

STATE OF GRANDFAMILIES **2016**

RAISING THE CHILDREN OF **THE OPIOID EPIDEMIC:**

SOLUTIONS AND SUPPORT FOR GRANDFAMILIES

**generations
united**
Because we're stronger together™

Executive Summary

More than 2.5 million children are raised by grandparents, aunts, uncles, siblings and other extended family and close family friends who step forward to care for them when parents are unable.

More than 2.5 million children are raised by grandparents, aunts, uncles, siblings, other extended family and close family friends who step forward to care for them when parents are unable.¹ Although data is limited, research shows parental substance use is the most common reason these grandfamilies come together to raise children who would otherwise go into foster care.² With the rise in heroin and other opioid use, more relatives are raising children because the parents have died, are incarcerated, are using drugs, are in treatment or are otherwise unable to take care of their children. The vast majority of children being raised by relatives live outside the formal foster care system. Yet the child welfare system relies heavily on relatives, so much so that 29 percent of all children in foster care are living with relatives.³

After years of decline in the overall numbers of children in foster care, the numbers are rising. Experts say the opioid epidemic is responsible for this trend.⁴ Relatives are being asked to care for these children even more than before. In 2014, more than a third of all children who were removed from their homes because of parental alcohol and drug use⁵ were placed with relatives.⁶ Yet the impact of parental

substance use disorders on grandfamilies is not a new challenge. For decades grandparents and other relatives have provided an essential safe haven for children whose parents have been unable to parent due to alcohol use and each new drug epidemic – from crack cocaine to methamphetamines to opioids.

Grandfamilies affected by substance use disorders face a range of unique social, financial, physical and mental health challenges. Despite challenges, the growing reliance on grandfamilies is best for children whose parents cannot raise them. Decades of research repeatedly confirms that children who cannot remain with their birth parents thrive when raised by relatives and close family friends.⁷ They have more stable and safe childhoods than children raised by non-relatives.⁸ Public policies should better support children and caregivers in grandfamilies inside or outside the formal foster care system while offering services to birth parents in order to keep children safely with their parents whenever possible.

KEY FINDINGS

- 2.5 million children are being raised in grandfamilies or kinship care with no birth parents in the home (3% of all children).⁹
- 29% (120,334) of children in foster care are being raised by relatives.¹⁰
- For every child in foster care with relatives, there are 20 children being raised by grandparents or other relatives outside of the foster care system.¹¹
- The percentage of children in foster care with relatives has increased from 24% in 2008 to 29% in 2014. At the same time, placements in non-relative family foster homes and group settings have decreased.¹²
- More than 1/3 of all children placed in foster care because of parental alcohol or drug use, are placed with relatives.¹³
- More than 40% of children in foster care with relatives in 2014 were removed from their parents' care because of parental alcohol or drug use, up from 34% in 2008.¹⁴

RECOMMENDATIONS

- ▶ Reform federal child welfare financing to encourage a continuum of tailored services and supports for grandfamilies, including kinship navigator programs and other services for children, parents and caregivers to prevent children from entering or re-entering foster care.
- ▶ Ensure children in foster care are placed with families, prioritize placements with relatives when possible and provide the supports they need to care for the children.
- ▶ Promote services to children and caregivers in grandfamilies through the network of organizations serving older Americans by urging all states to maximize use of the National Family Caregiver Support Program.
- ▶ Ensure grandfamilies can access financial assistance needed to meet children's needs by improving access to Temporary Assistance for Needy Families and providing time-limited financial support for children who are candidates for foster care.
- ▶ Provide an array of legal options to grandfamilies by:
 - *Educating relatives on their full range of legal options and improving their access to legal assistance*
 - *Identifying and engaging relatives from the time children come to the attention of the child welfare system*
 - *Urging adoption of the Model Family Foster Home Licensing Standards so more relatives can be licensed foster parents*
- ▶ Elevate and promote best practices for serving children, parents and caregivers in grandfamilies by creating and supporting a National Technical Assistance Center on Grandfamilies.

Grandfamilies Provide Safe Homes for Children Affected by the Opioid Epidemic

“For my 50th birthday, I got a 2-year-old. My story isn’t unique. This epidemic has devastated communities all over the country. It doesn’t discriminate against age, race, gender or income. It affects all of us. But sometimes it feels like folks in Washington don’t hear these stories.”¹⁵

- Pamela Livengood, grandparent caregiver

Like Pamela’s grandchild, more than 2.5 million children are raised by grandparents, aunts, uncles, siblings, other extended family and close family friends who step forward to care for them when parents are unable.¹⁶ Although data is limited, research shows parental substance use is the most common reason these grandfamilies come together to raise children who would otherwise go into foster care.¹⁷ With the rise in heroin and other opioid use, more relatives are stepping up to raise children whose parents have died, are incarcerated, currently using drugs, in treatment or otherwise unable to take care of their children.

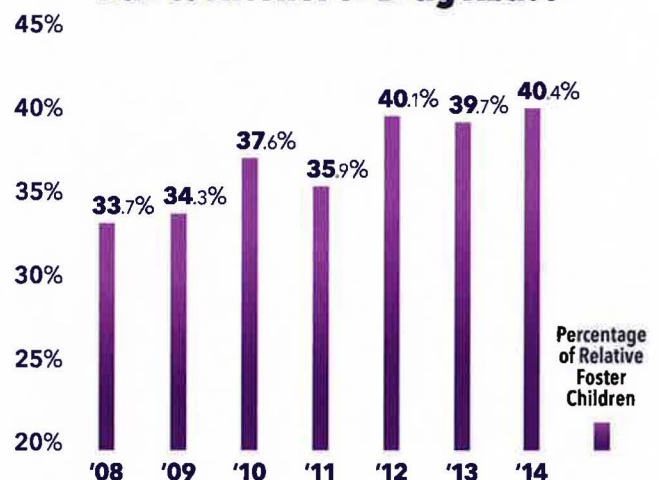

After years of decline in the overall numbers of children in foster care, the numbers are increasing. Experts say the opioid epidemic is responsible for this trend.¹⁸ In 2014, there were more than 415,000 children in foster care, up from about 398,000 children in 2011.¹⁹ The percentage of children entering foster care that had parental drug or alcohol use reported as a reason for removal increased from 22.1 percent in 2009 to 29.7 percent in 2014.²⁰ This is the largest increase of any reason for removal. More than 40% of children in foster care with relatives in 2014 were removed from their parents’ care because of parental alcohol or drug use, up from 34% in 2008.²¹ (see chart)

State-specific data further illustrate how rising heroin abuse is putting pressure on child welfare systems. For example, in Indiana, the Governor linked the increase in children moving through the foster care system to drug use, especially heroin, and hired 113 new caseworkers to help handle the increased load. In Vermont, parental substance use was cited in more than a third of phone calls to the state’s child-protection hotline in 2014. The number of children in state custody there went up 33 percent in one year.²²

Relatives are currently being asked to care for these children more often as the child welfare system seeks to reduce its reliance on institutions and group care settings for children. In fact, 29 percent of all children in foster care are living with relatives.²³ In 2014, about 120,000 of all children in foster care were living with relatives, an increase of over 5 percent since 2008.²⁴ Children are especially likely to end up in the care of relatives when parental alcohol or drug use is a reason for removal. In 2014, more than a third of all children who were removed from their homes because of parental alcohol and drug use were placed with relatives.²⁵

Although the child welfare system has a large percentage of children living with relatives, it is still a very small percentage compared to the total number of children living with relatives. For every child being raised in foster care with a relative, there are 20 children living with relatives outside of the foster care system.²⁶

"After years of decline in the overall numbers of children in foster care, the numbers are rising. Experts say the opioid epidemic is responsible for this trend."

The percentage of children in foster care with relatives has increased from **24% in 2008** to **29% in 2014**. At the same time, placements in non-relative family foster homes and group settings have decreased.

Chris Mathews:

"Grandparents are doing whatever it takes to bring their grandchildren to safety"

A few years after Chris Mathews' daughter got pregnant with her second child, things began to fall apart. With histories of substance abuse, she and her boyfriend began using drugs again. "Soon they were abusing prescription medication and shooting up heroin and anything they could get their hands on," Chris explained. "I made a decision that I couldn't sit by and watch."

But Chris and her partner lived in Florida, a long way from her daughter and two grandchildren, Kenny and Katrina, in Oregon. As a grandparent living in a different state, she made unsuccessful attempts to intervene. Kenny and Katrina persevered through a series of events with Chris' daughter, including continued drug abuse, domestic violence, theft and eventually homelessness.

Finally, after years of instability, Chris' daughter called her for help one day, desperate and homeless. She allowed Chris to bring Katrina, age nine, to live with her and her partner in Florida. Her daughter soon joined them, along with a new boyfriend. Chris helped to stabilize them in a nearby apartment. Later, thanks to Chris' steadfast advocacy, Kenny, who had been left behind in Oregon with his abusive father, came to live with them in Florida as well. Chris did all this while recuperating from a stroke and three heart attacks she had recently suffered.

But Chris' daughter was also battling a bipolar condition that wouldn't be diagnosed for years. She returned to drugs, self-medicating her mental illness. In 2006 she attempted suicide. Soon after, she was arrested for drug possession and jumped her court-ordered probation.

At that point, Chris decided to pursue emergency custody of both grandchildren. She learned about the Kinship Program, part of The Children's Home in Pinellas County. The program helped her navigate the court process to get full custody of the children, secure Social Security funds for them, and connect to support groups.

"I would have lost my mind without the Kinship Program," Chris said. "I have friendships to this day because of it." She also secured employment with the program - first working part-time as Kinship's support group assistant and now working full-time as their outreach coordinator.

Over time, Chris' granddaughter held steady, embraced by the love of the family Chris and her partner provided.

But Mathews' grandson, who was on track to become an Eagle Scout, struggled. "School bullying triggered the trauma and insecurity he endured at a young age," Chris explained, "and he reacted by putting a crude bomb, known as a Molotov cocktail, in the school bathroom." Chris knew he needed more help. With the support of the Kinship Program, Chris fought to keep her grandson out of a traditional juvenile justice facility and found a trauma-informed behavioral treatment program that he attended for several months. Throughout his time there Chris, her granddaughter and partner drove two and a half hours three times a week to visit him and attend family therapy. The combination of this specialized treatment and the stable family his grandmother provided was just what Chris' grandson needed.

"He's 18 now, working at Lowe's full-time," Chris said. "Just this past June, he graduated cum laude. The Army and the Navy are looking at him; we're not sure which he's going to do yet. He's such a good kid, and I'm so proud of him."

"I'm so proud of my granddaughter, too - a lovely young lady. She is 24 and married. We have a great-grandson - we babysit him - and another one due this month. She and her husband both work and support themselves."

Both grandchildren have learned from Chris' modeling how to be consistent and nurturing caregivers. Now they help care for Mathew's partner who has early-onset Alzheimer's disease.

Chris' daughter is also back at home - taking medicine for the bipolar disorder and helping with household chores.

Today, Chris continues to advocate. "I'm constantly telling people to get the kids into therapy; don't let their lives be destroyed by what their parents did and what they've been through. At Kinship, we help with counseling, applying for public benefits, legal services, access to medical care, mentoring, tutors, support groups, transportation, vocational services, substance abuse treatment and more.

"And we're still fighting for grandparents' rights. We can't leave these kids in the situations they're in. The courts are getting much better, but it's taking the legislature too long. Grandparents are doing whatever it takes to bring their grandchildren to safety. We spend all of our savings. We lose our friends. We lose our identity. Work with us to get the financial aid, the legal help, the counseling and everything else we need to do this."

An Overview of the Opioid Crisis

Between 2002 and 2013, rates of heroin overdose deaths have nearly quadrupled.²⁹

Data from the National Survey on Drug Use and Health show that between 2007 and 2014, the numbers of persons who misuse prescription drugs, new users of heroin and people with heroin dependence increased significantly. Opioids are very addictive. They mimic and alter the brain's natural processes for seeking pleasure and removing pain. Significant numbers of heroin users began by abusing prescription opioids like OxyContin, Percocet and Vicodin. In fact about 10.3 million persons reported nonmedical use of prescription drugs in 2014.³⁰ Three out of every four new heroin users report having misused prescription painkillers before taking up the drug.³¹ Rates of heroin use among ages 18 to 25 more than doubled between 2002 and 2013.³²

The opioid epidemic is particularly prevalent among white, middle-class men and women living in non-urban areas.³³ Mental health and substance use disorder treatment, particularly medication-assisted treatment, is less available in rural areas than in large cities, as are doctors and other health care providers in general. Fewer providers mean less treatment

for opioid use disorders and less availability of medications such as buprenorphine and Vivitrol, which are well-established, evidence-based treatment for opioids.³⁴ Funding and support may also be less available in rural areas to train police or other emergency personnel to carry naloxone, a nasal spray that reverses the effects of an opioid overdose. Data show naloxone is administered less in rural areas than in non-rural ones proportionate to overdose rates.³⁵

In 2014, the overdose death rate for both prescription and illegal drugs for whites ages 25 to 34 was five times its level in 1999, and the rate for 35-to-44-year-old whites tripled during that period.³⁶ The death rate for drug overdoses among young African Americans, on the other hand, has edged up only slightly. Studies found that doctors are more reluctant to prescribe painkillers to minority patients, a bias that may account for some of the difference.³⁷ This contrasts with the crack cocaine epidemic of the 1980s/1990s, which disproportionately impacted African Americans.³⁸

Some suggest that the difference in the demographics of those affected by the opioid crisis along with lessons from the past have influenced the response to the opioid crisis in a way that contrasts with that of the crack cocaine epidemic, citing greater efforts to educate the public about addiction as a disease, a less punitive approach from the criminal justice system, and more

rapid community interventions – such as the use of naloxone to help reverse overdoses.³⁹

All substance use – including opioids, crack cocaine, meth, and alcohol – has impacted grandfamilies across races, ethnicities and geographic areas for generations. The impact of each new drug epidemic on families points to the need to provide improved supports and services to the grandparents and other relatives who raise children with little to no formal training on substance use disorders and related challenges.

It is time to improve supports and services for all families impacted by substance use disorders, so that family-serving systems will be more poised to respond to the next epidemic.⁴⁰ While each new drug epidemic brings forth unique challenges, the underlying need for training and support in caring for children affected by parental substance use is ever present.

CRACK COCAINE

At the beginning of the crack cocaine epidemic of the 1980/1990s, the number of children in foster care had increased slightly. By the time the epidemic was ending, the numbers of children in the foster care system had gone up by almost 70 percent, from 276,000 children at the end of 1985 to 468,000 in 1994.⁴¹

Opioid and Other Substance Use Disorders Affect Each Generation in a Grandfamily

Many birth parents with opioid or other substance use disorders have a deep longing to parent. But their desire to be a good parent is severely impacted by their addiction, the effect of opioids on the brain, and the barriers they face finding treatment services and other supports to help them reunify with their children in a safe and stable home. Many parents in the child welfare system have undiagnosed mental health

disorders, such as depression, or have experienced significant trauma or violence that, left untreated, may perpetuate substance use disorders.

The children of parents with substance use disorders also face their own complex issues. They may have health issues that directly relate to their parents' substance use disorder. They may have been prenatally exposed to alcohol or drugs, which can cause temporary or permanent health

and developmental challenges.⁴² They may also have experienced abuse or neglect associated with their parents' use. Early traumatic events, such as exposure to family violence and physical abuse can lead to a greater risk of developing PTSD and substance use disorders.⁴³ Once out of the home, the children may continue to face challenges associated with their trauma histories and uncertainty about their parents' welfare.

"We have friends who are retired who are always telling me about their next cruise to Hawaii. I tell them I go on cruises every day. I cruise to school, I cruise to the doctor's office, I cruise to the skateboarding park. Joey is my 'cruise to Hawaii' and you know what, I wouldn't trade my cruise for theirs."

*- Adrian Charniak,
grandparent caregiver*

The caregivers in grandfamilies impacted by substance use disorders face unique challenges, too. Because the children may have physical or cognitive health challenges resulting from their parents' substance use, caregivers have to both navigate those challenges and access and pay for appropriate health care and developmental services.

Caregivers may suffer from their own mental health issues, stemming from feelings of shame, loss or guilt about their adult child's inability to parent due to their substance use disorder.⁴⁴ Relative caregivers may suffer social isolation and depression because they do not want their peers to know about their situation or because their peers

are no longer parenting.⁴⁵ Caregiver stress may be exacerbated by trying to maintain or navigate an ongoing relationship between the child and parent, often unaware if the parents are currently using drugs or alcohol and how their behavior will impact the child.⁴⁶

Culture Is Prevention: Strengthening Protection From the Opioid Crisis in Native American Communities

Ray Krise feels blessed that he was raised by his grandparents, Steven and Naomi Johns, who took him in as a newborn when his parents couldn't care for him. They all credit their cultural identity for their well-being. In their earlier years, Steven and Naomi strayed far from their tribal roots. But the year before Ray was born they were swayed by the wise man's prophecy which guided them to give up alcohol and begin studying their ancestors' ancient ways so they could pass on their identity and culture. Eventually, young Ray's grandfather became a great spiritual and tribal leader and, from 1965 until his death in 1980, he was an elder in the Native American Shaker Church. His grandmother became known as one of the best fishermen among the Skokomish, a great honor in tribal tradition.

"If not for being raised by my grandparents, I would not have a cultural identity," Krise explains. "I wouldn't know my family lineage and my son would not bear the name Tcha-LQad—a name that is 17 generations old.

"My grandparents raised me in old, traditional ways—no running the streets or going to dances like other kids my age. Instead, I was involved in the spiritual side of life. My passion was going to drum circles and listening to old people talk and perform ceremonies. That helped me develop a real sense of pride and belonging."

The IAMNDN Drug Free Nations program headquartered in the Comanche Nation Prevention and Recovery Center in Lawton, Oklahoma, recognizes the protective effects that come from that sense of pride and belonging. "Culture is Prevention" is the mantra of the IAMNDN movement whose goal is to "bridge the generational communication gap between adults, young adults and teenagers, to inspire and initiate dialogue between younger tribal members and current tribal leaders." Among their efforts, they co-sponsor an annual Native American Summit along with the Substance Abuse and Mental Health Services Administration. The goal is to improve the self-esteem of local youth by building

connections with their culture. In turn, the program seeks to strengthen protective factors in native youth against the impact of substance abuse on native communities.

Recent studies have begun to point to the devastating impact the opioid crisis is having on the Native American population. According to a 2015 report by the Center for Behavioral Health Statistics and Quality (CBHSQ), the rate of non-medical use of prescription pain relievers among Native Americans was 6.9%, which was significantly higher than that among Asian Americans (1.8%), African Americans (3.6%) and Caucasians (4.3%).⁴⁷ Similarly, the CDC's 2014 report on opioid overdose deaths by race shows that Native Americans fatally overdosed at a rate of 8.4%, which was over double and triple that of African Americans and Latinos, respectively.⁴⁸

The adverse effects of historical trauma, discrimination and unresolved grief transmitted from one generation to the next have been shown to be strongly connected to substance use disorders in Native American communities.⁴⁹ At the same time, Indian health resource services are limited, making it difficult to seek quality medical treatment and rehabilitation.⁵⁰

Programs like IAMNDN show promise. They engage community members and leaders and emphasize the importance of traditional culture in combating opioid abuse in Native American communities, an approach that matches particularly well with the strengths of grandfamilies.

Ray Krise understands the power of that culture. Now he is a spiritual leader, speaker and heredity chief, passing the protective traditions on to his children and grandchildren.

For more information on the IAMNDN Drug Free Nations Program visit www.iamndn.org. For more information on additional policy and program efforts to address the impact of the opioid crisis on Native American communities visit <https://www.whitehouse.gov/ondcp/native-americans-and-alaskan-indians>.

"If not for being raised by my grandparents, I would not have a cultural identity. I wouldn't know my family lineage and my son would not bear the name Tcha-LQad- a name that is 17 generations old... [They] helped me develop a real sense of pride and belonging."

- Ray Krise, raised in a grandfamily

Children Thrive in Grandfamilies

Despite challenges, decades of research repeatedly confirms that children who cannot remain with their parents thrive when raised by relatives and close family friends. Children in foster care with relatives have more stable and safe childhoods than children in foster care with non-relatives, with greater likelihood of having a permanent home.⁵¹ They experience fewer school changes,⁵² have better behavioral and mental health outcomes,⁵³ and report that they “always felt loved.”⁵⁴ They are more likely to keep their connections to brothers and sisters, family and community, and their cultural identity.⁵⁵ Moreover, children in foster care with relatives are less likely to re-enter the foster care system after returning to birth parents.⁵⁶ If returning to parents is not possible, relatives are willing to adopt or become permanent guardians.⁵⁷ In fact, 32 percent of all children adopted from foster care are adopted by relatives.⁵⁸

In addition to the many benefits to children, relative caregivers report benefiting from providing this care, often citing an increased sense of purpose.⁵⁹ Birth parents may also value that their children remain connected to family and friends.

“I feel blessed to have this boy in my life. He is a treasure, and most likely, I would not be here without him. He gave me something positive to focus on, rather than the heart-aches and sadness and grief. I have a renewed sense of hope, that I’m doing something worthwhile.”⁶⁰

- Bonnie Martin, grandparent caregiver

Shaheed Morris: "If not for her, who knows how my life might have unfolded"

Drug and alcohol abuse makes people do tragic things. For Shaheed Morris, 28, his mother's addiction to crack cocaine drove her to walk out of a Trenton, N.J., hospital a couple of days after giving birth to him, never looking back. His incarcerated father was not there either.

Shaheed was born with fetal distress related to his mother's drug and alcohol use while she was pregnant. He had no ability to move his neck and head and not much hope for survival. "I'm thankful that my grandmother took the initiative to go to the hospital and claim me," Shaheed said. "Otherwise, I was en route to foster care. If not for her, who knows how my life might have unfolded."

Fast-forward to May 2016, when Shaheed graduated with a journalism degree from South Dakota State University - the first in his family to complete college - and is looking for a job that can build on his freelance reporting experience, as well as his internship with *The Salt Lake Tribune*.

"The impressive thing about my grandmother is that she had already raised my cousin. Now she was raising another grandson," Shaheed said. "Because of the drugs in my system when I was born, I needed a lot of therapy. She had no car so she used public transportation to get me to therapy every day for almost a year. She worked part-time as a custodian at the public schools, but that income was not enough to keep up with the expenses of a baby with special medical needs. So, with only a 5th grade education, she found a way to piece together the support she needed.

She secured critical help from what was then the AFDC program, Food Stamps, the WIC (Women, Infants, and Children) program and public housing.

"It was not easy for my grandmother to raise a child with serious needs while she was in her early 60s with little support," Shaheed said. "We need more support for grandparents like her who step up to care for us.

"I was fortunate. Along with my grandmother, I had a lot of mentors who helped me navigate. Somehow, I managed to graduate from high school. I realized, when I started reading a lot of books, that many people had higher levels of education. I got tired of working low-paying jobs - couldn't afford a car or go on trips or move up the social ladder. So, I researched and found South Dakota State where I could accrue less than \$30,000 in debt."

Today, Shaheed is still close with his 89-year-old grandmother and the mentors who helped guide him to move beyond his circumstances.

"Now I tell kids to seek mentors in various forms and fashions, as well as various ethnicities. Find something you want to do in life - be passionate and work hard at it. And to grandfamilies who step up in challenging times, I will continue to advocate for you."

Shaheed is also in the process of writing his first book. He is an active member of the National Association of Black Journalists.

"It was not easy for my grandmother to raise a child with serious needs while she was in her early 60s with little support. We need more support for grandparents like her who step up to care for us."

- Shaheed Morris, raised in a grandfamily

More than **1/3** of all children placed in foster care because of parental substance abuse are placed with relatives.

Supporting Grandfamilies Helps Children Thrive

"I would have lost my mind without the Kinship Program. They helped me navigate the court process, secure Social Security for the children, and connect to support groups. When my grandson got in trouble they helped me fight to keep him out of a juvenile justice facility and get him the treatment he needed. Now he is working full time and recently graduated cum laude."

- Chris Mathews, grandparent caregiver

Whether inside or outside the child welfare system, grandfamilies are in need of support. Many of the caregivers are over 60, retired or living on a fixed income. Nearly one in five lives below the poverty line.⁷² Thrown into their caregiving role with little or no warning, caregivers are often not even aware of supports and services for which their families may be eligible, such as housing or child care assistance, Temporary Assistance to Needy Families or SNAP (formerly known as the Food Stamp Program).⁷³ At the same time parents of the children both inside and outside the foster care system often face challenges accessing substance use disorder treatment, mental health and other services to help them safely parent again or to prevent the need for the children to be removed and placed with relatives in the first place.

Grandparents and other relatives raising children outside of foster care are often struggling with even less support than those in the formal system. They do not have access to the same level of monthly financial support or other support services. Moreover, many caregivers outside the system may have serious challenges enrolling the children in school, consenting to health care or accessing health records if they lack a legal relationship to the children.⁷⁴

Both within and outside the system, there is a dearth of trauma-informed services to help children heal from the experience of living with a parent with a substance use disorder and the trauma of separation from their parents. Moreover, training for dealing with this trauma and other caregiving needs is typically only available to relatives involved in the child welfare system. Yet it is usually not designed with grandfamilies in mind and does not take into consideration the unique circumstances and loyalty issues facing these families.

Research shows that when caregivers in grandfamilies receive services and support, children have significantly better social and mental health outcomes than children of caregivers who do not receive services and support.⁷⁵ Examples of services and supports that demonstrate improved outcomes include support groups, mental health services, case management, and kinship navigator programs. Navigators provide a single point of entry for learning about housing, household resources, physical and mental health services, and financial and legal assistance. Research also shows that families receiving support from such programs experienced increased permanency and stability, improved safety, lower rates of foster care re-entry, reduced behavioral problems in children and youth and increased caregiver strengths.⁷⁶

Through the Ups and Downs: Utah Grandfamilies Program

Seven years ago, Ron and Felecia got the call. Their daughter, suffering from heroin addiction, was going to jail for drug possession. Their struggles were twofold. They had a grieving 3-year-old granddaughter, Harper, to raise and comfort. They were also grieving for their daughter and a new situation they hadn't planned on. Harper is among the more than 17,000 children in Utah whose relatives are raising them.

Ron and Felecia's story resonates with many of the 800 grandfamilies, 40 percent of whom are affected by opioid misuse, that the Children's Service Society (CSS) of Utah helps annually. Their Grandfamilies program – operating in Salt Lake, Davis, Weber and Cache counties – helps these families access grants and helps relative caregivers become legal guardians.

Besides crisis prevention services, the program provides services such as Grandfamilies First Class, Friend 2 Friend and Children's Groups. Grandfamilies First Class is a 10-week series for grandparents and other relatives raising children that meets weekly throughout the year. "We talk about the legal issues and establishing boundaries with their adult children," said Bacall Hincks, program coordinator with Grandfamilies. "We discuss what substance abuse is and how it's a disease."

In the Children's Groups, held at the same time as Grandfamilies First, children ages 4 through 11 engage in psycho-social classes led by trained professionals. "We also do age-appropriate substance abuse discussions with them," Bacall explained. "We discuss emotions, coping strategies and how to manage their anger because a lot of them are angry. They've seen abuse and have been neglected."

Once those families complete the group sessions, they join Friend 2 Friend, an activity and support group that hosts events like Easter egg hunts and parties for Christmas and Halloween. Families in this group get free tickets to sporting events and

other community activities. This group especially helps grandparents whose retired friends can't relate to their living situation. Bacall said, "This is an opportunity for these families to create a peer network and support one another."

That support can be a family saying, "My daughter messed up and relapsed again," and another family saying, "So did mine, and it's OK. We'll get through this together."

It's that support that helps sustain Ron and Felecia, Harper's grandparents who took her in when she was three years old. She's now 10. Her mother was recently arrested again on drug possession. Harper wants her mom to get better, especially after watching her schoolmates whose parents are in their lives.

Bacall said elected officials should know that even though they work with grandfamilies, it's important not to exclude the parent who's suffering from addiction.

"That parent is still a parent to their children," she explained. "We have to do our best to try to reunify them with these kids so that grandma and grandpa can go on being grandma and grandpa, and mom and dad can become mom and dad again."

But not every grandparent goes back to being grandma or grandpa. For them, Bacall said, it's important for the Senate to pass the Family First Prevention Services Act, which supports grandfamilies. Funding for grandfamilies will not only help families access community resources, it will also provide specific therapeutic supports and other preventative services designed to keep families together.

"These families don't just deal with the drug abuse once and then it's over," she explained. "That's what's so important about our program. We have that on-going support for families. We're able to be there for them when these ups and downs occur."

**Names were changed to protect the family's privacy.*

Grandfamilies Programs Report Service Needs in Response to Opioid Use

A survey of programs across the U.S. that primarily serve grandfamilies raising children outside of the foster care system revealed that the opioid crisis is having a significant impact on the children and families. Almost all of the responding programs reported serving families impacted by parental alcohol or drug use. More than 70 percent identified opioids, including heroin, as one of the most common types of drugs impacting the families. The services most frequently requested and used by grandfamilies impacted by substance use were: kinship navigation services, mental health services and financial assistance / counseling, pointing to a strong need to further develop and expand these services. Families also made frequent use of support groups and often requested legal assistance and respite care. Reported barriers to accessing services included: transportation and scarce availability of services in rural areas, limited eligibility criteria, issues with the children's birth parents, reading and comprehension issues, and poor relationships with child welfare agencies.⁷⁷

Policy and Program Recommendations

While the impact of the opioid epidemic is still being uncovered, the effect of parental substance use disorders on children and caregivers in grandfamilies is not a new challenge. Each new drug epidemic points to the need to provide improved supports and services to the children and to the caregivers who often step in to care for the children with little to no formal help. The following are recommendations for policymakers, advocates and professionals serving children, caregivers and parents in grandfamilies affected by substance use disorders:

Reform Federal Child Welfare Financing to Encourage a Continuum of Tailored Services and Supports for Children, Parents and Caregivers in Grandfamilies:

- ▶ **Prevention and Post Permanency Services** - Allow states to use federal child welfare funds for trauma-informed prevention services for families of eligible children in grandfamilies. Eligible children should include children who are candidates for foster care, identified by the state as being at imminent risk of entering or re-entering foster care, but who can safely remain at home or with a relative caregiver if provided services. Relative caregivers and parents of the children should also be eligible for relevant services. Such trauma-informed services should be shown to improve outcomes for children and include: mental health treatment, substance abuse prevention and treatment, and in-home parent skill-based supports as proposed in the Family First Prevention Services Act.⁷⁸
- ▶ **Kinship Navigator Programs** - Research shows kinship navigator programs successfully link grandfamilies – including those impacted by parental substance use – to services and supports they would not otherwise receive.⁷⁹ Generations United recommends reauthorizing Family Connection Grants under the Fostering Connections to Success and Increasing Adoptions Act of 2008 and allowing states to receive reimbursement from federal child welfare funding for state kinship navigator services provided to grandfamilies as included in the Family First Prevention Services Act.

Ensure Children in Foster Care Are Placed With Families, Prioritize Placement With Relatives and Give Them Support to Care for Children With High Level Needs:

Consistent with the principle that children do best in families, enact the Family First Prevention Services Act, which encourages the placement of children in foster care in the least restrictive, most family-like settings appropriate to their needs. Moreover, in line with current federal law, first

look for relatives who can serve as the best possible family homes for children whose parents are unable to raise them due to a substance use disorder or other child welfare issues. Families should be given the services and supports they need to care for the children who often come with high-level emotional, behavioral and/or physical health challenges.

Promote Services to Grandfamilies Through the Network of Organizations Serving Older Americans:

Urge all states to maximize use of the National Family Caregiver Support Program (NFCSP). NFCSP funds may be used to provide supportive services to children and caregivers in grandfamilies where the caregiver is age 55 or older, regardless of child welfare involvement or if the child is a candidate for foster care. Among the services are those that are helpful to grandfamilies impacted by substance use including support groups, counseling, respite care, training, and even direct legal services. Although up to ten percent of the program's funds can be used for grandfamilies, most states do not make full use of this program to help support these families.

Ensure Grandfamilies Can Access Financial Assistance to Meet Children's Needs:

Access to Temporary Assistance for Needy Families (TANF) must be improved through a number of concrete policy and program steps including allowing for each child on a TANF child-only grant in a family to receive the same amount of assistance, eliminating asset tests for caregivers over age 60 so they can have savings for retirement, and streamlining the application process. To prevent entry into foster care, time-limited financial support should also be made available through federal child welfare funding.

Provide an Array of Legal Options to Grandfamilies by:

- ▶ **Educating Relatives on the Full Range of Legal Options and Improving Their Access to Legal Assistance** - Ensure that all grandfamilies impacted by parental substance use disorders, whether inside or outside the foster care system, have access to a continuum of legal relationship options and that they understand the differences – both legal and practical – of adoption, guardianship and legal custody. As part of this effort, grandfamilies' access to legal representation and assistance must be improved and expanded. Furthermore, all states should enact educational and health care consent laws so that children outside the foster care system and without a legal relationship to their caregivers can access educational and health care services.
- ▶ **Identifying and Engaging Relatives From the Beginning** - Involve relatives as soon as children come to the attention of the child welfare system, starting with their identification and notification and continuing to engage them throughout. Ensure that relatives know they have options that range from becoming licensed foster parents for the children to offering homes the children can visit and that they understand the benefits and challenges of each option. Child welfare agencies should inform relatives that if they become licensed foster parents and if the children cannot return to their parents, the children may be eligible to exit foster care to adoption or permanent guardianship with

them and receive adoption subsidies or Guardianship Assistance Payments (GAP) if their jurisdiction offers GAP. States that do not offer GAP should adopt the program.

- ▶ **Addressing Barriers to Foster Family Home Licensure** - Adopt the Model Family Foster Home Licensing Standards, which Generations United developed with the National Association for Regulatory Administration and the American Bar Association Center on Children and the Law, with support from the Annie E. Casey Foundation, to eliminate unnecessary barriers that prevent suitable relatives and non-relatives from becoming licensed foster parents.

Elevate and Promote Best Practices Through a National Technical Assistance Center on Grandfamilies:

Create a National Technical Assistance Center on Grandfamilies that engages experienced experts to provide a clearinghouse of best or promising practices and programs for serving children, parents and caregivers in grandfamilies. This includes guidelines for states to encourage best practices to support grandfamilies impacted by parental substance use, including ways to help caregivers meet the children's needs and support birth parents' access, engagement and success in treatment. The Center can facilitate learning across states and provide technical assistance and resources to those who directly work with children, caregivers and parents in grandfamilies.

RESEARCH CONFIRMS POSITIVE OUTCOMES OF KINSHIP NAVIGATOR PROGRAMS

Two rounds of Family Connection Grants, authorized by the Fostering Connections to Success and Improving Adoptions Act of 2008 (Fostering Connections Act), have funded several kinship navigator programs, which have resulted in many positive outcomes for grandfamilies. According to a report⁸⁰ about these programs by the Children's Bureau of the U.S. Department of Health and Human Services, positive outcomes for those receiving kinship navigator services included:

- **SAFETY**: Relative caregivers receiving navigator services achieved identified safety goals for their families.
- **PERMANENCY**: Children in the care of relative caregivers receiving navigation services had higher rates of permanency through legal guardianship and reunification with parents.
- **WELL-BEING**: Results showed that kinship navigator programs were successful at ameliorating the needs of grandfamilies.

The five year evaluation of Florida's 2012 kinship navigator grant was recently published⁸¹ and shows further compelling results for its nearly 3000 participants:

- **LOW RATES OF RE-ENTRY**: 99 percent of participants' children did not enter the child welfare system at the 12 month follow-up, showing placement stability and child safety.
- **COST-SAVINGS**: Cost of the program is less than half the costs associated with adjudicating a child dependent. Non-relative foster care is 6 times and residential group care is more than 21 times as expensive as the navigator program.

Generations United's National Center on Grandfamilies is a leading voice for issues affecting families headed by grandparents and other relatives. Through the Center, Generations United leads an advisory group of organizations, caregivers and youth that sets the national agenda to advance public will in support of these families. Center staff conduct federal advocacy, provide technical assistance to state-level practitioners and advocates, and train grandfamilies to advocate for themselves. The Center raises awareness about the strengths and needs of the families through media outreach, weekly communications and awareness-raising events. It offers a broad range of guides, fact sheets and tools for grandfamilies, which cover issues from educational and health care access to financial and legal supports and can be found at www.gu.org.

Acknowledgments

Generations United gratefully acknowledges the following dedicated individuals and organizations whose work and support made this report possible:

- ▶ *Chris Mathews, Shaheed Morris, Ray Krise and the Grandfamilies Program of the Children's Services Society of Utah for sharing their stories;*
- ▶ *Generations United's Ana Beltran, Jaia Peterson Lent and Adam Otto for authoring and contributing to this report, Carolyn Walsh and Sydney Franklin for compiling research, Cathy Jenkins and Alan King for conducting interviews and writing personal stories and program profiles, and Donna Butts and Sheri Steinig for their review;*
- ▶ *Children & Family Futures for providing data and a detailed review of the report;*
- ▶ *The Brookdale Foundation Group for sending a survey on substance use out to their RAPP network;*
- ▶ *Rebecca Robuck and Jennifer Miller of ChildFocus, Heidi Epstein of the American Bar Association Center on Children and the Law, and Generations United GrAND members Joan Callander Dingle, Sharon Olson, Dolores Bryant and Sarah Smalls for their review and feedback.*

Finally, we extend our gratitude to The Brookdale Foundation Group, Dave Thomas Foundation for Adoption and Verizon Foundation whose support made this project possible.

28. Generations United calculated this figure based on the federal share of the 2011 national average minimum monthly foster care maintenance payment (\$301) for 1.1 million children. The number of children is approximately one-half of the children being raised in grandfamilies outside of the formal foster care system. We use this number in our calculation due to a conservative estimate that the other half already receives some type of governmental financial assistance, such as a Temporary Assistance for Needy Families (TANF) child-only grant. We also know that a number of children in grandfamilies have special needs that would warrant higher monthly foster care maintenance payments. The cost of 1.1 million children entering the system would represent all new financial outlays for taxpayers.

United

Because we're stronger together*

Your gift to your grandchild is yourself.

When you raise your children's children, you give unselfishly — love, time, talents and personal resources. You keep your family intact and become a stabilizing force for children whose lives are often full of uncertainty. Be proud of your accomplishments!

Grandparenting is complex, often difficult and charged with emotion. It calls for wisdom, strength and flexibility. Every generation is different than the one before, and often these differences create challenges to communication and understanding. Love and patience go a long way in meeting these challenges. Often, adults remember their grandparent as one of the most influential people in their lives. Grandparents shield the child from harm, give the child hope and encouragement, and hold them close to their heart. Grandparents bridge the future with the past.

Parenting your Children's Children

Help for those raising others' children
Parenting Series

You didn't expect to be parenting again...

More and more grandparents from all social, economic and ethnic groups are caring for their grandchildren or great-grandchildren, and relatives are caring for their nieces and nephews or other relatives. Sometimes they are unprepared to take on these new responsibilities. Sometimes they are resentful or angry. And sometimes they just need what any caregiver of children needs – information and support. Here are some common concerns you may have:

- **Physical stress.** The energy level of children can be challenging for anyone, but if grandparents have physical illness of their own, it makes raising a child even more demanding. Lifting, changing, bathing and feeding infants and toddlers is tiring. Older children need supervision, help with homework, additional food, cleaning and laundry, and transportation to activities.
- **Financial stress.** Many grandparents are on a fixed income, and do not receive any money from the children's parents. Insurance, food, clothes and educational expenses can cause serious financial burdens for grandparents.
- **Legal issues.** Grandparents must decide whether to seek legal custody, guardianship or adoption of the child for whom they are caring. This can cause disagreements within the family when courts are involved.
- **Emotional stress.** Children bring with them strong emotions – loving your grandchild does not mean you don't feel angry or resentful at times. You may worry about your grandchild's behavior and development, or you may be angry or hurt by your own child's actions.
- **Parenting concerns.** It is easy for grandparents to become overwhelmed with discipline and other parenting issues. The world has changed since they were parents and, though many behavior problems are common regardless of generation, societal changes can cause confusion or difficulty.
- **Time constraints.** As a grandparent raising grandchildren, you can overextend yourself with too many activities. You are unselfishly giving your love and energy and personal resources to once again raise children. This takes enormous commitments of your time – and you also need time for yourself.

And the world seems so different than when your own children were small.

Here are some tips for doing your best as a grandparent:

- **Understand your grandchild's needs.** Not only are you raising a child you never planned for, you may also be raising a child with multiple problems. The child may not have had a good start in life, and may be anxious and insecure. He may have trouble trusting anyone and need constant reassurance and nurturing. Consistency, nurturing and acceptance will go a long way in helping your grandchild feel secure and loved.
- **Learn about child development and discipline techniques.** Attending a parenting class, parenting or family support program or other information session can give you new ideas about how to communicate with the child. You can practice skills like praising your grandchildren, setting and enforcing rules, and stating your expectations with other parents and grandparents in classes and groups.
- **Consult an attorney for advice on custody, guardianship and other legal concerns.** These are among the most sensitive and complicated issues facing grandparents. Look for a lawyer who has experience with child welfare law and custody issues. Choose one that you feel comfortable with and who listens to your concerns. Recommendations from friends, listings from the local bar association (a lawyers' group) and courts are a good place to start; many communities also have legal clinics that provide low or no cost help to grandparents in custody cases.
- **Confront financial issues with information.** Keep good records of your assets and liabilities. Important documents should be kept in a safe location, either a safe deposit box or with a friend or attorney. Public assistance programs are available everywhere, and can help you with the added burdens of caring for children. Community agencies for older persons can help with referrals to programs.
- **Ask for help!** Caring for your grandchildren can be overwhelming and frustrating. Asking for help from family members, neighbors, or community agencies is a sign of strength. You do not have to do everything alone, but often others do not know how to help unless you ask them. You are not alone!
- **Take care of yourself.** You need and deserve respite from your child care responsibilities; arrange child care you can trust, perhaps you can "trade kids" with another grandparent. Time spent away from the children can revitalize you and help you feel less stressed. Taking care of your personal business helps you feel in control of your life and decreases daily pressures. Learning to relax and handle stress is an important way to help yourself so you can help your grandchild.
- **Don't speak negatively about the child's parents.** Children love their parents, even when parents make mistakes. Find some good in the parents and let the child know it is all right to love both you and their parents.

Kinship Care...

Kinship Care

Private kinship care (informal):

- Child living with a relative because of a private agreement between the relative and the birth parent; no child welfare agency involvement.

Voluntary kinship care:

- A family becomes involved with a child welfare agency, agency suggests child moves in with kin without taking custody.

Kinship foster care:

- Child welfare agency takes custody after child maltreatment investigation; child is placed with a child welfare agency-approved relative caregiver

Kinship Care (Cont'd)

- Parental substance abuse/mental illness
- Child abuse or neglect
- Family violence
- Parental incarceration
- Parental military service
- HIV/AIDS

Kinship Care (Cont'd)

GRANDPARENTS RESPONSIBLE FOR GRANDCHILDREN (2015)

2,631,546 Grandparents are responsible for grandchildren ⁶⁴

In Pennsylvania, there are 92,944 grandparents responsible for grandchildren (2015)

Kinship Care: Outcomes for Children

Children in foster care who are placed with relatives, compared to children placed with non-relatives:

- have more stability (fewer changes in placements),
- Have fewer school changes
- have more positive perceptions of their placements,
- are more likely to be placed with their siblings,
- are less likely to re-enter care,
- and demonstrate fewer behavioral problems

State and Federal Policies to Support Kinship and Relative Caregivers

Casey bill would aid grandparents raising grandkids amid opioid epidemic

- By Eric Scicchitano The Daily Item
- May 13, 2017
-

Legislation introduced in the U.S. Senate aims to form a plan to help grandparents raising grandchildren, a trend on the rise amid the ongoing nationwide opioid and heroin epidemic.

Introduced by Pennsylvania Democrat Bob Casey and Maine Republican Susan Collins, chairman of the Senate Special Committee on Aging, the Supporting Grandparents Raising Grandchildren Act would create a federal task force.

The task force would inform grandparents on issues they encounter when unexpectedly returned to a parenting role: navigating the school system, addressing mental health issues and seeking out social and support networks.

Members would include the Secretary of the U.S. Department of Health and Human Services and the U.S. Attorney General among other experts. They would be required to produce reports to Congress on their findings both about best practices to support grandparents and any identified gaps in resource needs for grandparents raising grandchildren.

“The opioid crisis is not only straining families, communities, law enforcement and health care systems, but it also presents new challenges for older Americans,” Sen. Casey said. “As older Americans respond by stepping in to care for their grandchildren, this legislation is designed to say that you are not alone and that we have your back, with a focused federal effort to providing the information and supports grandparents need.”

An estimated 2.6 million children are being raised by grandparents, a number on the rise as a result of their parents’ heroin and opioid addictions, according to a 2016 report from Generations United, a family research and advocacy group.

Generations United found 2 in 5 foster care children were removed from their homes because of parental substance abuse. For every child in foster care placed with relatives, 20 others are being raised by relatives outside the foster care system, the group reports.

Glenda Bonetti, director of Northumberland County’s Drug and Alcohol Program, said assistance to grandparents who become primary caregivers for grandchildren in the current drug epidemic is “long overdue.”

Bonetti said she believes a stipend should be paid to help support these grandparents.

“Grandparents are putting aside their needs to raise them because they don’t want them in the system. However, they struggle because they become the ‘parent’ and not the grandparent who is to spoil them and send them home,” Bonetti said.

“According to Children and Youth, unless a person goes through formal kinship care, they are not financially compensated. Grandparents are using their retirement and other savings to raise these children,” she said.

The federal legislation was introduced Wednesday and referred to the Committee on Health, Education, Labor and Pensions. At the same time in the State Capitol in Harrisburg, Sen. Gene Yaw, R-23 Williamsport, led a forum hosted by The Center for Rural Pennsylvania on the topic.

The hearing addressed concerns about custody and social services along with the state's "kinship care" law. Debbie Friday, of Indiana, Pa., testified a change to the existing law is needed to allow grandparents to receive foster care payments without becoming foster care parents or pursuing full custody through the courts.

Among the complexities, Friday said, are stringent foster care requirements, confusing legal hurdles, and reluctance among parents who don't want to add to the friction within the family by suing their children for custody.

Brian Bornman, executive director of Pennsylvania Children and Youth Administrators, testified Wednesday and said grandparents caring for grandchildren, rather than foster care placement, saved upward of \$39 billion annually nationwide.

"The benefit of grandparents providing care for their grandchildren should not be underestimated," Bornman said during the hearing.

KINGSTON —Brenda Saba of Kingston Township adopted her 9-year-old grandson two years ago because her son could not care for him due to his drug addiction.

She is raising her grandson with her husband, attorney David Saba.

They are among a growing number of grandparents raising their grandchildren as a result of the child's parents' opioid addictions.

The couple, who are in the Grandparents Raising Grandchildren support group, met with U.S. Rep. Lou Barletta, R-Hazleton, on Tuesday at Saba's law office in Kingston to talk about the issue, which has become more prevalent in Northeastern Pennsylvania.

Saba said she has been dealing with her 33-year-old son's addiction for 19 years.

WARREN RUDA / THE CITIZENS' VOICE U.S. Rep. Lou Barletta, R-Hazleton, met with Grandparents Raising Grandchildren, a group of grandparents who are raising their grandchildren as a result of the child's parents' opioid addiction on Tuesday in Kingston.

- Perschau, Elizabeth J.
- Vincent, Martha Rose

Her son spent 18 months in federal prison, was involved with a woman who also was a heroin addict and their first grandchild was conceived under the influence of heroin, Saba said.

Her grandson has a brother and sister, who are being raised by two other sets of grandparents, she said.

Her son was recently released after serving more than two years in state prison.

She said he relapsed and she hasn't heard from him.

In the meantime, her grandson wakes up each day without his brother and sister, not knowing where his mother is and thinking his father is in jail, she said.

"That's how he has started every day of his life since he was 18 months old," Saba said. "In our case, both mom and dad are gone and both mom and dad are addicts."

Barletta has been involved in a push for new laws attacking the growing opioid epidemic, including legislation he sponsored which specifically protects babies born into addiction and ensures they are released to a safe environment. The legislation requires that states which receive federal funds for child protective services comply with federal law and enact certain guidelines for the welfare of children exposed to opioids.

Saba said she thinks legislation should be expanded to include more assistance for children such as her grandson and his two siblings — who are at a high risk for becoming addicts — as well as grandparents raising grandchildren who have parents with drug addictions.

She was joined by Joan Gower, adoption case worker for Catholic Social Services, who said children in such situations suffer tremendous grief and loss. Many grandparents cannot afford the therapists the children need, she said.

Pittston resident Beth O'Boyle, who is raising her 9-year-old grandson with her husband, also attended the meeting. She said her son also suffered from a drug addiction and while they don't need financial assistance, other grandparents do.

"I would like to be a grandparent who has a voice for what we are all going through," she said.

Barletta said he will co-host a forum on the opioid problem with state Rep. Ron Marsico, R-Harrisburg, on Thursday in Harrisburg, where he will bring up the issue.

"I'm going to work on that to take this a step further than I took it," Barletta said. "But, we needed to take that first step. States have to make sure that these babies are put in a safe environment."

Before passage of the legislation he sponsored, Barletta said there was no help for babies born into addiction and he thought that should be the first priority.

Every 25 minutes, a baby is born addicted to opioids and is already suffering from withdrawal, Barletta said.

"That infant did nothing wrong and was born into this world as an addict. We have to make sure that baby is safe," Barletta said. "We have to address there is an epidemic in this country."
