAIRMAN:

5 Well, it sounds then to me say, for  
6 example, us three are landowners, ---

7 MR. STEWART:

8 Okay.

9 CHAIRMAN:

10 --- and we all have a contract with  
11 you. You're paying each of us royalties.

12 MR. STEWART:

13 Right.

14 CHAIRMAN:

15 He has ---.

16 MR. STEWART:

17 I need to be able to quantify that. I  
18 mean, ---.

19 CHAIRMAN:

20 Has five wells, I have ten, he has  
21 three.

22 MR. STEWART:

23 Right.

24 CHAIRMAN:

25 So you know, ---

1                   MR. STEWART:

2                   What's very common ---.

3                   CHAIRMAN:

4                   --- how do you know how much production  
5 comes off of each well on each landowner?

6                   MR. STEWART:

7                   I know I have enough meters, so I can  
8 pay you, so I can pay him, so I can pay him. Can I  
9 tell you how much each and every one of the wells on  
10 your property feed? No, I can't. Can I tell you how  
11 much all of the wells from your property feed? Yes,  
12 I can. And again, so some somebody drills a new well  
13 and they drill a Marcellus well, which is what got  
14 all this started, and these numbers are really big,  
15 I'm going to go invest \$4 million. What's the price  
16 of the meter? Now I bought --- I work for a company  
17 takes care of --- I run a company that takes care of  
18 whatever that piece of paper says, almost 2,000 gas  
19 wells. As I said, I see lots of numbers. Two  
20 percent of them feed over 60, 29 percent feed under  
21 5, 29 percent of them feed between 5 and 10. I don't  
22 remember the numbers real well, maybe 3 or 4 or  
23 5 percent feed between 50 and 60, et cetera. So  
24 we're placing a tremendous economic burden on these  
25 old wells. So I buy these wells. I know they're old

1 wells and I buy them. I know that they're feeding  
2 whatever it was when I bought them, you know, six,  
3 seven, eight mcf. I know they're going nowhere but  
4 down. Now, you're going to come along or --- as it's  
5 written, and say, okay, you laid your money down, the  
6 utility, the gas buyers, there's a lot of cost  
7 shifting going on in the last, whatever, ten year  
8 from the gas buyers to the producers, and then the  
9 price of gas plummets, so I make an economic decision  
10 based on gas prices. I say, hey, buddy, I'll pay you  
11 this much for your gas well. And I know the  
12 economics, I've been doing this for a long time. And  
13 now, you come along and I got a well that's making  
14 three, assuming again that I have no major repairs  
15 --- I mean, maybe four is a higher price of today's  
16 price. And I'm coming out of \$2,400, now you're ---  
17 now your legislation purposes that I go spend \$4,000  
18 on every one on top of that, now I have to get in  
19 there more often to monitor that meter, to maintain  
20 that meter, so now I have a well out in the farm  
21 field that I can pretty often park here and walk  
22 100 yards out to there, you know, make sure nothing's  
23 wrong and there's no meter out there. Now I have a  
24 meter there. See, what am I going to do build a  
25 road? And the farmer is going to get really mad at

1 me because he says geez, you just took another four  
2 acres.

3 CHAIRMAN:

4 Let me be clear about this. Okay. The  
5 effort here isn't designed to make things more  
6 cumbersome and burdensome for business people like  
7 you, but if we're going to have an exemption, if  
8 you're going to say we want to be exempt from paying  
9 the severance tax, then whatever that agreed-to  
10 production level we agree on, there's got to be some  
11 way to verify it.

12 MR. STEWART:

13 So you have to have a meter somewhere  
14 if it's 60. So if I have ten wells, you could write  
15 it so in my example, so I have this person coming in  
16 with a meter here and this person coming in with a  
17 meter here and that meter adds up to less than 60,  
18 why go back and put a meter on eight more wells  
19 behind that?

20 CHAIRMAN:

21 No. I'm not saying --- I understand  
22 that. I get that. But if we're going to use 60,000  
23 as the breakoff, then we got to --- then we somehow  
24 have to be able to verify that. That's all I'm  
25 saying. Okay?

1                   MR. STEWART:

2                   I understand.

3                   CHAIRMAN:

4                   You know, it's like we have a poverty  
5 exemption in the state personal income tax code.  
6 Okay. And if roughly for a family of four, if you  
7 make less than \$32,000, you're exempt from paying the  
8 state personal income tax. But you still have to  
9 file an income tax return to verify what your income  
10 is. So all I'm looking for ---

11                   MR. STEWART:

12                   But they're still ---.

13                   CHAIRMAN:

14                   Sir, let me finish, okay. All I'm  
15 looking for is suggestions as to how we can verify  
16 what the production level is in a way that doesn't  
17 place undue costs. I mean, I understand if you got  
18 eight wells and the sum total of all of them comes to  
19 30 or 40 thousand. I understand that.

20                   MR. STEWART:

21                   Okay.

22                   CHAIRMAN:

23                   But at some point, at some point, we've  
24 got to be able to measure it to verify that it's a  
25 stripper well, and should be exempt.

1                   MR. STEWART:

2                   Well, then perhaps the way to do it  
3 just is just what you said, is the --- hey, if  
4 there's a meter over 60, I want some meters behind  
5 it, which I don't particularly like, but I understand  
6 your point and if the meter is under 60, no, I don't  
7 need meters. And that's a middle ground. I think  
8 that would make you happy, and it would ---.

9                   CHAIRMAN:

10                  Yeah, we can --- you know, I mean, I'll  
11 read your testimony, you know, over the next couple  
12 of days. And yeah, I'm looking for a way. It needs  
13 to be --- we need to verify whatever the production  
14 level is that we decide to exempt. That's all that  
15 I'm saying. And how can we do that in a way that is  
16 not administratively burdensome or costly, frankly,  
17 to either you or the Department.

18                  MR. STEWART:

19                  I agree.

20                  CHAIRMAN:

21                  Okay.

22                  MR. STEWART:

23                  I agree, but be aware that all of the  
24 old wells, the way it's written, there is a  
25 tremendous burden being put on them, many of which

1 can't afford it.

2 CHAIRMAN:

3 Okay. If we took care of this issue  
4 for you. If we could work out the details  
5 administratively so that we understand we're going to  
6 exempt everything under 60,000, and we work things  
7 out so that, you know, you don't have to --- you  
8 know, you could monitor the level and then only do  
9 the backup if you hit the threshold, if we work all  
10 that out, will you support a severance tax?

11 MR. STEWART:

12 I agree that the state needs money, and  
13 somehow you have to raise it. I mean, I agree. I  
14 don't have a problem with that. I mean, you don't  
15 want me to say that, but you can read it. But my  
16 political opinion is that everyone who spoke here,  
17 you know, to some degree is a user, you know. Do I  
18 have a well that makes water and water trucks running  
19 all over? No, I don't. I never --- I always stayed  
20 away from all those kinds of wells. Being tax that  
21 ---.

22 CHAIRMAN:

23 Look, I'm going to give other people  
24 the opportunity. I will follow up with you, okay,  
25 from a practitioner's perspective. Okay. Thank you.

MR. STEWART:

Thank you.

CHAIRMAN:

Anybody else? Well with that, thank  
you very much, all of you individually, for your  
input and constructive suggestions.
